708.07, Corrugated Polyethylene Drainage Pipe

Qualification Requests

On the laboratory test report that is sent in with the request, the test data must show that the material is in compliance with the material requirements.

Qualification Procedures

The requirements for test reports that are received for QPL prequalification are as follows.

- The producer will submit test reports for the Corrugated Polyethylene Drainage Pipe.
- MDT will ensure that the product meets the tests outlined in subsection "708.07 Polyethylene corrugated Drainage Pipe or Tubing". The material will be rejected if the material does not meet the requirements.

Material Requirements

Requirements may be found in the Standard Specifications for Road and Bridge Construction subsection 708.07, the Supplemental specifications to Montana Standard Specifications subsection 708.07, or contract Special Provisions.
