

## **713.03, Chlorides**

### **Qualification Requests**

On the laboratory test report that is sent in with the request, the test data must show that the material is in compliance with the material requirements.

### **Material Requirements**

Chlorides must meet the requirements listed in the Standard Specifications for Road and Bridge Construction subsection 713.03. Also look in the Supplemental specifications to Montana Standard Specifications subsection 713.03 or contract Special Provisions.

### **Qualification Samples**

The requirements for samples that are received for QPL prequalification are as follows.

- ◆ The producer will submit a minimum of two 1 quart samples for each type of Chloride to be considered along with test results from an independent laboratory.
- ◆ MDT will test each sample according to the tests outlined in subsection "713.03 Chlorides". The material will be rejected if the material does not meet the requirements.
