

PROPOSED DRAFT
FEBRUARY 2015

620.03.7 Final Pavement Markings

For markings on seal coats and concrete, apply final pavement markings a minimum of 30 calendar days, and a maximum of 45 calendar days, after concrete is placed or after seal coat operations through initial sweeping are completed. When final pavement markings are the only remaining item of work on the project, contract time assessment will be suspended until either final pavement marking application begins, or until 45 calendar days elapse after seal coat operations are completed or concrete placement is completed. The Project Manager may extend the 45 days due to holidays or inclement weather that prevent the application of final pavement markings.

For markings on 3/8-inch plant mix, apply final pavement marking immediately following the completion of mainline paving.

COMMENTS

1. You may want to look at having a cure time for 3/8" PMS. Black tends to bleed into the paint when applied immediately. From my experience.

Response: Agreed,
