1. INTRODUCTION

The Rostad Ranch 2014 Wetland Mitigation Monitoring Report presents the results of the second year of post-construction monitoring at the Rostad Ranch wetland mitigation site. The Montana Department of Transportation (MDT) Rostad Ranch wetland mitigation project is located in the southwest quarter of Section 12 and the northwest quarter of Section 13, Township 8 North, Range 11 East, Meagher County, Montana. The property is located approximately 0.6 miles northeast of Martinsdale, Montana (Figure 1). The wetland site was constructed to provide MDT with an estimated 39.70 acres of wetland mitigation credits on a private ranch that had been historically used for grazing cattle and hay production.

The entire 60-acre mitigation site is protected long-term by a MDT Wetland Conservation Easement agreement with the landowner. A fence installed along the boundaries of the MDT Conservation Easement demarcates the site.

Figures 2 and 3 in Appendix A show the site Monitoring Activity Locations and Mapped Site Features, respectively. The 2008 MDT Mitigation Site Monitoring Form, US Army Corps of Engineers (USACE) Wetland Determination Data Forms Great Plains Region (USACE 2010), and the 2008 MDT Montana Wetland Assessment Forms are included in Appendix B. Project area photographs are included in Appendix C and the Project Plan Sheet is included in Appendix D.

The wetland mitigation site is located within Watershed 10 – Musselshell River Basin. Wetlands were developed at this location to provide compensatory mitigation for wetland impacts associated with future transportation projects in the Musselshell River Basin. The Rostad Ranch site was selected based on site evaluations and project feasibility assessments initiated by MDT in 2002.

The project objectives include:

- Provide 39.70 acres of wetland mitigation credits resulting from restoration, creation, rehabilitation, and preservation within the site.
- Establish three types of wetland vegetation communities including;
 - 1.) Palustrine, emergent, wet meadow
 - 2.) Palustrine, scrub/shrub
 - 3.) Emergent zones around the open water areas and the establishment of upland buffer around the perimeter of wetlands.

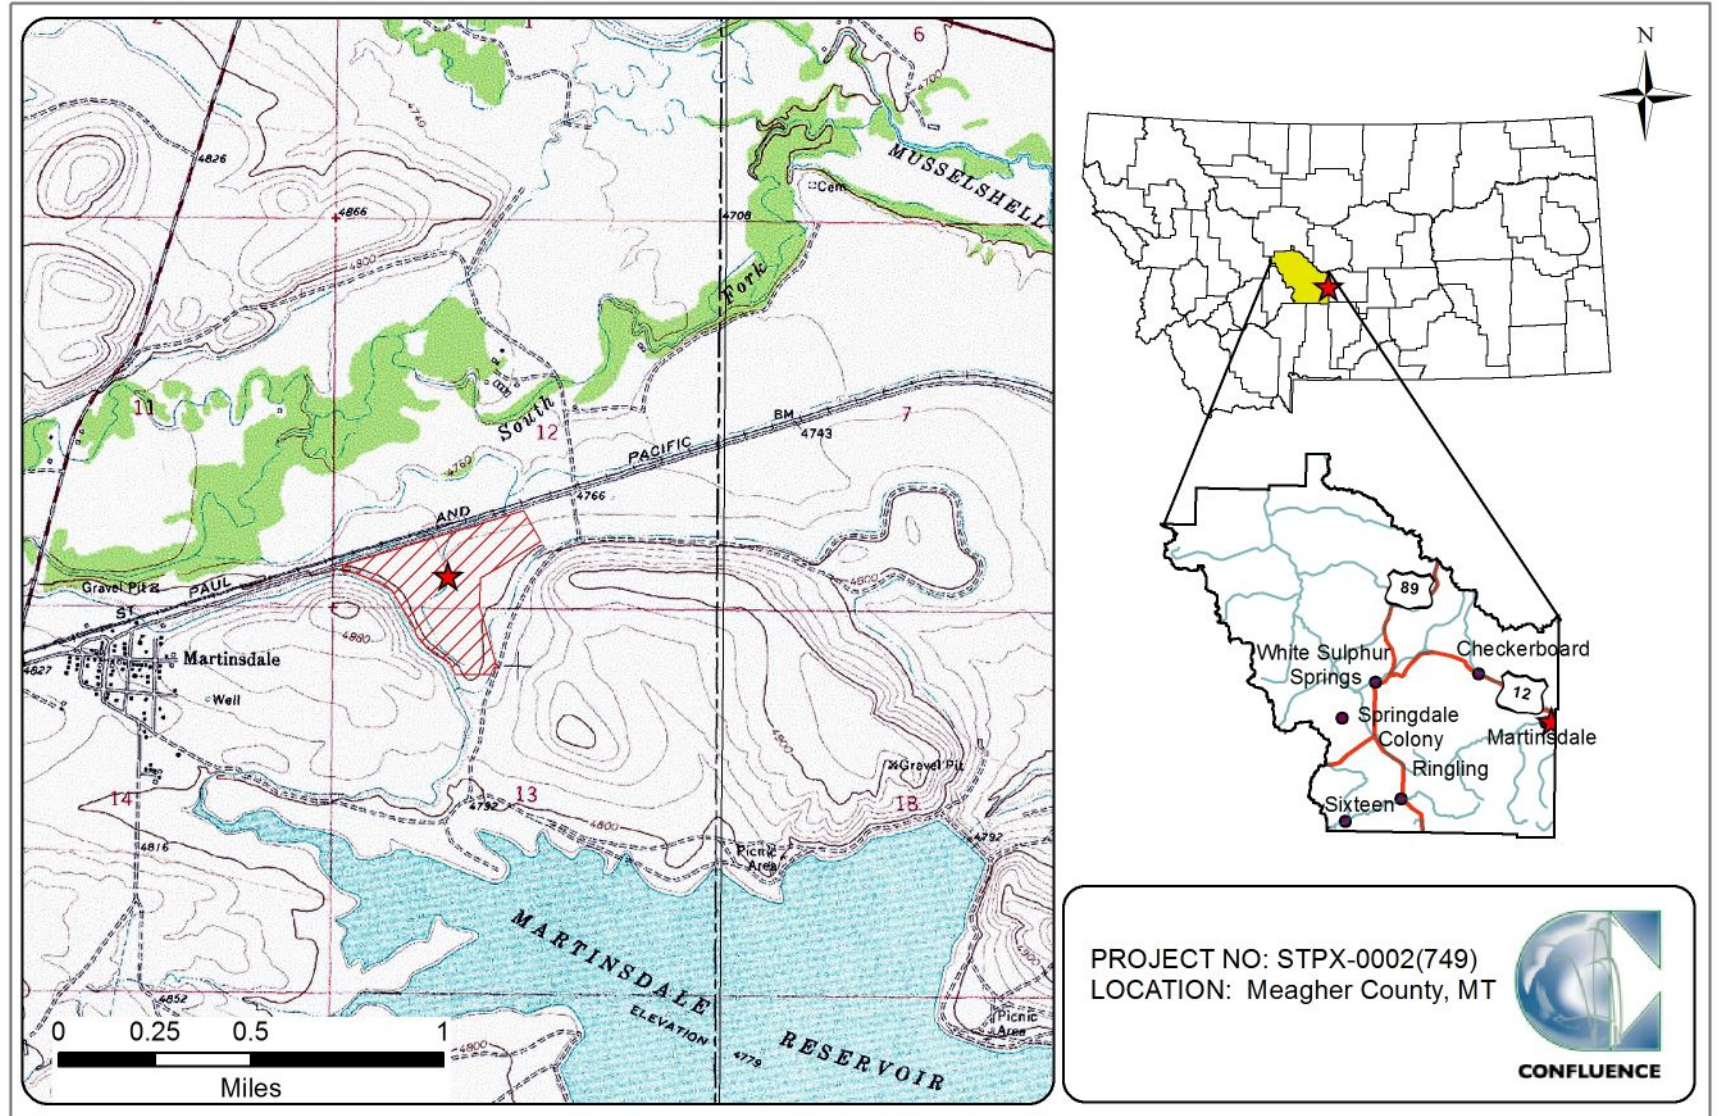

Figure 1. Project location of Rostad Ranch wetland mitigation site.

The project credit ratios as presented in the Rostad Ranch Wetland Mitigation Plan approved by the USACE are shown in Table 1.

Table 1. Wetland Credit Determination for the Rostad Ranch Wetland Mitigation Site.

Compensatory Mitigation Type	Proposed Wetland Type (Cowardin)	Anticipated Mitigation Area (acres)	Approved Mitigation Ratios*	Anticipated Mitigation Credit (acres)
Restoration (Re-establishment)	Palustrine Emergent & Scrub/shrub	27.11	1:1	27.11
Creation (Establishment)	Palustrine Emergent & Scrub/shrub	9.84	1:1	9.84
Restoration (Rehabilitation)	Palustrine Emergent	2.63	1.5:1	1.75
Preservation	Palustrine, Scrub/shrub	0.25	4:1	0.06
Upland Buffer	N/A	6.76	5:1	1.35
Permanent Wetland Impact	N/A	N/A	1:1	-0.41
Totals	Site Acreage	46.59	Credit Acreage	39.70

*Mitigation credit ratios utilized were from the Montana Corps Regulatory Programs 2005 Wetland Credit Ratios (USACE 2005)

The USACE approved performance standards are listed below.

1. **Wetland Characteristics:** All restored, created, enhanced, and preserved wetlands within the project limits will meet the standard three criteria (hydrology, hydrophytic vegetation, and hydric soils) established for determining wetland areas as outlined in the *1987 Corps of Engineers Wetland Delineation Manual* (Environmental Laboratory 1987) and the *2010 Regional Supplement to the USACE of Engineers Manual: Great Plains Region* (USACE 2010).

- a) **Wetland Hydrology Success** will be achieved where wetland hydrology is observed according to technical guidelines in the above-referenced documents. The USACE technical standard for monitoring wetland hydrology requires 14 or more consecutive days of flooding or ponding, or a water table 12 inches (30 centimeters) or less below the soils surface, during the growing season at a minimum frequency of 5 years in 10 (50 percent or higher probability).

- b) **Hydric Soil Success** will be achieved where hydric soil conditions are present [per the most recent Natural Resource Conservation Service (NRCS) definitions for hydric soil] or appear to be forming, the soil is sufficiently stable to prevent erosion, and the soil is able to support plant cover. Soil sampling will be conducted during the course of the monitoring period to determine if wetland areas are exhibiting characteristics of hydric soils per the 1987 Wetland Manual. Since typical hydric soil indicators may require long periods to form, a lack of distinctive hydric soil features will not be considered a failure if hydrologic and vegetation success is achieved.
 - c) **Hydrophytic Vegetation Success** will be achieved where combined absolute cover of facultative or wetter species is greater than or equal to 70 percent and Montana State-listed noxious weeds do not exceed 5 percent absolute cover. The following concept of “dominance”, as defined in the new Regional supplement to the 1987 US Army Corps of Engineers Wetland Delineation Manual for the Great Plains Region, will be applied during future routine wetland determinations in the created/restored wetlands: *“Subjectively determine the dominant species by estimating those having the largest relative basal area (woody overstory), greatest height (woody understory), greatest percentage of aerial cover (herbaceous understory), and/or greatest number of stems (woody vines).”*
 - i. **Woody Plants** – Plantings will be considered successful where they exceed 50 percent survival after 5 years. We anticipate natural colonization of woody plant species from nearby sources after construction activities are complete. The rate and extent of natural woody plant colonization will be dependent on factors such as habitat availability, animal activity, seed sources, and other natural selection factors.
 - ii. **Herbaceous Plants** – At the conclusion of the monitoring period, ocular coverage of desirable hydrophytic vegetation (wetland plants listed as OBL, FACW and FAC) will be at least 80 percent. A wetland seed mix was prepared for this site that included tufted hairgrass (*Deschampsia cespitosa*), Northwest Territory sedge (*Carex utriculata*), Baltic rush (*Juncus balticus*), American sloughgrass (*Beckmannia syzigachne*), American mannagrass (*Glyceria grandis*), and bluejoint reedgrass (*Calamagrostis canadensis*).
2. **Open Water Areas** – It is the intent of the project to provide seasonal open water in the wetland enhancement areas where excavation in the

existing wetland and upland will be completed. Open water that is established within the designated open water areas will be considered successful and creditable if it does not exceed 10 percent of the total wetland acreage (39.83 acres).

3. **Upland Buffer:** Success will be achieved when noxious weeds do not exceed 5 percent of cover within the buffer areas on site. Any area within the creditable buffer zone disturbed by project construction must have at least 50 percent aerial cover of desirable upland plant species by the end of the monitoring period.
4. **Weed Control:** Implementation of weed control will be based on annual monitoring of the site to determine the weed species present and degree of infestation within the site. Control measures, based on the monitoring results, will be implemented by MDT to minimize and/or eliminate infestations of state-listed noxious weed species within the site.
5. **Fencing:** Fencing for the proposed mitigation site has been installed along the perimeter of the easement boundary to protect the integrity of the wetland from disturbance that may be detrimental to the site. The installed fencing is designed to be wildlife-friendly, to allow for wildlife movement into and out of the wetland mitigation site.

Construction entailed filling of existing ditches, excavating and grading the site to distribute water across the mitigation site, and creating open water areas. The primary source of wetland hydrology for the site is groundwater. A groundwater seep located in the south portion of the site provides water to the site during high groundwater periods. Surface water from an irrigation ditch that runs along the south boundary of the site augments the site hydrology. A diversion structure was installed at the south end of the project to direct surface water onto the site to recharge groundwater.

Revegetation tasks included the use of a combination of wetland seed mixes, native shrubs/trees, and willow cuttings collected from a variety of native species. Mitigation habitat types developed on the site through the construction process include: restored open water; created, restored, and enhanced wetland areas; and upland buffer areas. Specific revegetation tasks were developed for each habitat type.

Monitoring of the MDT wetland mitigation site will be completed according to MDT's Standard Monitoring Protocol utilized for all MDT wetland mitigation sites since 1998. Monitoring will be implemented for a minimum of 5 years or longer as determined by the USACE – Montana Regulatory Office's review of the annual monitoring reports for the site. The USACE will make the final decision as to whether the site has met wetland success criteria.

2. METHODS

The first year of monitoring at the Rostad Ranch wetland mitigation site was completed on August 21, 2013. During this visit, MDT and Confluence personnel established permanent photo points and vegetation transects within the site. The second year of monitoring was completed on July 17, 2014. Information for the Mitigation Monitoring Form and Wetland Determination Data Form was entered in an electronic tablet during the field investigation (Appendix B). Monitoring activity sites were located with a global positioning system (GPS) as shown on Figure 2 (Appendix A). Information collected included a wetland delineation, vegetation community mapping, vegetation transect monitoring, soil and hydrology data collection, bird and wildlife use documentation, photographic documentation, and a non-engineering examination of the infrastructure established within the mitigation project area.

2.1. Hydrology

The presence of hydrological indicators as outlined on the Wetland Determination Data Form was assessed at four data points established within the project area. The hydrologic indicators were evaluated according to features observed during the site visit. The data were recorded on the electronic Wetland Determination Data Form (Appendix B). Hydrologic assessments allow evaluation of mitigation criteria addressing inundation/saturation requirements.

Technical criteria for wetland hydrology guidelines have been established as “permanent or periodic inundation, or soil saturation within 12 inches of the ground surface for a significant period (12.5 percent of the growing season) during the growing season” (USACE 2010). Systems with continuous inundation or saturation for greater than 12.5 percent of the growing season are classified as wetlands. The growing season is defined for purposes of this report as the number of days when there is a 50 percent probability that the minimum daily temperature is greater than or equal to 28.5 degrees Fahrenheit (Environmental Laboratory 1987). Temperature data recorded for the meteorological station at the Martinsdale 3NNW (245387) weather station, located approximately 1 mile from the wetland mitigation site, have a median (5 years in 10) growing season length of 119 days. Areas defined as wetlands would require 15 days of inundation or saturation within 12 inches of the ground surface to meet the hydrology criteria. Soil pits excavated during the wetland delineation were used to evaluate groundwater levels within 18 inches of the ground surface. The data were recorded on the Wetland Determination Data Form (Appendix B).

2.2. Vegetation

The boundaries of the dominant vegetation communities were determined in the field during the active growing season and subsequently delineated on the 2014 aerial photograph. Percent cover of dominant species within a community type was visually estimated and recorded using the following classes: 0 (less than 1 percent), 1 (1 to 5 percent), 2 (6 to 10 percent), 3 (11 to 20 percent), 4 (21 to 50 percent), and 5 (greater than 50 percent) (Appendix B). Community types were

named based on the dominant vegetation species that characterized each mapped polygon (Figure 3, Appendix A).

Temporal changes in vegetation will be evaluated through annual assessments of static belt transects established in August 2013 (Figure 2, Appendix A). Vegetation composition was assessed and recorded along three vegetation belt transects (T-1, T-2, T-3) approximately 10 feet wide and 422, 453, and 320 feet long, respectively (Figure 2, Appendix A).

The transect locations were recorded with a resource-grade GPS unit. Spatial changes in the dominant vegetation communities were recorded along the stationed transect. The percent aerial cover of each vegetation species within the belt transect was estimated using the same values and cover ranges used for the vegetation community composition (Figure 3, Appendix B). Photographs were taken at the endpoints of each transect during the monitoring event (Appendix C).

The survival of woody species planted onsite was recorded during monitoring. The Montana State Noxious Weed List (September 2010), prepared by the Montana Department of Agriculture, was used to categorize weeds identified within the site. The location of noxious weeds was noted in the field and mapped on the aerial photograph (Figure 3, Appendix A). The noxious weed species identified are color-coded and denoted with the symbol “x”, “▲”, or “■” on Figure 3, representing 0 to 0.1 acre, .1 to 1 acre, or greater than 1 acre in extent, respectively. The letters T, L, M, or H represent the cover classes on Figure 3, standing for less than 1 percent, 1 to 5 percent, 6 to 25 percent, and 26 to 100 percent, respectively.

2.3. Soil

Soil information was obtained from the *Soil Survey for Meagher County Area* (SSURGO 2012) and *in situ* soil descriptions. Soil cores were excavated using a hand auger and evaluated according to procedures outlined in the 1987 Manual and the 2010 Regional Supplement. A description of the soil profile, including hydric soil indicators when present, was recorded on the Wetland Determination Data Form for each profile (Appendix B).

2.4. Wetland Delineation

Waters of the U.S. including special aquatic sites and jurisdictional wetlands were delineated throughout the project area in accordance with criteria established in the 1987 Manual and the 2010 Regional Supplement to the USACE of Engineers Manual: Great Plains Region (USACE 2010). The technical criteria for hydrophytic vegetation, hydric soil, and wetland hydrology described in the 2010 Regional Supplement must be satisfied to delineate a representative area as jurisdictional. The name and indicator status of plant species was derived from the 2014 National Wetland Plant List (NWPL) (Lichvar *et al.* 2014). A Routine Level-2 on-site Determination Method (Environmental Laboratory 1987) was used to delineate jurisdictional areas within the project

boundaries. The information was recorded electronically on the Wetland Determination Data Form (Appendix B).

The wetland boundary was determined in the field based on changes in plant communities and/or hydrology, and changes in soil characteristics. Topographic relief boundaries within the project area were also examined and cross-referenced with soil and vegetation communities as supportive information for this delineation. Vegetation composition, soil characteristics, and hydrology were assessed at likely wetland and adjacent upland locations. If all three parameters met the criteria, the area was designated as wetland and mapped by vegetation community type. If any one of the parameters did not exhibit positive wetland indicators, the area was determined to be upland unless the site was classified as an atypical situation, potential problem area, or special aquatic site, i.e., mudflat. The wetland boundary was GPS surveyed as shown on the 2014 aerial photograph (Figure 3). Wetland areas were estimated using geographic information system (GIS) methods.

2.5. Wildlife

Observations of mammal, reptile, amphibian, and bird use were recorded on the Mitigation Monitoring form during the site visit. Indirect use indicators including tracks, scat, burrow, eggshells, skins, and bones were also recorded. These signs were recorded while traversing the site for other required activities. Direct sampling methods such as snap traps, live traps, and pitfall traps, were not used. A comprehensive species list of wildlife observed during the annual monitoring periods has been compiled and is presented in the results section.

2.6. Functional Assessment

The 1999 MDT Montana Wetland Assessment Method (MWAM) (Berglund 1999) was used to evaluate the functions and values of the 3.4 acres of existing wetlands identified on the site in 2004. The 2008 MDT MWAM (Berglund and McEldowney 2008) was used to evaluate functions and values of wetlands delineated on the site in 2013 and 2014. This method provides an objective means of assigning wetlands an overall rating and provides regulators a means of assessing mitigation success based on wetland functions. Functions are self-sustaining properties of a wetland ecosystem that exist in the absence of society and relate to ecological significance without regard to subjective human values (Berglund and McEldowney 2008). Field data for this assessment were collected during the site visit. The Wetland Assessment Form was completed for one assessment area (AA) that included both created and existing wetlands within the mitigation site (Appendix B).

2.7. Photo Documentation

Monitoring at photo points provided supplemental information documenting wetland, upland, and vegetation transect conditions; site trends; and current land uses surrounding the site. Photographs were taken at established photo points throughout the mitigation area during the site visit (Appendix C). Photo point locations were recorded with a resource-grade GPS unit (Figure 2, Appendix A).

2.8. GPS Data

Site features and survey points were collected with a resource-grade Thales Pro Mark III GPS unit during the 2014 monitoring season. Points were collected using WAAS-enabled differential correction satellites, typically improving resolution to sub-meter accuracy. The collected data were then transferred to a personal computer, imported into GIS, and presented in Montana State Plane Single Zone NAD 83 meters. Site features and survey points that were located with a GPS included wetland boundaries, fence boundaries, photograph points, transect endpoints, and wetland/upland data points.

2.9. Maintenance Needs

Channels, engineered structures, fencing, bird boxes, and other features were examined during the site visit for obvious signs of breaching, damage, or other problems. This was a cursory examination and did not constitute an engineering-level structural inspection.

3. RESULTS

3.1. Hydrology

Climate data from the meteorological station at the Martinsdale 3 NNW, Montana (245387), weather station recorded an average annual precipitation rate of 13.24 inches from January 1893 to July 2012 (Western Region Climate Center [WRCC] 2013). The historic precipitation average for the time period of January to August (1893 through 2012) was 10.55 inches. This station, however, was missing precipitation data for the latter part of 2011 through 2014. The Lennep 6 WSW weather station is located near the site (approximately 11 miles southwest) with a period of record extending from August 1959 through September 2014. Based on data recorded from the Lennep Station for the January through August time period, precipitation totals for this region were 12.56 inches (long-term average), 16.32 inches (2011), 9.72 inches (2012), 12.3 inches (2013), and 14.27 inches (2014). The data since construction show below average precipitation in 2012, near average precipitation in 2013, and above average precipitation in 2014.

The hydrology for the wetland mitigation site is supplied from multiple sources, including a shallow seasonal groundwater table, groundwater emerging from a natural spring located near the willow (*Salix exigua*) stand in south portion of the site, direct precipitation, and surface runoff. Construction included excavating and grading to fill drainage ditches, distributing water across the mitigation site, creating open water areas, and installing a diversion structure in the south end of the site to direct irrigation water to the mitigation site. The MDT has secured water rights to use surface water as a secondary source of hydrology to supplement the groundwater and ensure long-term viability of the wetland mitigation site.

During the 2014 field survey, approximately 40 percent of the wetland area was inundated. Water depths ranged from 0.25 to 3.5 feet and averaged 0.5 feet. Areas not inundated exhibited seasonal soil saturation within 12 inches of the

ground surface. The groundwater level in monitoring well MW-1 located along the constructed dike was greater than 6 feet below the ground surface (bgs) during the survey (Figure 2, Appendix A). Other evidence of wetland hydrology observed on the site in 2014 included drainage patterns, soil saturation, water marks, drift deposits, iron deposits, surface soil cracks, algal mats, geomorphic position, and a positive FAC-neutral test.

Four data points were sampled to determine the wetland/upland boundaries. Data points R-1w and R-2w were located in areas that met the wetland criteria. Wetland hydrology indicators at R-1w, located near the edge of a created wetland cell, included 0.5 inches of surface water, a water table to the ground surface, saturation to the ground surface, the presence of reduced iron, and a positive FAC-Neutral test. Data point R-2w was located near the center of the site between the excavated cells. Surface water at 0.5 inches, a high water table to the ground surface, saturation to the ground surface, oxidized rhizospheres on living roots, presence of reduced iron, drainage patterns, and a positive FAC-neutral test provided several positive indicators of wetland hydrology. The upland data points were located upslope of the wetland test pits. There were no positive hydrological indicators observed at data points R-1u or R-2u.

3.2. Vegetation

A total of sixty-five plant species were observed on the site in 2013 and 2014 (Table 2). Vegetation plant communities were identified by plant composition and dominance. Four vegetation community types were identified in 2014 including upland Type 1 – *Phleum pratense*/*Trifolium* spp., wetland Type 2 – *Juncus balticus*/*Carex nebrascensis*, wetland Type 3 – *Salix exigua*, and wetland Type 5 – *Glyceria grandis*/*Typha latifolia*. Wetland Type 4 – Open water characterized the aquatic habitat found in the lowest contour of the excavated depressions. The community composition is provided on the Monitoring Form in Appendix B and the community boundaries are shown on Figure 3 in Appendix A. These community types are discussed below.

Upland community Type 1 – *Phleum pratense*/*Trifolium* spp. was identified on approximately 45.6 acres across a majority of the site. The community generally represented undisturbed uplands historically used for hay and cattle production and areas where spoils from excavation activities were deposited. Dominant species included common timothy (*Phleum pratense*), white clover (*Trifolium repens*), and Mexican-fireweed (*Bassia scoparia*), with fewer percent cover of smooth brome (*Bromus inermis*), creeping wild rye (*Elymus repens*), meadow fescue (*Festuca pratensis*), spotted knapweed (*Centaurea stoebe*), goosefoot (*Chenopodium* sp.), and yellow sweet clover (*Melilotus officinalis*). A total of forty-two species were identified in this community.

¹ 2014 NWPL (Lichvar *et al.*, 2014)Species identified in 2014 are **bolded**.

Wetland community Type 2 – *Juncus balticus*/*Carex nebrascensis* characterized a majority of the wetland areas delineated in 2013 and 2014. The community was mapped across 11.2 acres within the creation, re-establishment, and rehabilitation areas of the mitigation site. The extent of the vegetation community increased by 0.61 acre in 2014 as the wetland expanded into upland community 1. Baltic rush (*Juncus balticus*), Nebraska sedge (*Carex nebrascensis*), and American slough grass (*Beckmannia syzigachne*) were common components of this community. Community Type 2 consisted of a diverse mix of 19 wetland species.

Wetland community Type 3 – *Salix exigua* was identified within the 0.31-acre pre-existing wetland area in the south end of the site that remained undisturbed

during 2012 construction. Narrow-leaf willow (*Salix exigua*) dominated the area. Numerous willow cuttings were installed around this community and displayed an approximate 75 percent survival during the 2014 field survey. The community type is expected to expand over time as indicated by the willow saplings/cuttings noted around the margins of the community. Fowl bluegrass (*Poa palustris*), tufted hairgrass (*Deschampsia caespitosa*), Nebraska sedge, Northwest Territory sedge (*Carex utriculata*), field meadow-foxtail (*Alopecurus pratensis*), black bentgrass (*Agrostis gigantea*), and neckweed (*Veronica peregrina*) were also identified within the community.

Wetland community Type 4 – Open water was mapped in 2013 and 2014 on two inundated areas, one impounded by a constructed dike in the north half of the site, and the second an excavated depression located in the south half. The vegetation cover throughout the 2.85-acre community was less than 10 percent, a function of the short time frame since construction in 2012. Emergent and submergent species are expected to develop further in subsequent growing seasons. Common spikerush (*Eleocharis palustris*), broad-leaf cat-tail (*Typha latifolia*), and American slough grass were noted around the shallow water margins of this community. Great Basin calico-flower (*Downingia laeta*), a species identified by the Montana Natural Heritage Program (MTNHP) as a species of concern that is rated S2S3 and rare in Montana, was also identified along the open water margin of this community. A trace amount of green algae (a protist) was present in the open water.

Wetland community Type 5 – *Glyceria grandis*/*Typha latifolia*, defined for the first time in 2014, was observed at the edge of an excavated cell located in the south half of the site. The 0.03-acre community was dominated by emergent species including American manna grass (*Glyceria grandis*), broad-leaf cat-tail, common spikerush, and American sloughgrass.

Vegetation cover was measured along three transects at the Rostad Ranch Mitigation Site in 2014 (Figure 2, Appendix A). The data recorded on Transect 1 (Monitoring Forms, Appendix B) are summarized in tabular and graphical formats in Table 3 and Chart 1 and Chart 2, respectively. Photographs of the transect ends are provided on Page C-8 of Appendix C. Transect T-1 extends 422 feet from a corner of the easement area into the large open water area impounded by the constructed dike. The transect intercepted upland community Type 1, wetland Type 2, and ended within the Type 4 open water community. A total of 30 vegetative species were identified along the transect including nine hydrophytes. Approximately 30 percent of the length of the transect was located in the Type 2 (*Juncus balticus*/*Carex nebrascensis*) hydrophytic community and approximately 17 percent of the transect intercepted the open water. The extent of open water on the transect increased by approximately 4 percent in 2014.

Table 3. Data summary for Transect T-1 from 2013 and 2014 at the Rostad Ranch Wetland Mitigation Site.

Monitoring Year	2013	2014
Transect Length (feet)	422	422

% Transect Length Comprising Unvegetated Open Water	12.6	16.8
% Transect Length Comprising Mudflat	0	0

Chart 1. Transect maps showing community types on Transect T-1 in 2013 and 2014 at the Rostad Ranch Wetland Mitigation Site.

Chart 2. Length of habitat types within Transect T-1 in 2013 and 2014 at the Rostad Ranch Wetland Mitigation Site.

Data collected on Transect T-2 (Monitoring Form, Appendix B) are summarized in tabular and graphic formats (Table 4, Charts 3 and 4, respectively) with photographs taken at the endpoints provided on Page C-9 of Appendix C. This transect began at a mature cottonwood (*Populus sp.*) tree near the entrance of the site and extended 453 feet, alternating between upland community Type 1 and wetland community Type 2. Approximately 55 percent of the transect was located in wetland community Type 2 in 2014, a 10 percent increase since 2013.

Table 4. Data summary for Transect T-2 in 2013 and 2014 at the Rostad Ranch Wetland Mitigation Site.

Monitoring Year	2013	2014
Transect Length (feet)	453	453

Chart 3. Transect maps showing community types on Transect T-2 in 2013 and 2014 at the Rostad Ranch Wetland Mitigation Site.

Chart 4. Length of habitat types within Transect T-2 in 2013 and 2014 at the Rostad Ranch Wetland Mitigation Site.

Transect T-3 was established in the south end of the mitigation site and traversed the excavated re-establishment and rehabilitation credit areas. Transect T-3 also began at a mature cottonwood tree and extended east for 320 feet (Figure 2, Appendix A). Photographs of the transect endpoints are shown on page C-10 (Appendix C). This transect originated in the upland *Phleum* community, transitioned into wetland community Type 2, continued through wetland Type 5 and the excavated open water depression, and ended in community Type 2. The *Glyceria/Typha* community (Type 5) replaced a majority of the open water observed on the transect in 2013. Hydrophytic plants dominated 88.4 percent of the transect intervals. Approximately 10 percent of the transect consisted of bare ground and decreased from 15 percent in 2013, a result of the recent disturbance associated with construction of the wetland cells.

Table 5. Data summary for Transect T-3 in 2013 and 2014 at the Rostad Ranch Wetland Mitigation Site.

Monitoring Year	2013	2014

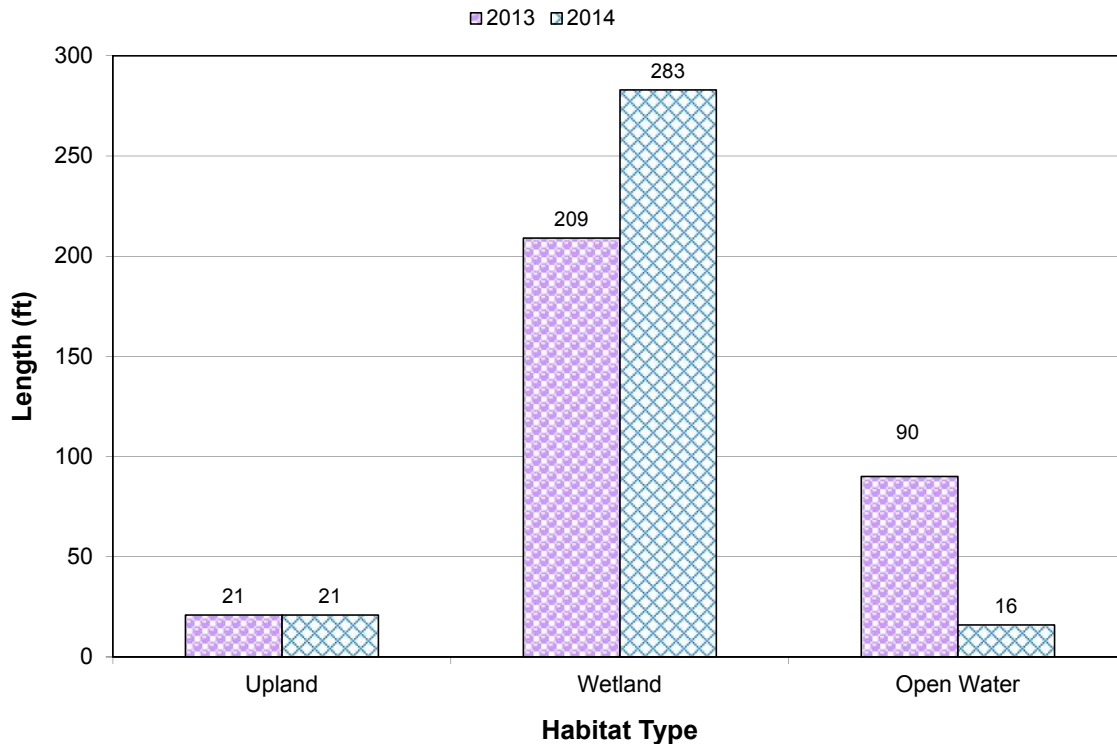

Chart 6. Length of habitat types within Transect T-3 in 2013 and 2014 at the Rostad Ranch Wetland Mitigation Site.

Priority 2B noxious weeds identified within the Rostad Ranch mitigation site included spotted knapweed (*Centaurea stoebe*), Gypsy-flower (Houndstongue – *Cynoglossum officinale*), Canadian thistle (*Cirsium arvense*), field bindweed (*Convolvulus arvensis*), common tansy (*Tanacetum vulgare*), and the Priority 2A listed hoary false madwort (Hoary alyssum-*Berteroa incana*). A total of 25 infestation areas were mapped in 2014, ranging in size from less than 0.1 acre to 1 to 5 acres in size. The majority of the infestations were located at the edge of the constructed wetlands in upland community Type 1. The invasive species appear to have established on the site prior to mitigation construction.

Approximately 2,000 willow cuttings were planted throughout the excavated wetland mitigation areas. Approximately 75 percent of the willow cuttings survived through 2014. The cuttings appeared healthy and vigorous with little to no sign of browse. One hundred (100) black cottonwoods (*Populus balsamifera*) and 100 quaking aspens (*Populus tremuloides*) were installed around the perimeter of the proposed open water areas in 2012. Survival of these containerized, 5-gallon plant materials was estimated at 80 percent in 2014.

3.3. Soil

The project site was identified in the *Meagher County Soil Survey* (SSURGO 2012) within the Varney-Notter cobbly loams and Delpoint variant-Marmarth-Cabbart loams mapped soil series. The Varney-Notter mapped soil unit was located across the north half of the mitigation site and the Delpoint variant-Marmarth-Cabbart loams were mapped across the south half. The series generally consist of very deep, well-drained soils formed in alluvium. The mapped soil units were not identified on the Montana Hydric Soils list.

Soil test pits were excavated at four locations (Figure 2, Appendix A). Data points R-1w and R-2w were located in areas that exhibited hydric soils. The soil at R-1w, situated at the edge of an excavated depression, consisted of a dark gray (10YR 4/1) sandy loam matrix with ten percent yellowish brown (10YR 5/6) redoximorphic concentrations, positive indicators of a depleted matrix (F3). The soil profile at R-2w, located in a drainage area between two cells, revealed a dark gray (10YR 4/1), sandy loam with fifteen percent yellowish brown (10YR 5/6) redoximorphic concentrations, which met the hydric criteria for a depleted matrix (F3). Data point R-1u, located upslope from R-1w, displayed a very dark, grayish brown (10 YR 3/2), sandy clay loam, with 10 percent gravel and cobbles. No redoximorphic characteristics were evident. Test pit R-2u was located upslope from R-2w. The soil profile revealed a very dark grayish brown (10 YR 3/2) loam without redoximorphic features. There were no positive indicators of hydric soil at either upland data point.

3.4. Wetland Delineation

Four data points were used to define the wetland boundary in 2014 (Figure 2, Appendix A and Wetland Determination Data Forms, Appendix B). Data points R-1w and R-2w were located in areas that met the wetland criteria. The total wetland acreage delineated in 2014, including pre-existing wetland areas, was

14.40 acres (Table 6). The proposed wetland areas identified within the mitigation plan were overlaid with the wetlands surveyed in 2014 to identify the extent of wetlands within each crediting areas. The wetland area within the Rostad Ranch mitigation site increased approximately 0.66 acres in 2014. The 2014 wetland delineation included 0.25 acre within the preservation credit area, 9.91 acres within the re-establishment credit area, 1.56 acres within the wetland rehabilitation credit area, and 2.68 acres within the creation credit area. The decreased noted within the re-establishment area between 2013 and 2014 was the result of refinement of wetland boundaries for the crediting areas as presented within the 2007 wetland mitigation plan. Specifically, some of the created wetland areas were erroneously included within the restoration wetland areas in 2013. The construction activities completed to raise the groundwater table site wide are expected to support the expansion and development of additional jurisdictional wetlands over the course of the 5-year monitoring period.

Table 6. Total wetland acres delineated in 2013 and 2014 at the Rostad Ranch Wetland Mitigation Site.

WETLAND AND UPLAND HABITATS	2013 Delineated Acres	2014 Delineated Acres
Project Area	60.00	60.00
Created Wetlands	1.07	2.68
Restoration Wetlands (Re-establishment)	10.89	9.91
Restoration Wetlands (Rehabilitation)	1.53	1.56
Preservation Wetlands	0.25	0.25
Total Wetlands	13.74	14.40

3.5. Wildlife

A comprehensive list of bird and other wildlife species observed directly or indirectly in 2014 is presented in Table 7. Ten bird species were identified in 2014 including two American white pelicans (*Pelecanus erythrorhynchos*), two northern harriers (*Circus cyaneus*), two sandhill cranes (*Grus canadensis*), five Wilson's snipe (*Gallinago delicata*), a blue-winged teal (*Anas discors*), and eight common grackle (*Quiscalus quiscula*). Bank swallows (*Riparia riparia*) were observed occupying the bird boxes. One Boreal chorus frog (*Pseudacris maculata*) was observed during the site visit.

3.6. Functional Assessment

The 1999 MDT MWAM (Berglund 1999) was used to evaluate the three existing wetlands identified within the site in 2004. The 2008 MWAM (Berglund and McElDowney 2008) has been used to evaluate the site in 2013 and 2014. All wetlands identified in 2013 and 2014 were evaluated as one AA. The results of the 2004, 2013, and 2014 assessments are summarized in Table 8. The completed 2014 MWAM form is located in Appendix B.

The 2004 assessment identified a total of 3.4 acres of Category III wetlands. The majority of the existing wetlands within the site prior to construction consisted of man-made drainage and irrigation ditches constructed to drain and disperse water throughout the site. The only remnants of the historic wetlands are a willow thicket and roadside drainage ditch. The pre-existing wetlands averaged 34 percent of the possible score and attained a total of 12.46 functional units.

Table 7. Wildlife species observed in 2013 and 2014 at the Rostad Ranch Wetland Mitigation Site.

COMMON NAME	SCIENTIFIC NAME
AMPHIBIANS	
Boreal Chorus Frog	<i>Pseudacris maculata</i>
BIRDS	
American Goldfinch	<i>Spinus tristis</i>
American Robin	<i>Turdus migratorius</i>
American White Pelican	<i>Pelecanus erythrorhynchos</i>
Bank Swallow	<i>Riparia riparia</i>
Blue-winged Teal	<i>Anas discors</i>
Brewer's Blackbird	<i>Euphagus cyanocephalus</i>
Canada Goose	<i>Branta canadensis</i>
Common Grackle	<i>Quiscalus quiscula</i>
Sandhill Crane	<i>Grus canadensis</i>
Spotted Sandpiper*	<i>Actitis macularius</i>
Tree Swallow*	<i>Tachycineta bicolor</i>
Wilson's Snipe	<i>Gallinago delicata</i>
Grasshopper Sparrow	<i>Ammodramus savannarum</i>
Green-winged Teal	<i>Anas crecca</i>
Mallard	<i>Anas platyrhynchos</i>
Northern Harrier	<i>Circus cyaneus</i>
Red-tailed Hawk	<i>Buteo jamaicensis</i>
Red-winged Blackbird	<i>Agelaius phoeniceus</i>
Sandhill Crane	<i>Grus canadensis</i>
Spotted Sandpiper	<i>Actitis macularius</i>
Tree Swallow	<i>Tachycineta bicolor</i>
Willet	<i>Tringa semipalmata</i>
Wilson's Snipe	<i>Gallinago delicata</i>
MAMMALS	
Black Bear	<i>Ursus americanus</i>
Coyote	<i>Canis latrans</i>
Deer Sp.	<i>Odocoileus sp.</i>
Muskrat	<i>Ondatra zibethicus</i>
Raccoon	<i>Procyon lotor</i>

Species identified in 2014 are **bolded**.

Due to the complex boundaries of the proposed mitigation credits within the site, the Rostad Ranch mitigation wetland was assessed as one AA in 2013 and 2014. The functional ratings displayed a decrease between 2013 and 2014, primarily due to re-evaluation of the water regime within the site from perennial to seasonal. The sediment/shoreline stabilization rating was also included in 2014 due to the susceptibility of the northern cell to erosion from wave action. The AA was rated as a Category III wetland in 2014, scoring 51.7 percent of the possible points and attaining 67.0 functional units. There was a slight increase in the extent of wetland within the site in 2014. The AA received high ratings for MTNHP species habitat due to the documented primary habitat for the Great Basin calico-flower. The ratings and functional units are expected to increase as the recently disturbed areas establish wetland vegetation and as additional wetland areas develop as a result of the site wide rise in the groundwater table.

Table 8. Functions and Values of the Rostad Ranch Wetland Mitigation Site from 2004, 2013 and 2014.

Function and Value Parameters from the Montana Wetland Assessment Method	2004* W-1-04	2004* W-2-04	2004* W-3-04	2013**	2014**

**2008 MWAM form (Berglund and McEldowney, 2008)

3.7. Photo Documentation

Photographs taken in 2014 at photo points one through seven (PP1 through PP7; Figure 2, Appendix A) are shown on pages C-1 to C-7 of Appendix C. Vegetation transect end points are shown on pages C-8 to C-10. Photographs of the data points are included on page C-5.

3.8. Maintenance Needs

Priority 2B noxious weeds identified within the Rostad Ranch mitigation site included spotted knapweed, Gypsy-flower, Canadian thistle, field bindweed, common tansy, and the Priority 2A listed hoary false madwort. A total of 25 infestation areas were mapped in 2014, ranging in size from less than 0.1 acre to

1 to 5 acres in size. The majority of the infestations were located in upland community Type 1 and appeared to have been established within the site prior to mitigation construction. MDT, as its overall goal to achieve a natural wetland ecosystem, will continue to conduct weed control at this site based upon the findings of the annual wetland monitoring and site inspections.

The irrigation diversion structure was closed during the July 2014 investigation due to regulatory requirements associated with DNRC's approval of water rights for this site. The water rights were approved in September 2014. Several areas of the constructed embankment dike around the northern cell had been breached during early summer in 2013. The MDT made some temporary repairs with coir logs and rock to prevent further washouts and degradation of the structure. An MDT contractor undertook corrective actions in November 2013 to raise the level of the dike and repair all the breaches in the structure. Besides the corrective actions undertaken by MDT to repair the northern embankment structure, no maintenance was identified for any of the structures in 2014.

The wildlife-friendly fence installed around the easement area was intact except for one bent fence post observed in 2014 near the northeast corner of the site. Seven bluebird boxes were installed around the site perimeter in 2012. Bank swallows occupied several of the bird boxes in 2014. The bluebird boxes were in good condition in 2014.

3.9. Current Credit Summary

Table 9 summarizes the estimated wetland credits based on the USACE-approved credit ratios and the wetland delineation completed in July 2014. Proposed mitigation credits from the 2007 Rostad Ranch Mitigation Plan included the re-establishment of 27.11 wetland acres, rehabilitation of 2.63 wetland acres, creation of 9.84 wetland acres, preservation of 0.25 wetland acres, and maintenance of 6.76 acres of upland buffer (Table 1). The wetland acreages delineated in 2014 included 9.91 acres of re-established wetlands, 1.56 acres of rehabilitated wetland, 2.68 acres of created wetland, and 0.25 acres of preservation wetland (community Type 3). The total mitigation credit estimated in 2014, including the upland buffer credit and the deduction for the 0.41-acre wetland impact incurred during mitigation construction, totaled 14.63 credit acres.

Table 10 provides a summary of the approved performances standards and success criteria based on site conditions documented in 2014. All wetlands delineated at the Rostad Ranch mitigation site in 2014 satisfied the three criteria of wetland hydrology, hydrophytic vegetation, and hydric soils. Willow stakes planted within the site exhibited a 75 percent survival rate during the second year of planting, an approximate 20 percent decrease from the 95 percent survival rate observed in 2013. Although recently disturbed, the site was well vegetated with aerial coverage by desirable plants estimated at greater than 80 percent. The coverage of state-listed noxious weeds in the upland buffer exceeded 5 percent in 2014. The cover of noxious weeds within the delineated wetlands was less than 5 percent. The extent of the open water surveyed in 2014 comprised

20 percent of the total wetland acreage, exceeding the cap of 10 percent stipulated in the USACE-approved performance criteria. The percentage of open water is expected to decrease as additional emergent wetlands develop on site. The entire 60-acre easement area has been fenced to exclude grazing.

Table 9. Summary of wetland credits at the Rostad Ranch Wetland Mitigation Site from 2013 to 2014.

Compensatory Mitigation Type	Wetland Type (Cowardin)	Approved Migration Ratios*	Anticipated Mitigation Area (acres)	Anticipated Mitigation Credit (acres)	2013 Delineated Mitigation Areas (acres)	2013 Estimated Mitigation Credit (acres)	2014 Delineated Mitigation Areas (acres)	2014 Estimated Mitigation Credit (acres)
Restoration (Re-establishment)	Palustrine Emergent	1:1	27.11	27.11	10.89	10.89	9.91	9.91
Creation (Establishment)	Palustrine Emergent	1:1	9.84	9.84	1.07	1.07	2.68	2.68

	Totals		46.59	39.70	20.5	13.98	21.16	14.63

*Mitigation credit ratios utilized were from the Montana Corps Regulatory Programs 2005 Wetland Credit Ratios (USACE 2005).

**Anticipated upland buffer credit utilized until wetland areas expand to full extent.

Table 10. Summary of performance standards and success criteria.

Performance Standards	Success Criteria	Criteria Achieved Y/N	Discussion
Wetland Characteristics	Meet the three parameter criteria for hydrology, vegetation, and soils as outlined in the 1987 Wetland Delineation Manual and 2010 Great Plains Region.	Y	Areas identified as wetland habitat within the mitigation site meet the three parameter criteria.
Wetland Hydrology	Soil saturation present for at least 12.5 percent of the growing season.	Y	Areas identified as wetland habitat within the mitigation site exhibit soil saturation for a minimum 12.5 percent of growing season.
Hydric Soil	Hydric soil conditions present or appear to be forming.	Y	The recently constructed wetland complex exhibits weak hydric soil development in areas originally identified as upland prior to construction. Pre-existing hydric soil characteristics are present in several areas identified as wetland prior to project construction.
	Soil is sufficiently stable to prevent erosion.	Y	Disturbed soil is stable and does not exhibit signs of erosion.
	Soil is able to support plant cover.	Y	Plant cover has continued to develop across disturbed soils.
Hydrophytic Vegetation	Achieved where combined absolute cover of facultative or wetter species is greater than or equal to 70 percent.	Y	Areas identified as wetland habitat within the mitigation site support a prevalence of hydrophytic vegetation (OBL, FACW, and FAC).
	Noxious weeds do not exceed 5 percent cover.	Y	Numerous noxious weed infestations have been mapped across this site, primarily outside of site wetlands. Estimated noxious weed cover within delineated wetlands is below 5 percent.
Woody Plants	Plantings will be considered successful where they exceed 50 percent survival after 5 years.	Y	Approximately 75 percent of the woody plantings observed were alive in 2014, exceeding the 50 percent survival rate.
Herbaceous Plants	At the conclusion of the monitoring period, ocular coverage of desirable hydrophytic vegetation will be at least 80 percent.	Y	Aside from the 2.85 acres identified as open water, created wetlands generally exhibited greater than 80 percent vegetation cover during the 2014 monitoring event and showed increased vegetation cover from 2013.
Open Water Areas	Open water that is established within the designated wetland cells will be considered successful and creditable if it does not exceed 10 percent of the total wetland acreage.	N	Open water was mapped within 20% of the total wetland acreage in 2014. These areas are exhibiting emergent vegetation development and are anticipated to convert to aquatic macrophyte communities within the 5 year monitoring period.
Upland Buffer	Success will be achieved when noxious weeds do not exceed 5 percent cover within the buffer areas on site.	N	Numerous noxious weed infestations, including field bindweed, gypsy-flower, Canadian thistle, spotted knapweed, and hoary alyssum were mapped within the site in 2014. It is currently estimated that noxious weeds cover greater than 5 percent of the upland buffer within the conservation easement area. MDT will need to continue to implement weed control measures to meet this criteria.
	Any area disturbed within creditable buffer zone must have at least 50 percent aerial cover of desirable upland plant species by end of monitoring period.	Y	Upland buffers surround wetland areas within the site exhibited greater than 50 percent aerial cover of non-weed species in 2014.
Weed Control	Implement weed control measures to minimize and/or eliminate infestations of state-listed noxious weed species within the site.	N	State-listed noxious weed species across the site have been estimated at greater than 5 percent absolute cover in 2014.
Fencing	Install wildlife-friendly fencing along the easement boundaries.	Y	Wildlife-friendly fencing has been installed around the easement boundaries and is in good condition.

MDT Wetland Mitigation Monitoring
Rostad Ranch
Meagher County, Montana

MDT WETLAND MITIGATION SITE MONITORING FORM

Project Site: Rostad Ranch Assessment Date/Time 7/17/2014

Person(s) conducting the assessment: Erik Nyquist

Weather: Sunny, approx. 75 degrees Location: Martinsdale, MT

MDT District: 5 Milepost:

Legal Description: T 8N R 11E Section(s) 12 and 13

Initial Evaluation Date: 8/21/2013 Monitoring Year: 2 #Visits in Year: 1

Size of Evaluation Area: 60 (acres)

Land use surrounding wetland:

Agriculture

HYDROLOGY

Surface Water Source: Groundwater, supplemental hydrology from ditch/headgate, surface runoff

Inundation: ☒ Average Depth: 0.5 (ft) Range of Depths: 0.25-3.5 (ft)

Percent of assessment area under inundation: 40 %

Depth at emergent vegetation-open water boundary: 0.5 (ft)

If assessment area is not inundated then are the soils saturated within 12 inches of surface: Yes

Other evidence of hydrology on the site (ex. – drift lines, erosion, stained vegetation, etc.):

Drainage patterns, soil saturation, water marks, drift deposits, iron deposits, surface soil cracks, algal mat, geomorphic position, positive FAC-neutral test.

Groundwater Monitoring Wells

Record depth of water surface below ground surface, in feet.

Well ID	Water Surface Depth (ft)
MW-1	

Additional Activities Checklist:

- ☒ Map emergent vegetation-open water boundary on aerial photograph.
- ☒ Observe extent of surface water during each site visit and look for evidence of past surface water elevations (drift lines, erosion, vegetation staining, etc.)
- ☒ Use GPS to survey groundwater monitoring well locations, if present.

Hydrology Notes:

MW-1 groundwater level at greater than 6 feet below ground surface, located in upland near levee.

VEGETATION COMMUNITIES

Site Rostad Ranch

(Cover Class Codes **0** = < 1%, **1** = 1-5%, **2** = 6-10%, **3** = 11-20%, **4** = 21-50% , **5** = >50%)

Community # 1 **Community Type:** Phleum pratense / Trifolium spp. **Acres** 45.6

Species	Cover class	Species	Cover class
Achillea millefolium	1	Amaranthus retroflexus	0
Ambrosia acanthicarpa	0	Aster sp.	0
Bare Ground	0	Bassia scoparia	3

Transect Notes:

PLANTED WOODY VEGETATION SURVIVAL

Rostad Ranch

Planting Type	#Planted	#Alive	Notes
Populus balsamifera	100	80	80% survival rate
Populus tremuloides	100	80	80% survival rate
Salix spp.	2000	1500	estimate approximately 75% survival

Comments

Willow stakes were planted in spring 2013 with observations of approximately 75% survival. Plants looked healthy with minimal browse. Approximately 80% survival for cottonwoods and aspen.

Rostad Ranch

WILDLIFE

Birds

Were man-made nesting structures installed? Yes

If yes, type of structure: Blue bird boxes

How many? 7

Are the nesting structures being used? Yes

Do the nesting structures need repairs? Yes

Nesting Structure Comments:

Box in NE corner of site needs repair.

Species	#Observed	Behavior	Habitat
American Robin	3	FO	SS, UP
American White Pelican	2	FO	OW
Bank Swallow	10	BD, F, FO, N	AB, OW, UP, US
Blue-winged Teal	1	F, L	OW
Common Grackle	8	FO, L	UP
Mallard	2	L, N	AB, OW
Northern Harrier	2	FO, N	UP, WM
Red-winged Blackbird	6	BP, BD, F, FO, L,	SS, UP, WM
Sandhill Crane	2	FO	WM
Wilson's Snipe	5	L, N	AB, MA, WM

Bird Comments

Swallows occupying bird boxes

BEHAVIOR CODES

BP = One of a breeding pair **BD** = Breeding display **F** = Foraging **FO** = Flyover **L** = Loafing **N** = Nesting

HABITAT CODES

AB = Aquatic bed **SS** = Scrub/Shrub **FO** = Forested **UP** = Upland buffer **I** = Island

WM = Wet meadow **MA** = Marsh **US** = Unconsolidated shore **MF** = Mud Flat **OW** = Open Water

Mammals and Herptiles

Species	# Observed	Tracks	Scat	Burrows	Comments
Boreal Chorus Frog	1	No	No	No

PHOTOGRAPHS

Take photographs of the following permanent reference points listed in the check list below. Record the direction of the photograph using a compass. When at the site for the first time, establish a permanent reference point by setting a ½ inch rebar or fencepost extending 2-3 feet above ground. Survey the location with a resource grade GPS and mark the location on the aerial photograph.

Photograph Checklist:

- ☒ One photograph for each of the four cardinal directions surrounding the wetland.
- ☒ At least one photograph showing upland use surrounding the wetland. If more than one upland exists then take additional photographs.
- ☒ At least one photograph showing the buffer surrounding the wetland.
- ☒ One photograph from each end of the vegetation transect, showing the transect.

Comments:

ADDITIONAL ITEMS CHECKLIST

Hydrology

- ☒ Map emergent vegetation/open water boundary on aerial photos.
- ☒ Observe extent of surface water. Look for evidence of past surface water elevations (e.g. drift lines, vegetation staining, erosion, etc).

Photos

- ☒ One photo from the wetland toward each of the four cardinal directions
- ☒ One photo showing upland use surrounding the wetland.
- ☒ One photo showing the buffer around the wetland
- ☒ One photo from each end of each vegetation transect, toward the transect

Vegetation

- ☒ Map vegetation community boundaries
- ☒ Complete Vegetation Transects

Soils

- ☒ Assess soils

Wetland Delineations

- ☒ Delineate wetlands according to applicable USACE protocol (1987 form or Supplement)
- ☒ Delineate wetland – upland boundary onto aerial photograph.

Wetland Delineation Comments

Slight increase in wetland area from 2013.

Functional Assessments

- ☒ Complete and attach full MDT Montana Wetland Assessment Method field forms.

Functional Assessment Comments:

Maintenance

Were man-made nesting structure installed at this site? Yes

If yes, do they need to be repaired? Yes

If yes, describe the problems below and indicate if any actions were taken to remedy the problems

Were man-made structures built or installed to impound water or control water flow
into or out of the wetland? Yes

If yes, are the structures in need of repair? No

If yes, describe the problems below.

One bent fence post near NE corner of site. The spillway out of the northern cell was intact and a minimal amount of water was flowing into the overflow rock drain.

WETLAND DETERMINATION DATA FORM – Great Plains Region

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

MDT Montana Wetland Assessment Form (revised March 2008)

1. Project name 2. MDT project# Control#
 3. Evaluation Date 4. Evaluators 5. Wetland/Site# (s)
 6. Wetland Location(s): T R Sec1 T R Sec2

Approx Stationing or Mileposts

Watershed Watershed/County

7. Evaluating Agency 8. Wetland size acres

Purpose of Evaluation

☐ Wetlands potentially affected by MDT project

☐ Mitigation Wetlands: pre-construction

☒ Mitigation Wetlands: post construction

☐ Other

How assessed:

9. Assessment area (AA) size (acres)

How assessed:

10. Classification of Wetland and Aquatic Habitats in AA

HGM Class (Brinson)	Class (Cowardin)	Modifier (Cowardin)	Water Regime	% of AA
Slope	Emergent Wetland	Excavated	Seasonal/Intermittent	60
Slope	Scrub-Shrub Wetland		Seasonal/Intermittent	5
Depressional	Unconsolidated Bottom	Excavated	Seasonal/Intermittent	35

11. Estimated Relative Abundance

12. General Condition of AA

i. Disturbance: (use matrix below to determine [circle] appropriate response – see instructions for Montana-listed noxious weed and aquatic nuisance vegetation species (ANVS) lists)

Conditions within AA	Predominant conditions adjacent to (within 500 feet of) AA		
	Managed in predominantly natural state; is not grazed, hayed, logged, or otherwise converted; does not contain roads or buildings; and noxious weed or ANVS cover is <=15%.	Land not cultivated, but may be moderately grazed or hayed or selectively logged; or has been subject to minor clearing; contains few roads or buildings; noxious weed or ANVS cover is <=30%.	Land cultivated or heavily grazed or logged; subject to substantial fill placement, grading, clearing, or hydrological alteration; high road or building density; or noxious weed or ANVS cover is >=30%.
AA occurs and is managed in predominantly natural state; is not grazed, hayed, logged, or otherwise converted; does not contain roads or occupied buildings; and noxious weed or ANVS cover is <=15%.	<input type="text" value="low disturbance"/>	<input type="text" value="low disturbance"/>	<input type="text" value="moderate disturbance"/>
AA not cultivated, but may be moderately grazed or hayed or selectively logged; or has been subject to relatively minor clearing, fill placement, or hydrological alteration; contains few roads or buildings; noxious weed or ANVS cover is <=30%.	<input type="text" value="moderate disturbance"/>	<input type="text" value="moderate disturbance"/>	<input type="text" value="high disturbance"/>
AA cultivated or heavily grazed or logged; subject to relatively substantial fill placement, grading, clearing, or hydrological alteration; high road or building density; or noxious weed or ANVS cover is >=30%.	<input type="text" value="high disturbance"/>	<input type="text" value="high disturbance"/>	<input type="text" value="high disturbance"/>

Comments: (types of disturbance, intensity, season, etc)

The wetland mitigation site was constructed in Fall 2012/Spring 2013. Extensive excavation occurred to create depressional areas and spread out water moving across site. Site was revegetated in Fall 2012/Spring 2013 with good growth observed during the first growing season (2013) following construction activities. Significant increase in vegetative growth observed in 2014 since the previous monitoring effort in 2013.

ii. Prominent noxious, aquatic nuisance, other exotic species:

iii. Provide brief descriptive summary of AA and surrounding land use/habitat

The AA is a historically drained wetland area/meadow that was heavily grazed by cattle. A drainage ditch bisected the property prior to wetland mitigation construction. Existing wetlands were expanded through construction activities with emergent and scrub-shrub wetland communities present. Surrounding land use includes transportation (county road, historic railroad berm), agriculture (hay production and cattle grazing), and the South Fork of the Musselshell River located to the north of the mitigation site.

13. Structural Diversity: (based on number of "Cowardin" **vegetated** classes present [do not include unvegetated classes], see #10 above)

Existing # of "Cowardin" Vegetated Classes in AA	Initial Rating	Is current management preventing (passive) existence of additional vegetated classes?		Modified Rating
>=3 (or 2 if 1 is forested) classes	H	NA	NA	NA
2 (or 1 if forested) classes	M	NA	NA	NA
1 class, but not a monoculture	M	<NO	YES>	L
1 class, monoculture (1 species comprises >=90% of total cover)	L	NA	NA	NA

Comments: Emergent and scrub-shrub vegetative communities on site.

SECTION PERTAINING to FUNCTIONS VALUES ASSESSMENT

14A. Habitat for Federally Listed or Proposed Threatened or Endangered Plants or Animals:

i. AA is Documented (D) or Suspected (S) to contain (check one based on definitions contained in instructions):

Primary or critical habitat (list species) ☐ D ☐ S

Secondary habitat (list Species) ☐ D ☐ S

Incidental habitat (list species) ☐ D ☐ S

No usable habitat ☒ S

ii. **Rating** (use the conclusions from i above and the matrix below to arrive at [check] the functional points and rating)

Highest Habitat Level	doc/primary	sus/primary	doc/secondary	sus/secondary	doc/incidental	sus/incidental	None
Functional Points and Rating	1H	.9H	.8H	.7M	.3L	.1L	0L

Sources for documented use USFWS list for Meagher County; no habitat specification present for species or documented occurrences.

14B. Habitat for plant or animals rated S1, S2, or S3 by the Montana Natural Heritage Program: (not including species listed in 14A above)

i. AA is Documented (D) or Suspected (S) to contain (check one based on definitions contained in instructions):

Primary or critical habitat (list species) ☒ D ☐ S Downingia laeta (S2S3)

Secondary habitat (list Species) ☒ D ☐ S Long-billed curlew (S3B); Mountain plover (S2B)

Incidental habitat (list species) ☐ D ☐ S

No usable habitat ☐ S

ii. **Rating** (use the conclusions from i above and the matrix below to arrive at [check] the functional points and rating)

Highest Habitat Level	doc/primary	sus/primary	doc/secondary	sus/secondary	doc/incidental	sus/incidental	None
S1 Species: Functional Points and Rating	1H	.8H	.7M	.6M	.2L	.1L	0L
S2 and S3 Species: Functional Points and Rating	.9H	.7M	.6M	.5M	.2L	.1L	0L

Sources for documented use Observed Downingia laeta in wetland during 2013/2014 site visits; past observations of curlew/plover

14C. General Wildlife Habitat Rating:

i. Evidence of overall wildlife use in the AA (check substantial, moderate, or low based on supporting evidence):

Moderate

Substantial (based on any of the following [check]):

- ☐ observations of abundant wildlife #s or high species diversity (during any period)
- ☐ abundant wildlife sign such as scat, tracks, nest structures, game trails, etc.
- ☐ presence of extremely limiting habitat features not available in the surrounding area
- ☐ interviews with local biologists with knowledge of the AA

Minimal (based on any of the following [check]):

- ☐ few or no wildlife observations during peak use periods
- ☐ little to no wildlife sign
- ☐ sparse adjacent upland food sources
- ☐ interviews with local biologists with knowledge of the AA

Moderate (based on any of the following [check]):

- ☒ observations of scattered wildlife groups or individuals or relatively few species during peak periods
- ☐ common occurrence of wildlife sign such as scat, tracks, nest structures, game trails, etc.
- ☒ adequate adjacent upland food sources
- ☐ interviews with local biologists with knowledge of the AA

ii. **Wildlife** habitat features (Working from top to bottom, check appropriate AA attributes in matrix to arrive at rating. Structural diversity is from #13. For class cover to be considered evenly distributed, the most and least prevalent **vegetated** classes must be within 20% of each other in terms of their percent composition of the AA (see #10). Abbreviations for surface water durations are as follows: P/P = permanent/perennial; S/I = seasonal/intermittent; T/E = temporary/ephemeral; and A = absent [see instructions for further definitions of these terms])

Structural diversity (see #13)	High								Moderate								Low			
	Even				Uneven				Even				Uneven				Even			
Class cover distribution (all vegetated classes)																				
Duration of surface water in ≥ 10% of AA	P/P	S/I	T/E	A	P/P	S/I	T/E	A	P/P	S/I	T/E	A	P/P	S/I	T/E	A	P/P	S/I	T/E	A
Low disturbance at AA (see #12)	E	E	E	H	E	E	H	H	E	H	H	M	E	H	M	M	E	H	M	M
Moderate disturbance at AA (see #12)	H	H	H	H	H	H	H	M	H	H	M	M	H	M	M	L	H	M	L	L
High disturbance at AA (see #12)	M	M	M	L	M	M	L	L	M	M	L	L	M	L	L	L	L	L	L	L

iii. **Rating** (use the conclusions from i and ii above and the matrix below to arrive at [check] the functional points and rating)

Evidence of wildlife use (i)	Wildlife habitat features rating (ii)											
	Exceptional			High			Moderate			Low		
Substantial		1E			.9H			.8H			.7M	
Moderate		.9H			.7M			.5M			.3L	
Minimal		.6M			.4M			.2L			.1L	

Comments

Moderate use of the AA area by wildlife observed.

14D. General Fish Habitat Rating: (Assess this function if the AA is used by fish or the existing situation is "correctable" such that the AA could be used by fish [i.e., fish use is precluded by perched culvert or other barrier, etc.]. If the AA is not used by fish, fish use is not restorable due to habitat constraints, or is not desired from a management perspective [such as fish entrapped in a canal], then check

☒ NA here and proceed to 14E.)

i. **Habitat Quality and Known / Suspected Fish Species in AA** (use matrix to arrive at [check the functional points and rating])

Duration of surface water in AA	Permanent / Perennial						Seasonal / Intermittent						Temporary / Ephemeral					
	Optimal		Adequate		Poor		Optimal		Adequate		Poor		Optimal		Adequate		Poor	
Aquatic hiding / resting / escape cover	O	S	O	S	O	S	O	S	O	S	O	S	O	S	O	S	O	S
Thermal cover optimal / suboptimal	O	S	O	S	O	S	O	S	O	S	O	S	O	S	O	S	O	S
FWP Tier I fish species	1E	.9H	.8H	.7M	.6M	.5M	.9H	.8H	.7M	.6M	.5M	.4M	.7M	.6M	.5M	.4M	.3L	.3L
FWP Tier II or Native Game fish species	.9H	.8H	.7M	.6M	.5M	.5M	.8H	.7M	.6M	.5M	.4M	.4M	.6M	.5M	.4M	.3L	.2L	.2L
FWP Tier III or Introduced Game fish	.8H	.7M	.6M	.5M	.5M	.4M	.7M	.6M	.5M	.4M	.4M	.3L	.5M	.4M	.3L	.2L	.2L	.1L
FWP Non-Game Tier IV or No fish species	.5M	.5M	.5M	.4M	.4M	.3L	.4M	.4M	.4M	.3L	.3L	.2L	.2L	.2L	.2L	.1L	.1L	.1L

Sources used for identifying fish sp. potentially found in AA:

ii. **Modified Rating** (NOTE: Modified score cannot exceed 1 or be less than 0.1)

a) Is fish use of the AA significantly reduced by a culvert, dike, or other man-made structure or activity or is the waterbody included on the current final MDEQ list of waterbodies in need of TMDL development with listed "Probable Impaired Uses" including cold or warm water fishery or aquatic life support, or do aquatic nuisance plant or animal species (see **Appendix E**) occur in fish habitat? Y ☐ N ☒ If yes, reduce score in i above by 0.1: **Modified Rating**

b) Does the AA contain a documented spawning area or other critical habitat feature (i.e., sanctuary pool, upwelling area, etc.- specify in comments) for native fish or introduced game fish? ☐ Y ☒ N If yes, add 0.1 to the adjusted score in i or iia above:

Modified Rating

iii. **Final Score and Rating:**

Comments: No perennially flowing water within AA for fish habitat. Potential warm water fishery in depressional area if water remains permanent/perennial in subsequent years.

14E. Flood Attenuation: (Applies only to wetlands subject to flooding via in-channel or overbank flow. If wetlands in AA are not flooded from in-channel or overbank flow, click ☒ NA here and proceed to 14F.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

Estimated or Calculated Entrenchment (Rosgen 1994, 1996)	Slightly entrenched - C, D, E stream types			Moderately entrenched - B stream type			Entrenched-A, F, G stream types		
% of flooded wetland classified as forested and/or scrub/shrub	75%	25-75%	<25%	75%	25-75%	<25%	75%	25-75%	<25%
AA contains no outlet or restricted outlet	1H	.9H	.6M	.8H	.7M	.5M	.4M	.3L	.2L
AA contains unrestricted outlet	.9H	.8H	.5M	.7M	.6M	.4M	.3L	.2L	.1L

Slightly Entrenched ER = >2.2			Moderately Entrenched ER = 1.41 - 2.2		Entrenched ER = 1.0 - 1.4	
C stream type	D stream type	E stream type	B stream type		A stream type	F stream type

Floodprone width / Bankfull width = Entrenchment ratio

ii. Are ≥10 acres of wetland in the AA subject to flooding AND are man-made features which may be significantly damaged by floods located within 0.5 mile downstream of the AA (check)? Y ☐ N ☒

Comments:

No flooding occurs via in-channel or overbank flow.

14F. Short and Long Term Surface Water Storage: (Applies to wetlands that flood or pond from overbank or in-channel flow, precipitation, upland surface flow, or groundwater flow. If no wetlands in the AA are subject to flooding or ponding, click ☐ NA here and proceed to 14G.)

i. **Rating** (Working from top to bottom, use the matrix below to arrive at [check] the functional points and rating. Abbreviations for surface water durations are as follows: P/P = permanent/perennial; S/I = seasonal/intermittent; and T/E = temporary/ephemeral [see instructions for further definitions of these terms].)

Estimated maximum acre feet of water contained in wetlands within the AA that are subject to periodic flooding or ponding	>5 acre feet			1.1 to 5 acre feet			≤1 acre foot		
Duration of surface water at wetlands within the AA	P/P	S/I	T/E	P/P	S/I	T/E	P/P	S/I	T/E
Wetlands in AA flood or pond ≥ 5 out of 10 years	1H	.9H	.8H	.8H	.6M	.5M	.4M	.3L	.2L
Wetlands in AA flood or pond < 5 out of 10 years	.9H	.8H	.7M	.7M	.5M	.4M	.3L	.2L	.1L

Comments: Depressional area and portions of slope wetlands maintain water perennially. Estimating approximately 10 acres inundated to 0.5 foot.

14G. Sediment/Nutrient/Toxicant Retention and Removal: (Applies to wetlands with potential to receive sediments, nutrients, or toxicants through influx of surface or ground water or direct input. If no wetlands in the AA are subject to such input, click ☐ **NA** here and proceed to 14H.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating [H = high, M = moderate, or L = low])

Sediment, nutrient, and toxicant input levels within AA	AA receives or surrounding land use with potential to deliver levels of sediments, nutrients, or compounds at levels such that other functions are not substantially impaired. Minor sedimentation, sources of nutrients or toxicants, or signs of eutrophication present.				Waterbody on MDEQ list of waterbodies in need of TMDL development for "probable causes" related to sediment, nutrients, or toxicants or AA receives or surrounding land use with potential to deliver high levels of sediments, nutrients, or compounds such that other functions are substantially impaired. Major sedimentation, sources of nutrients or toxicants, or signs of eutrophication present.			
% cover of wetland vegetation in AA	≥ 70%		< 70%		≥ 70%		< 70%	
Evidence of flooding / ponding in AA	Yes	No	Yes	No	Yes	No	Yes	No
AA contains no or restricted outlet	1H	.8H	.7M	.5M	.5M	.4M	.3L	.2L
AA contains unrestricted outlet	.9H	.7M	.6M	.4M	.4M	.3L	.2L	.1L

Comments: Approximately 60 percent of the AA is vegetated. A restricted outlet is located on the depressional area as a constructed overflow channel.

14H Sediment/Shoreline Stabilization: (Applies only if AA occurs on or within the banks of a river, stream, or other natural or man-made drainage, or on the shoreline of a standing water body which is subject to wave action. If 14H does not apply, click ☐ **NA** here and proceed to 14I.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

% Cover of wetland streambank or shoreline by species with stability ratings of ≥6 (see Appendix F).	Duration of surface water adjacent to rooted vegetation					
	Permanent / Perennial		Seasonal / Intermittent		Temporary / Ephemeral	
≥ 65%	1H		.9H		.7M	
35-64%	.7M		.6M		.5M	
< 35%	.3L		.2L		.1L	

AA supports open water areas subject to wave action.

Comments:

14I. Production Export/Food Chain Support:

i. **Level of Biological Activity** (synthesis of wildlife and fish habitat ratings [check])

General Fish Habitat Rating (14D.iii.)	General Wildlife Habitat Rating (14C.iii.)					
	E/H		M		L	
E/H	H		H		M	
M	H		M		M	
L	M		M		L	
N/A	H		M		L	

ii. **Rating** (Working from top to bottom, use the matrix below to arrive at [check] the functional points and rating. Factor A = acreage of vegetated wetland component in the AA; Factor B = level of biological activity rating from above (14I.i.); Factor C = whether or not the AA contains a surface or subsurface outlet; the final three rows pertain to duration of surface water in the AA, where P/P, S/I, and T/E are as previously defined, and A = "absent" [see instructions for further definitions of these terms].)

A	Vegetated component >5 acres						Vegetated component 1-5 acres						Vegetated component <1 acre					
	High		Moderate		Low		High		Moderate		Low		High		Moderate		Low	
B	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No
C	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No
P/P	1E	.7H	.8H	.5M	.6M	.4M	.9H	.6M	.7H	.4M	.5M	.3L	.8H	.6M	.6M	.4M	.3L	.2L
S/I	.9H	.6M	.7H	.4M	.5M	.3L	.8H	.5M	.6M	.3L	.4M	.2L	.7H	.5M	.5M	.3L	.3L	.2L
T/E/A	.8H	.5M	.6M	.3L	.4M	.2L	.7H	.4M	.5M	.2L	.3L	.1L	.6M	.4M	.4M	.2L	.2L	.1L

iii. **Modified Rating** (NOTE: Modified score cannot exceed 1 or be less than 0.1.) **Vegetated Upland Buffer (VUB):** Area with ≥ 30% plant cover, ≤ 15% noxious weed or ANVS cover, and that is not subjected to periodic mechanical mowing or clearing (unless for weed control).

a) Is there an average ≥ 50 foot-wide vegetated upland buffer around ≥ 75% of the AA circumference? Y ☒ N ☐ If yes, add 0.1 to the score in ii above and adjust rating accordingly: **Modified Rating** .6M

Comments: Moderate biological activity; no fish habitat; vegetative component >5 acres with a upland buffer.

14J. Groundwater Discharge/Recharge: (check the appropriate indicators in i & ii below)

i. Discharge Indicators

- ☒ The AA is a slope wetland
- ☒ Springs or seeps are known or observed
- ☒ Vegetation growing during dormant season/drought
- ☒ Wetland occurs at the toe of a natural slope
- ☐ Seeps are present at the wetland edge
- ☒ AA permanently flooded during drought periods
- ☒ Wetland contains an outlet, but no inlet
- ☐ Shallow water table and the site is saturated to the surface
- ☐ Other:

ii. Recharge Indicators

- ☐ Permeable substrate present without underlying impeding layer
- ☐ Wetland contains inlet but no outlet
- ☐ Stream is a known 'losing' stream; discharge volume decreases
- ☐ Other:

iii. Rating (use the information from i and ii above and the table below to arrive at [check] the functional points and rating)

Criteria	Duration of saturation at AA Wetlands <i>FROM GROUNDWATER DISCHARGE OR WITH WATER THAT IS RECHARGING THE GROUNDWATER SYSTEM</i>			
	P/P	S/I	T	None
Groundwater Discharge or Recharge	1H	.7M	.4M	.1L
Insufficient Data/Information	NA			

Comments: Seasonal water regime within AA.

14K. Uniqueness:

i. Rating (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

Replacement potential	AA contains fen, bog, warm springs or mature (>80 yr-old) forested wetland or plant association listed as "S1" by the MTNHP			AA does not contain previously cited rare types and structural diversity (#13) is high or contains plant association listed as "S2" by the MTNHP			AA does not contain previously cited rare types or associations and structural diversity (#13) is low-moderate		
	rare	common	abundant	rare	common	abundant	rare	common	abundant
Low disturbance at AA (#12i)	1H	.9H	.8H	.8H	.6M	.5M	.5M	.4M	.3L
Moderate disturbance at AA (#12i)	.9H	.8H	.7M	.7M	.5M	.4M	.4M	.3L	.2L
High disturbance at AA (#12i)	.8H	.7H	.6M	.6M	.4M	.3L	.3L	.2L	.1L

Comments:

14L. Recreation/Education Potential: (affords "bonus" points if AA provides recreation or education opportunity)

i. Is the AA a known or potential rec./ed. site: (check) ☒ Y ☐ N (if 'Yes' continue with the evaluation; if 'No' then click ☐ NA here and proceed to the overall summary and rating page)

ii. Check categories that apply to the AA: ☒ Educational/scientific study; ☐ Consumptive rec.; ☒ Non-consumptive rec.; ☐ Other

iii. Rating (use the matrix below to arrive at [check] the functional points and rating)

Known or Potential Recreation or Education Area	Known	Potential
Public ownership or public easement with general public access (no permission required)	.2H	.15H
Private ownership with general public access (no permission required)	.15H	.1M
Private or public ownership without general public access, or requiring permission for public access	.1M	.05L

Comments:

Currently no recreation/education occurs at the site.

General Site Notes

A supplemental hydrology source was identified during the 2014 site visit. In the northeast corner of the site along the southern boundary, water is entering the site from the ditch located upslope. This additional hydrology resulted in wetland acreage increase in 2014.

FUNCTION & VALUE SUMMARY & OVERALL RATING FOR WETLAND/SITE #(S): Rostad Ranch - created and existing wetland

Function & Value Variables	Rating	Actual Functional Points	Possible Functional Points	Functional Units: (Actual Points x Estimated AA Acreage)	Indicate the four most prominent functions with an asterisk (*)

Totals:		4.65	9	66.96	
Percent of Possible Score			51.67 %		

Category I Wetland: (must satisfy **one** of the following criteria; otherwise go to Category II)

- ☐ Score of 1 functional point for Listed/Proposed Threatened or Endangered Species; **or**
- ☐ Score of 1 functional point for Uniqueness; **or**
- ☐ Score of 1 functional point for Flood Attenuation **and** answer to Question 14E.ii is "yes"; **or**
- ☐ Percent of possible score > 80% (round to nearest whole #).

Category II Wetland: (Criteria for Category I not satisfied **and** meets any **one** of the following criteria; otherwise go to Category IV)

- ☐ Score of 1 functional point for MT Natural Heritage Program Species Habitat; **or**
- ☐ Score of .9 or 1 functional point for General Wildlife Habitat; **or**
- ☐ Score of .9 or 1 functional point for General Fish Habitat; **or**
- ☐ "High" to "Exceptional" ratings for **both** General Wildlife Habitat **and** General Fish/Aquatic Habitat; **or**
- ☐ Score of .9 functional point for Uniqueness; **or**
- ☒ Percent of possible score > 65% (round to nearest whole #).

Category III Wetland: (Criteria for Categories I, II, or IV not satisfied)

☐

Category IV Wetland: (Criteria for Categories I or II are not satisfied and all of the following criteria are met; otherwise go to Category III)

- ☐ "Low" rating for Uniqueness; **and**
- ☐ Vegetated wetland component < 1 acre (do not include upland vegetated buffer); **and**
- ☐ Percent of possible score < 35% (round to nearest whole #).

OVERALL ANALYSIS AREA RATING:

NOTES

TEMPORARY EROSION AND SEDIMENT CONTROL

REFER TO SECTION 208 OF THE MDT DETAILED DRAWINGS FOR EROSION AND SEDIMENT CONTROL BEST MANAGEMENT PRACTICES. INSTALL TEMPORARY EROSION CONTROL MEASURES AS DEEMED NECESSARY BY THE ENGINEER. PAYMENT TO BE DETERMINED BY USING THE EROSION AND SEDIMENT CONTROL RATE SCHEDULE AND PAID FOR UNDER MISCELLANEOUS WORK. ALL INSTALLED TEMPORARY EROSION CONTROL BLANKETS MUST BE COMPOSED AND CONSTRUCTED OF 100% BIODEGRADABLE FIBERS, NETTING, AND STITCHING.

SOILS INFORMATION

TO OBTAIN THE COMPLETE SOILS INFORMATION CONTACT THE MDT GEOTECHNICAL SECTION AT (406) 444-6281.

UTILITIES

CONTACT THE UTILITIES UNDERGROUND LOCATION CENTER (1-800-424-5555) OR OTHER NOTIFICATION SYSTEM FOR THE MARKING AND LOCATION OF ALL LINES AND SERVICES BEFORE EXCAVATING.

CLEARING AND GRUBBING

CLEAR AND GRUB TO STAKED GRADING LIMITS. INCLUDE THE COST OF CLEARING AND GRUBBING IN THE UNIT PRICE BID FOR UNCLASSIFIED EXCAVATION.

TOPSOIL SALVAGING AND PLACING

TOPSOIL QUANTITIES SHOWN IN THE PLANS ARE SUFFICIENT TO RE-TOPSOIL IN AREAS WHERE CUTS OR FILLS EXCEED 1 FOOT. ALL REMAINING GRADING IS CONSIDERED UNCLASSIFIED EXCAVATION.

PIEZOMETER REMOVAL

SEE SHEET 10 FOR LOCATIONS OF PIEZOMETERS ON THE PROJECT. ABANDON WELLS IN ACCORDANCE WITH ARM 36.21.810.

WETLANDS

ONLY WETLANDS WITHIN THE PROJECT LIMITS HAVE BEEN DELINEATED. WETLANDS MAY EXIST BEYOND THE PROJECT LIMITS AND ANY ACTION AFFECTING SUCH WETLANDS IS THE RESPONSIBILITY OF THE CONTRACTOR.

WETLANDS LEGEND

COMBINATION SCALE FACTOR

ALL SURVEY AND STAKING WILL REQUIRE THE USE OF A COMBINATION SCALE FACTOR (CSF) 0.99922160. ALL DIMENSIONS ON THE PLANS ARE GRID DIMENSIONS AND MUST BE DIVIDED BY THE CSF TO ARRIVE AT GROUND DIMENSIONS.

SURVEY DATA

DTM FILES FORMATTED FOR TRIMBLE, LEICA, AND TOPCON SURVEY CONTROLLERS ARE AVAILABLE UPON REQUEST. CONTACT WADE SALTARDS, MDT WETLAND ENGINEER, AT 444-0451.

CONTROL DIAGRAM

77E
△

Control marks 1 through 7 were established to provide control in the areas of future wetlands mitigation. MDT secondary control procedures were used to establish the state plane coordinates and GPS derived orthometric heights of the new control.

Coordinates shown hereon are referenced to the Montana Coordinate System NAD83(1992), International feet. Elevations are referenced to NAVD83, U.S. Feet (Geoid03). Redundant GPS RTK methods of survey were used to tie this survey to MDT control survey CN 4889, which was tied to the National Spatial Reference System through first-order order or better control points "A 295", "B80RESE1" and "K812", using GPS static procedures with dual-frequency GPS receivers.

In order to maintain a relative accuracy of 1:50,000, one Combination Scale Factor can be used for this project: .99922160, which is the Combination Scale Factor for CN 4889.

CONTROL MARK ABSTRACT				
POINT NAME/NUMBER	N OR Y COORDINATE	E OR X COORDINATE	POINT ELEVATION	LOCATION AND DESCRIPTION
2JEB	820171.107	1755842.913	4837.33	FOUND USGS BENCHMARK, FROM THE JUNCTION OF HIGHWAY 194 AND 12, 60.7 MILES WEST ALONG HIGHWAY 12. THE MARK IS 95' NORTHWEST OF AND 60' SOUTHWEST OF "T" ROAD GOING NORTH OFF OF HIGHWAY 12, 71' WEST OF AN IRRIGATION DITCH CROSSING HIGHWAY 12, 1' NORTH OF SOUTH R/W FENCE AND POST WITH SURVEY MARKER SIGN, BRASS CAP STAMPED "2-JEB, 1972."
77E	815626.843	1773445.444	4735.58	FOUND MDT CONTROL CAP AT WP 77.55, A STANDARD MDT CONTROL CAP ON 5/8" REBAR 0.3m BELOW GROUND, STAMPED "77E 2003". CAP IS 250' NORTH OF THE P/R, 195' NORTH OF CORNER IN NORTH R/W FENCE WEST OF THE NORTH ROAD TO MARTINDALE HUTTENRICH COLONY, 60' WEST OF WEST FENCE ALONG THE ROAD, 40' WEST OF AN IRRIGATION DITCH, 15' EAST OF A POWER POLE, "AP B", AND ON HIGH POINT ABOVE AN IRRIGATION DITCH. WITNESS POSTS SET 7' NORTH AND SOUTH.
1	807908.694	175815.256	4781.01	SET MDT CONTROL CAP, FLUSH WITH GROUND, STAMPED "1 2008". MARK IS 2.6' NORTH OF THE SOUTH ROW FENCE OF MARTINDALE ROAD, 15' WEST OF AN APPROACH, AND 2.6' NORTH OF A WITNESS POST.
2	808455.543	1769626.308	4770.81	SET MDT CONTROL CAP, FLUSH WITH GROUND, STAMPED "2 2008". MARK IS 2' SOUTH OF THE SOUTH ROW FENCE OF MARTINDALE ROAD, 7.3' WEST OF A FENCE CORNER, 35' WEST OF AN APPROACH, AND 2' SOUTH OF A WITNESS POST.
3	808076.674	1768751.648	4775.16	SET MDT CONTROL CAP, FLUSH WITH GROUND, STAMPED "3 2008". MARK IS 100' SOUTH OF THE SOUTH ROW FENCE OF MARTINDALE ROAD, AND 2' NORTH OF A WITNESS POST.
4	807615.353	1756864.291	4787.63	SET MDT CONTROL CAP, FLUSH WITH GROUND, STAMPED "4 2008". MARK IS 3' SOUTH OF THE SOUTH ROW FENCE OF MARTINDALE ROAD, 450' EAST OF A DIVERSION STRUCTURE, AND 2' SOUTH OF A WITNESS POST.
5	807432.042	1769072.531	4808.98	SET MDT CONTROL CAP, FLUSH WITH GROUND, STAMPED "5 2008". MARK IS 2' NORTH OF AN EAST-WEST FENCE, AND 2' SOUTH OF A WITNESS POST.
6	806616.942	1768550.880	4806.07	SET MDT CONTROL CAP, FLUSH WITH GROUND, STAMPED "6 2008". MARK IS IN AN OPEN FIELD, 30' EAST OF AN IRRIGATION CANAL, AND 2' SOUTH OF A WITNESS POST.
7	805635.871	1768165.498	4812.40	SET MDT CONTROL CAP, FLUSH WITH GROUND, STAMPED "7 2008". MARK IS ON TOP OF THE EAST BANK OF CANAL, 40' NORTH OF AN EAST-WEST FENCE, 120' SOUTHEAST OF CONCRETE DIVERSION STRUCTURE, AND 2' SOUTH OF A WITNESS POST.

CONCEPTUAL REVEGETATION PLAN

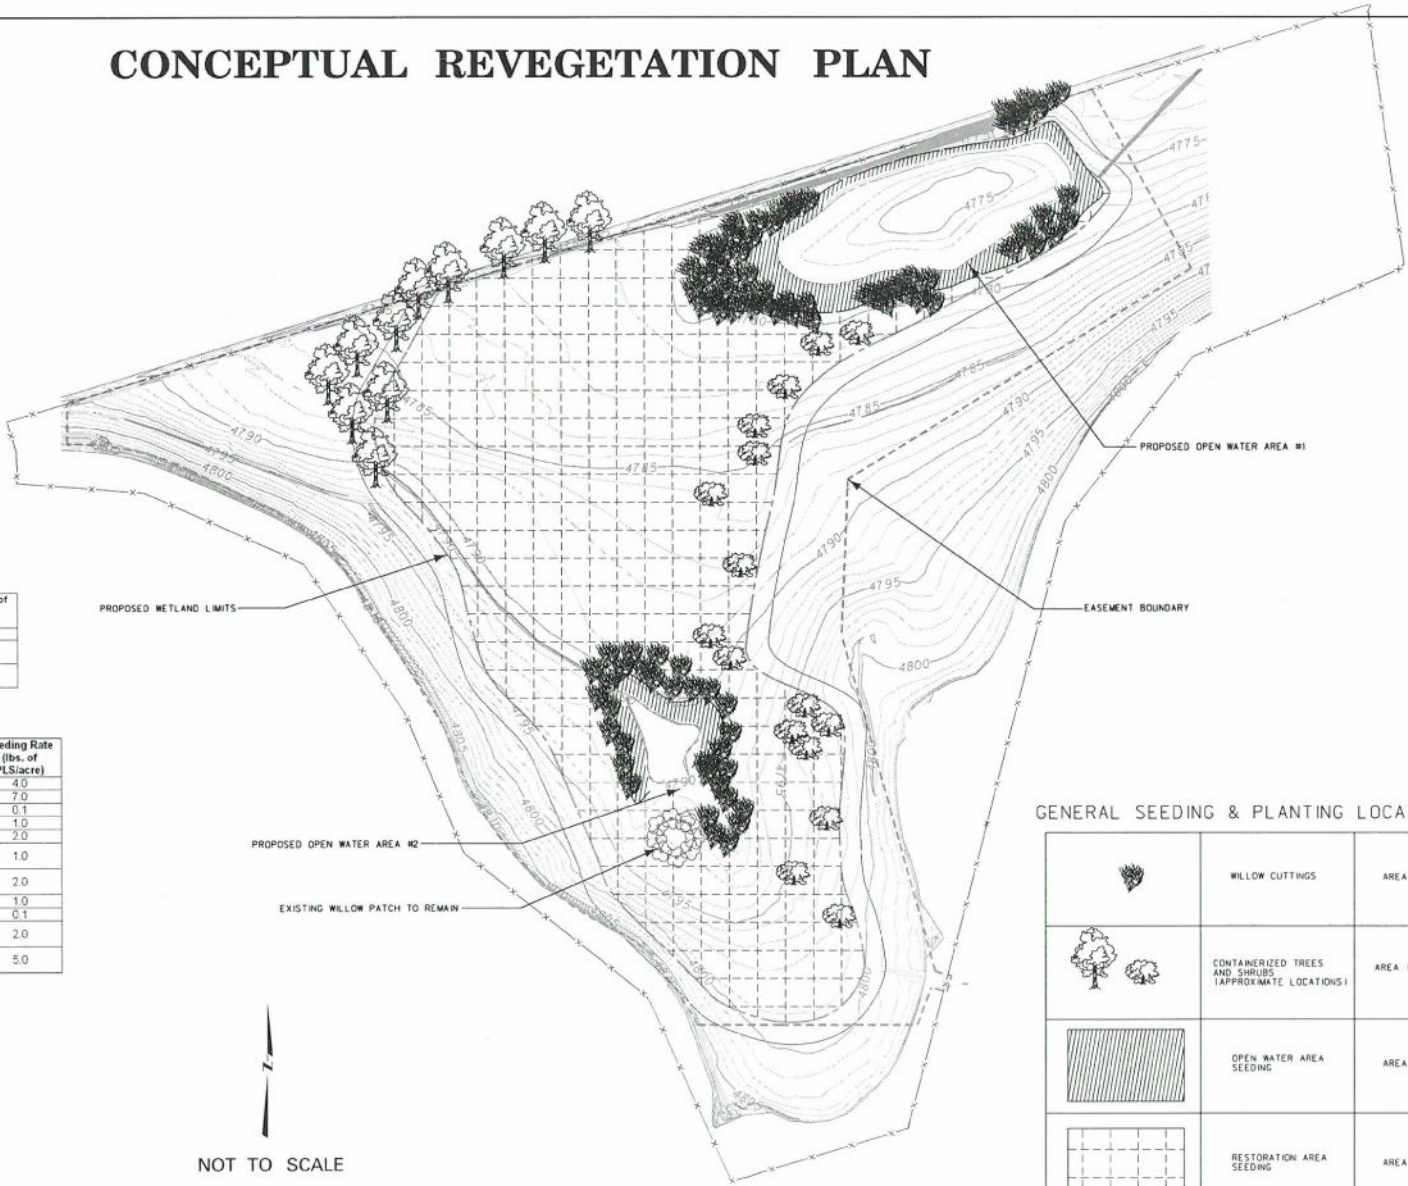

Table 1. Live Plantings				
Area Descriptions 16A	Species - Common Name	Species - Scientific Name	Planting Methodology	Number of Plants*
2	Willows**	Salix species	Cuttings	2,000
1, 3	quaking aspen	Populus tremuloides	Containerized trees (5 gallon)	100
	black cottonwood	Populus balsamifera	Containerized trees (5 gallon)	100

*Plant locations to be provided in the field by MDT personnel.
** Willow cuttings should be from a variety of species found in the region.

Table 2. Seed Mixtures			
Area Descriptions 16A	Species - Common Name	Species - Scientific Name	Seeding Rate (lbs. of PL/acre)
Wetland Seed Mixture - Open Water Areas (2)	American marshgrass	Glyceria grandis	4.0
	American sloughgrass	Beckmannia syzigachne	7.0
	Baltic rush	Juncus balticus	0.1
	Beaked sedge	Carex utriculata	1.0
	Nebraska sedge	Carex nebrascensis	2.0
	Northern tufted hairgrass	Deschampsia cespitosa	1.0
Wetland Seed Mixture - Restoration Area (1)	Northern tufted hairgrass	Deschampsia cespitosa	2.0
	Bluejoint reedgrass	Calamagrostis canadensis	1.0
	Baltic rush	Juncus balticus	0.1
	Prior slender wheatgrass	Elymus trachycaulis	2.0
	Rosana western wheatgrass	Pascopyrum smithii	5.0

Seed application rate by drill seeding (rates double for broadcast seeding)

GENERAL SEEDING & PLANTING LOCATIONS

	WILLOW CUTTINGS	AREA 2
	CONTAINERIZED TREES AND SHRUBS (APPROXIMATE LOCATIONS)	AREA 1 & 3
	OPEN WATER AREA SEEDING	AREA 2
	RESTORATION AREA SEEDING	AREA 1
