

METHODS OF SAMPLING AND TESTING
MT 601-13
MATERIALS SAMPLING, TESTING AND ACCEPTANCE GUIDE

1 Scope:

This procedure is intended to assist in determining the basis of sampling, testing, inspecting, and accepting various materials and products commonly used on highway projects.

Within this procedure is a table informing the user what tests may be performed on a particular material; the sample size; rate and frequency of sampling; responsibility for sampling, testing, collecting certification, or visually inspecting the material; and special instructions or information.

2 General:

Listed in MT 601 are various materials, the basis of acceptance may vary depending on the specifications, procedures or circumstances relating to these materials.

The MT 601 Table is divided into material categories, such as Aggregate, Aggregate Surfacing, etc. The user is able to click on a category to expose a table containing materials that fall within that category. Tables contain:

- Name of material hyperlinked to its pertinent specification section.
- The majority of materials will contain a material code that corresponds with SiteManager. This is also hyperlinked to its pertinent specification section.
- Tests that are routinely performed on materials for project acceptance. When possible, tests are hyperlinked to their procedure.
- Sample size required to perform the testing.
- Rate and frequency samples are to be taken.
- Responsible party for witnessing/collecting samples, collecting certifications, visually inspecting material and/or testing material
- Notes containing special instructions or information

3 Material Acceptance Methods:

- Sample/Test Results: Utilized when only test results are required to verify material quality
- Sample/Test Results and Certification: Utilized when test results and certification and/or visual inspection are required to verify material quality
- Qualified Products (Approved Materials): Utilized for materials that have been approved on MDT's QPL
- Certification/Visual Inspection: Utilized when there is only a certification and/or visual inspection required
- Final Record: Sample and tests taken from completed portions of a project to spot check the results obtained for contract compliance
- Pre-Inspection: Utilized for materials tested and inspected prior to project delivery
- Mix Design: Utilized for the approval or verification of material properties and mix proportions

3.1 Sample/Test Results:

Assure that the material to be incorporated into the work is sampled at the appropriate interval and the contractor is responsible for taking a representative sample when applicable.

All major items to be sampled and tested are listed by category with instructions for sample size, rate/frequency of testing, sampling/witnessing and testing responsibility, and any special instructions. Whenever a conflict exists between a particular test method and MT 601, MT 601 will govern.

Acceptance - Department personnel or an authorized representative will witness samples taken by the contractor.

Quality Assurance (QA) – Perform sampling for QA according to the Montana Materials Manual of Test Procedures, [Montana Standard Specifications for Road and Bridge Construction manual](#) and any applicable [Supplemental Specifications](#) for the item to be sampled. Department personnel or an authorized representative will witness samples taken by the contractor.

3.1 Sample/Test Results: (continued)

Independent Assurance (IA) - The Department requires all witnessing/sampling and testing for Independent Assurance purposes be accomplished by Department personnel or authorized representatives. IA samples must be taken under the direct supervision of the Materials Supervisor or their authorized representative and must not be scheduled on such an inflexible and regular routine that its frequency can be predicted, but sufficient samples must be submitted to satisfy the frequency intended. There are two types of IA's; Comparison Testing and Procedural Checks. Independent Assurance is highlighted within the tables in blue. Specifics on the IA procedure can be found at the following link: [MT 602 Acceptance, Independent Assurance and Final Record Sampling](#).

3.1.1 Small Quantity Items:

Projects requiring only small quantities of materials may not require standard acceptance sampling and testing. Items such as Commercial Plant Mix under 500 tons, paint under 25 gallons and minor quantities of concrete are examples. When items are designated as small quantities by the Project Manager, their acceptance will be based upon proper documentation, such as concrete mix design approvals, air and slump test results, aggregate gradation results, etc. The Project Manager will document in SiteManager (in the Contract Sampling and Testing window) the reason items or materials are accepted on small quantities. Buy America requirements apply to items designated as Small Quantities.

3.1.2 Optional Samples:

All materials incorporated into the project, whether represented by actual samples or by certification, are subject to final field inspection and acceptance by the Project Manager. MDT's Project Manager has the option to obtain more than the required minimum number of samples and to submit as many additional samples as deemed necessary to ensure conformance to specifications.

3.1.3 Maintenance Samples:

Assure the material to be incorporated into the work is sampled at the appropriate interval and/or certification of materials provided meet requirements of the maintenance contract.

3.1.4 Preconstruction Samples:

Samples taken prior to contract work beginning for the planning and developing of construction projects.

3.2 Sample/Test Results and Certification:

Assure that the material to be incorporated into the work is sampled at the appropriate interval and the contractor is responsible for taking a representative sample. Contractor provided certification of material is required for project acceptance.

3.3 Qualified Products (Approved Materials):

The Materials Bureau maintains the Qualified Products List (QPL). MDT confirms the materials appearing on the QPL meet the specifications described in the product specific item. Some materials may be accepted through the QPL or by product specific testing. Materials that are required to be on the QPL are highlighted in yellow within the table. Specifics on the QPL program can be found at the following link: [MDT's Qualified Products List](#).

3.4 Certification/Visual Inspection:

Acceptance of an established product may be made by the field, based on Certificate of Compliance (Cert of Comp) or Product Data Sheet (Data Sheet), visual inspection of the material's condition and/or previous satisfactory field performance. When a Cert of Comp or Data Sheet is required, the inspector must verify that the material received matches the Cert of Comp or Data Sheet and meets the contract requirements.

3.4 Certification/Visual Inspection: (continued)

- **Certificates of Compliance** – state the material meets the contract requirements. A manufacturer's authorized representative **must sign** the certificate. Clearly identify each lot of certified materials or assemblies delivered to the work in the Certificate of Compliance. Materials or assemblies used on the basis of Certificates of Compliance may be sampled and tested at any time. Materials not meeting contract requirements will be rejected.
- **Product Data Sheets** – describes the mechanical, thermal, physical, chemical, and specific properties of the product. Product Data Sheets must contain relevant standards, test methods, and results for applicable materials and subcomponents showing products to be in compliance with contract requirements.

3.4.1 Buy America:

Products containing steel that will be permanently incorporated into projects must meet the requirements of Subsection 106.09. To facilitate contract administration, products have been broken into two categories:

- Items designated as Category 1 require supporting documentation showing all steps of manufacturing as being completed in the U.S. This includes the Mill Test Report from the original producing steel mill and certifications documenting the manufacturing processes for all subsequent fabrication, including coatings.
- Items designated as Category 2 must have all manufacturing processes completed in the U.S.; however, to address concerns with excessive documentation, products may be certified as domestic by the fabricator. Certification by the fabricator must consist of a statement that all materials have been melted and manufactured in the U.S. and are required to be signed by a fabricator representative. The Department reserves the right to request additional information and documentation to verify accuracy of statement.

Material requirements for Buy America program are highlighted in gray within the table. Tests labeled as Steel Cert Category 1 and 2 are linked to MDT's Form 406: [Contractors Certificate of Compliance for Miscellaneous Steel and Iron Items](#). Buy America Category 1 and 2 retain their own tabs.

3.5 Final Records:

Final Record (FR) - Samples must be taken by or under the direct supervision of the Materials Supervisor or their authorized representative and must not be scheduled on such an inflexible and regular routine that its frequency can be predicted, but sufficient samples must be submitted to satisfy the frequency intended. FR samples are to be taken in accordance with the following link: [MT 602 Acceptance, Independent Assurance and Final Record Sampling](#).

3.6 Pre-Inspection:

Pre-Inspected items consist of products that undergo detailed inspections at the point of manufacture or products that are fabricated by Department Certified Plants as listed on the QPL. The purpose of Pre-Inspection is to verify that processes and materials used during fabrication meet Department requirements. One process the Department uses to accomplish this is by having a Department representative present during production to witness, sample, and test materials used. Another process the Department uses is Department Certified Plants. Department Certified Plants are producers employing internal quality control measures with an acceptable track record relating to product quality. The Department assures quality products are being produced at Department Certified Plants by implementing a combination of plant inspections, quality control system reviews, and Department witnessed or Department performed sampling and testing.

3.6 Pre-Inspection: (continued)

The Department representative performing pre-inspection of precast concrete products and prefabricated steel products verifies the fabricator is maintaining the supporting documentation regarding steel materials. Pre-inspected precast and prefabricated products delivered to the project must be accompanied by certification from the manufacturer stating all steel used in the product has been melted and manufactured in the United States and the fabricator has maintained supporting documentation. The Contractor is required to submit a Form 406 is when inspection of the product is made at the point of production and with certification by the plant that all steel incorporated has been melted and manufactured in the United States. All supporting documentation must be maintained by the fabricator.

Pre-inspection does not constitute project acceptance. The field is responsible for final inspection and acceptance; pre-inspected products identified as not meeting contract requirements may be subject to rejection.

3.7 Mix Designs:

Mix designs are submitted to MDT Helena Materials Bureau for verification and/or approval. Samples are submitted to determine if the quality of the materials and mix proportions conform to the plans and specifications. Mix Designs are highlighted within the tables in green.

4 Submittals, Documentation and Reports:

A Sampling Checklist Report in SiteManager will be generated at the beginning of each contract. This report will show the material to bid item association. It will also show who is responsible for witnessing/sampling and testing the material, the sample size per unit, how many samples need to be taken, how many samples have been taken, and if there are any sample deficiencies.

Once an individual takes or witnesses a sample, a sample record is created using the Sample Information window in SiteManager. When a sample or certification must be sent to the District/Area lab or the Helena Materials Bureau, a screenshot of the "Basic Sample Data" tab is printed out and included with/or attached to the material and/or any required certification sheets. Materials are tested and the results are entered in the Test tab of the Sample Information window in SiteManager.

Once the sample record is authorized, a report will be generated containing the test results. These reports are e-mailed to the appropriate personnel per a distribution list.
