Appendix E

Consultation and Coordination, Public Involvement
Libby North Corridor Study

Public Information Meeting Technical Memorandum

October 17th, 2006

SUBJECT: Public Information Meeting Technical Memorandum

TO: Montana Department of Transportation

FROM: Parsons Brinckerhoff (PB)

Authors: Pam Murray (PB), Ron Clegg (PB), Stewart Lamb (PB)

Goals of the Public Information Meeting

• To inform the public of the study and to explain how their input is needed to identify issues along the corridor.
• To obtain a better understanding of the roadway users, local interest of the road, and future needs of the corridor.
• To discuss potential improvements for the roadway.
• To provide education about corridor planning in general and specifically how it applies to this study.

Meeting Description & Context

Lincoln County requested the public meetings be a formal presentation given by the project team. The County also recommended that a question and answer period be allowed to generate public participation and a informal open house setting could follow the question and answer period. The October 17th meeting followed the recommendations of Lincoln County. A PowerPoint presentation was provided by PB with additional comments provided by MDT staff. A question and answer session followed the formal PowerPoint presentation. Then the public was invited to provide written comments on comment cards or write directly on aerial maps of the study corridor. This was the first public information meeting related to the Libby North Corridor Study. There were 23 people signed in and 5 written comments were received at the meeting. Some attendees indicated that they would mail their comment cards later.

Meeting Location: The meeting was held October 17 from 6 p.m. to 8 p.m. at Libby City Hall in the Ponderosa Room, 952 E. Spruce Street.

Audience: Those in attendance included property owners along the corridor, business owners, residents of Libby, and representatives from special interest groups. Copies of the sign-in sheets are included in the appendix as part of these meeting notes.
Public Notification:
Letters were sent to property owners two weeks before the meeting. Additional notification was put out by MDT’s PI office in a state-wide press release, notification was posted on the study website, and paid advertising was put in the Montanian and The Western News:

NOTE: A local reporter misrepresented the starting time in an article they wrote about the upcoming meeting. Consequently, two attendees came to meeting before the actual start time. The reporter based her information on the press release but posted the time as one hour earlier. This article is in the appendix.

Meeting Format:
A thirty minute formal PowerPoint presentation was given by Ron Clegg (PB) with assistance from Shane Stack, Lynn Zanto, and Jean Riley, all of MDT. Shane opened the meeting and provided background to the project. A copy of the PowerPoint presentation is included in the appendix. The PowerPoint served as a guide for discussion, to provide information, and to stimulate public participation. The public provided comments and participated in the discussion. Following the presentation Ron opened the meeting to questions. A summary of the questions and answers is below. The public was then invited to tables with the aerial maps and asked to write comments directly on the maps. Project staff was available to answer questions and assist with writing comments.

Handouts Include:
The handouts provided to the public at the meeting include the newsletter, a study area map, the list of Frequently Asked Questions (FAQ) and comment forms.

Project Team attendees at the Meeting: Shane Stack (MDT), Lynn Zanto (MDT), Jean Riley (MDT), Tom Kahle (MDT). Ron Clegg (PB), Stewart Lamb (PB), and Pam Murray(PB).

Meeting Summary
23 people signed in and attended the meeting. Approximately 5 corridor property owners attended with 15 other Libby residents. The other 3 attendees were from Lincoln County and the Forest Service. A total of 5 written comment forms were turned in at the meeting. Copies of the sign in sheet and power-point presentation are in the appendix.

Shane Stack (MDT) opened the meeting and provided a background to the history of HWY 567 Pipe Creek Road study. This need for improvement was first identified by Lincoln County through the County’s secondary roads nomination process. This nomination process is how local governments make MDT aware of their priorities for local transportation improvements. Originally, the Pipe Creek Road study of 2002 was proposed as a major project which anticipated widening and reconstruction. The project proceeded forward in this direction and survey work and initial environmental analysis was initiated. The project area that was considered for this original major project was from the Bobtail Cutoff Road, MP 6.1, to Loon Lake Road, MP 17.
During implementation of the major project on Pipe Creek, a Court’s ruling of a lawsuit regarding the Rock Creek Mine in the Cabinet-Yaak area brought the Pipe Creek project to a stop. The reason for this is because the Court’s ruling indicated no additional loss of grizzly bears can be handled in the Cabinet-Yaak ecosystem without placing the future existence of the grizzly bears in a precarious situation. Transportation projects shown to increase direct and indirect impacts to grizzly bears that could result in a grizzly loss have the potential to create a significant liability for the permitting agency. MDT evaluated the ruling and its impacts on Pipe Creek and decided not to proceed with the project as originally planned, but instead to step back and propose a planning study that would first identify the environmental, engineering and safety issues to determine if a project is feasible for the corridor. The result of the step back is the current planning study, which is a good approach because this process includes meeting with the public, identifying issues and thoroughly identifying the significant environmental constraints.

Shane provided a background into the current funding situation for Pipe Creek Road. He indicated that costs to do an EIS are increasing as well as construction costs but the pool the funding is not increasing to keep up with these costs. Total reconstruction of the roadway is very costly given the geotechnical issues, stream crossing, and widening the road to 26 feet would require additional right of way. The environmental issues associated with a full reconstruction would be very significant.

The corridor planning process was explained and discussed. Lynn provided insight on MDT’s approach to corridor planning for this study. Lynn indicated that the planning process is useful in this situation since the original project was deemed to be too costly and impactive and MDT wanted to look closely at the corridor to identify the problems and see what could possibly be done.

Jean provided input regarding the grizzly bear recovery zone. She indicated that the study is in the distribution area but outside the recovery zone. The recovery zone is important because of regulations governing the impacts to grizzly bears and habitat. The Silver Creek lawsuit also has heightened the awareness of the recovery zone. Jean indicated the grizzly recovery zone boundary on the map needs to be updated to the current Forest Service maps.

Ron told the audience that this public meeting is the first of two public meetings. The second public meeting will be held in March 2007. The purpose of the second meeting will be to present the study findings and facilitate discussion on the potential improvement options identified for the corridor.

Summary of Questions and Answers
The following is a summary of the questions and answers discussion that followed the formal presentation.

Questions asked by the Public:

Why study just a 14-mile segment of the roadway?
Shane indicated the project limits were defined in this way because the road can be more fully improved to mile post 6.1. North of 20.1 is the grizzly bear recovery area, which because of the Silver Creek Mine lawsuit, transportation improvements will be difficult to achieve. It was indicated to the public that Western Federal lands has a project north of our corridor and the project is currently on hold until the outcomes of the corridor plan are finalized.

What roadway design standards are required to be met? Can they be met on this road? Are there allowable exceptions? Can spot improvements be done?

Shane discussed the federal requirements for roadway widening and improvements. He stated the widening standards would be a 12 foot road with 2 foot shoulders and a 4/1 slope for cuts and fills. A number of curves on the roadway do not meet federal requirements for sight distances and therefore they would need to be brought into conformance. Improvement projects would need to comply with federal environmental standards for projection of endangered species, which would require significant coordination the Fish & Wildlife Service for bull trout, grizzlies, and other protected wildlife.

Shane said the environmental constraints of the corridor are significant. A meeting will be held on October 19th with the regulatory agencies to determine the extent of the constraints. He indicated it would be would be a difficult and very costly task to fully reconstruct the corridor.

Shane also talked about design exceptions because the public wanted to know if spot improvements could be done without having to bring the entire road up to standard. The public gave the example of the patch and seal project that the Forest Service did a few years ago. They said that project was a success and that it helped significantly. The public wanted to know if other similar things could be done. Their greatest concern is safety and if safety can be improved by spot improvements then maybe that is the best improvement project they can hope for given the high cost and environmental constraints.

Shane indicated that design exceptions can be considered for the corridor. The process is somewhat cumbersome and a good justification will be required.

In this planning process, will alternatives be identified? Will they be based on cost, environmental issues, safety issues, and maintenance options?

Because this is a planning study we can look at all the potential improvement options that meet the needs of the corridor. We are at the point of identifying the issues and concerns and doing preliminary engineering and environmental analysis.

Will this study address the whole road or just issues?

This study addresses the issues and concerns that are identified in the study area. Recommendations will be made as a result of the study. Potential improvements will be considered if they are both feasible and warranted for the study area.

What are the costs of making improvements?

Shane indicated a ballpark cost of 25 to 35 million dollars for a full rebuild effort. The costs to do these projects are continuing to increase while the available funds are not increasing. Money for this project is made available on a competitive basis.

If you use State only dollars, then what?
It is difficult to obtain funds purely from the State. The problem is the lack of funds at the State level and the large number of projects that compete for those funds. If somehow State funds were obtained for the project and spot improvements were the recommended course of action, we would still be required to make improvements in accordance with MEPA which is similar to NEPA environmental federal standards.

- If a total reconstruct is so expensive are there enough funds for the project?
  No funds are currently available for the full rebuild project. It might be easier to obtain funds for spot improvements that are not as expensive to construct. We will not lower the design speeds just to get something done.

- If the full reconstruct is too costly now then what can be done in the future?
  This is what the corridor planning study is trying to accomplish. Hopefully, we can identify a few options that are cost effective and address the needs of the corridor. The goal of this project is to choose and spend wisely.

- After this feasibility study is completed done, then what?
  It will probably take 5 to 7 years from now for the planning, environmental work and then construction can begin. The environmental document will take time, right of way acquisitions also take time. However, some short term improvements can happen as a result of this study that can help.

**Issues and Comments by the Public**

The following issues were identified as a result of the public meeting, from comment cards, and from comments written on the aerial maps

- Pipe Creek road is the most direct access for emergency services to the Yaak.
- A few issues were raised by a commercial trucker who uses the road daily and all year round:
  - The roadway safety is the most important concern. Winter travel is the most dangerous time to travel. The road is in many areas is not wide enough. The roadway curves are dangerous. As a commercial driver, poor roadbed issues are hard on the equipment. There have been a number of close mishaps with other motorists. Increase in population is a concern for capacity on such a small roadway. If the road is only improved to Turner Mountain then the roadway north of there will be more of a hazard because is will continue to deteriorate. The road violated driver expectation in many areas. The road is “Not a good thing the way it is.”
  - If nothing is done the pavement in 5 years will be worse (very poor).
  - The road has no center line to separate traffic. Most people drive in the middle of the road and oncoming traffic poses a danger as it drifts into existing traffic.
  - There are a number of blind corners.
  - In the winter time, the snow plow only plows one lane and it is very dangerous to have only one lane open with oncoming traffic. This is becoming a bigger problem all the time since the interest in the ski resort is growing.
  - Snow storage and the removal of snow is an issue for the corridor.
  - Recreational traffic to access the forest lands is increasing roadway traffic.
• The aesthetics of roadway improvements is a concern.
• Recent overlay by the Forest Service was a big improvement.
• Heavy water build up on spring just south of East Fork Pipe Creek
• If MDT waits too long to do anything on Pipe Creek the costs would be so high that projects could become unfeasible.
• Most people use the whole road because there is no center line.
• Issues identified near MP19-20
  o Need new guard rail
  o The roadway is narrow through this section
  o There are a number of short sight distances around curves.
  o The road often ices over in the shady spots
• Issues identified near MP 16
  o A narrow road with poor visibility and a blind hump.
• Issues identified near MP 13
  o A number of deer hits occurred in this area.
• Issues identified near MP 12-11
  o The roadway needs a wider clearing.
  o Current construction traffic is a problem in this area.
• Issues identified near MP 11
  o This area is known to have problems with rock fall.
• Issues identified near MP 9.5
  o This road is difficult to drive because the road leans away from curve.

• Recommended Improvements by the Public
• The public indicated that striping the roadway would be a significant help to improving driving safety on the roadway.
• Use minimal standards and design exceptions to mitigate for potential impacts at various spot locations.
• A recommendation was made to clear the corridor by removing brush, trees that are located too close to the roadway.
• Do something to address the shady areas near MP 19-20 that allow icy conditions to occur on roadway.
• Roadway pavement and surface improvements needed throughout the corridor. The public liked what the Forest Service did in improving the road.
• Maintain top speed of roadway between 45mph and 55 mph.
• Improve snow removal and storage by allowing more than one lane to be open during the winter.
• Improve dangerous curves by improving sight distances.
• Improve the general safety of the corridor.
• New methods to remove snow like a snow-blower may work better than a plow.
• Parking is recommended for snowmobiles at the East Fork Pipe Creek.
• The current alignment is good.
• A band-aid approach to roadway improvements may be good enough for the corridor.
• The winter roadway maintenance, sanding, and plowing is getting better in the last few years but the County needs more money to make it safe.
• Improve the roadway area near the resort first. The area gets lots of winter use for autos and snowmobiles.

Corridor Planning Study Information

- MDT’s study will examine roadway deficiencies, design issues, financial feasibility, environmental issues, and capacity needs.
- Planning will prioritize the protection of environmental resources. Environmental resources unique to the project area include the following:
  - Grizzly Bear habitat conservation area.
  - Bull trout conservation area.
  - Lynx, wolf, native plants preservation area.

Schedule:
Step 1: Identify Issues; June-Aug. 2006
Step 2: Collect existing data and conduct a field review; Aug-Oct. 2006

Public Information Meeting Oct. 17
Step 3: Draft existing conditions report; Oct.-Nov 2006
Step 4: Identify potential improvement options; Nov-Jan 2007
Step 5: Draft Corridor Study Report (CSR); Feb. 2007

Public Information Meeting—to review CSR; Mar. 2007
Step 6: Final CSR; Apr 2007

We want to hear from you any:
- Issues, concerns and questions... you may have about this roadway

What is the purpose of this Corridor Planning Study?
The purpose of this study is to evaluate the existing conditions and determine if transportation improvements are needed to HWY 567 also known as Pipe Creek Road. The planning process will consider the needs of local residents in Libby, Yaak, along with property owners in the area and the traveling public. Part of the planning process entails an assessment of the sensitive environmental surroundings of this road as well as user safety, current condition, use and function, wildlife crossings, current and future traffic volumes, and speed. These findings will help determine any roadway deficiencies and guide the identification of any corridor improvements. This study will evaluate and recommend improvements if any are found to be needed.

What is the study area? (see map on the second page)
The study area encompasses the Hwy 567 between Bobtail Cutoff road and Turner Mountain Road, approximately mile post 6.1 to 20.1. This road is a primary access between Libby and Yaak.

How can the public/community contribute to the study?
The General Public is invited to participate in the process through public information meetings (see schedule to the left and below) and ongoing project information review and input. A project web site has been developed to provide on-line opportunities to comment on issues of HWY 567. Dates, times, and locations will be announced prior to the events through the local media and the project web site: http://www.mdt.mt.gov.

Those with a specific interest in the project are encouraged to join the project mailing list. They can do so by submitting their name and contact information to Tom Kahle at the address or email shown, calling the recorded comment line at (800) 714-7296, or completing the comment form available on the web site.

To keep the public informed about the study, project information is being published on the project web site, in local media venues, and in newsletters like this. The public may also provide input or questions by contacting any of the Key Contacts in the column to the left.

A public information meeting will be held Tuesday, October 17, 2006 in the Ponderosa Room at the City Hall, 952 E. Spruce Street, Libby. The presentation will begin at 6:30 p.m. with questions and comments to follow until 8 p.m.

In compliance with the Americans with Disabilities Act, this meeting location is accessible to disabled persons. For more information or for those who require accommodations for disabilities please call Annell Fillinger at 406-458-9065.
Frequently Asked Questions:
1. What is the purpose of this Corridor Planning Study?
The purpose of this study is to evaluate the existing conditions and determine if transportation improvements are needed to HWY 567/Pipe Creek Road. The planning process will consider the needs of local residents in Libby, Yaak, along with property owners in the area and the traveling public. Part of the planning process entails an assessment of the environmental surroundings of this road as well as the current condition, use and function, current and projected future traffic volumes, speed, wildlife crossings, and user safety. These findings will help determine any roadway deficiencies and guide the identification of any corridor improvements. The study will evaluate and recommend improvements if any are found to be needed and feasible.

2. What is the study area? (see map)
The study area encompasses the Hwy 567 between Bobtail Cutoff road and Turner Mountain Road, approximately mile post 6.1 to 20.1. This road is a primary access between Libby and Yaak.

3. How are community leaders and agencies involved in the study?
The planning process will be collaborative, involving area elected officials, resource agency representatives, special interest groups, user groups and landowners to ensure local perspectives are represented.

4. Who is the project management team?
The Montana Department of Transportation is the agency lead for this study. Parsons Brinckerhoff (PB), a national consulting firm with several regional offices, will lead a team of consultants to complete the study in the summer of 2007.

5. How will the results of the study be used?
The results of the study will be used to guide MDT and other local entities in planning improvements for HWY 567/Pipe Creek Road. Study recommendations may be integrated into MDT’s and other local affected planning agencies transportation plans and programs based on funding availability. The results of the study will also provide information to support efforts to identify funding for future projects.

MDT and the project team will collect and consider all public comments received to better understand the public view of potential issues. MDT will then determine the next steps that best meets the study purpose and has the support of cooperating organizations, regulatory agencies, stakeholders, and the general public.

6. Who makes the decisions regarding the study?
The project team consists of individuals representing MDT, PB, and other consultants. Community input, traffic, engineering, environmental, economic information will be analyzed by the project team and recommendations will be formulated. MDT will subsequently make the final decision regarding recommended improvements based on available funding.
7. How can the public/community contribute to the study?
The General Public is invited to participate in the process through public information meetings (see schedule below) and ongoing project information review and input. A project web site has been developed to provide on-line opportunities to comment on issues of HWY 567/ Pipe Creek Road. Dates, times, and locations will be announced prior to the events through the local media and the project web site: http://www.mdt.mt.gov.

Meeting slated to discuss corridor planning study – Highway 567 in Lincoln County

The Montana Department of Transportation (MDT) is conducting a public meeting to discuss a Corridor Planning Study regarding 14 miles of Highway 567 also known as Pipe Creek Road north of Libby, beginning at milepost 6.1 (Bobtail Cutoff Road) and extending to milepost 20.10 (Turner Mountain Road). The doors will open at 6 pm with the presentation beginning at 6:30 pm on Tuesday, October 17, 2006, at the Ponderosa Room in City Hall, 952 E. Spruce Street in Libby.

Community participation is a very important part of the process, and the public is encouraged to attend. Opinion and comments may also be submitted in writing at the meeting, by mail to Tom Kahle, Project Manager, MDT Headquarters, PO Box 201001, Helena, MT 59620-1001 or online at www.mdt.mt.gov/mdt/comment_form.shtml. Please indicate comments are for Highway 567 Study in Lincoln County.

The purpose of this study is to evaluate the existing roadway conditions and safety, and determine if improvements are needed for HWY 567 (Pipe Creek Road). The planning process will consider the needs of local residents and property owners in Libby and Yaak, as well as, the traveling public. Part of the planning process entails the following: assessment of the sensitive environmental surroundings of the road, current and future traffic volumes and speed, current roadway condition, wildlife crossings, and user safety. These findings will determine feasible roadway improvements, if any, that may be needed in the future.

MDT attempts to provide accommodations for any known disability that may interfere with a person’s participation in any service, program or activity of our department. If you require reasonable accommodations to participate in this meeting, please call Annell Fillinger at (406) 458-9065 at least two days before the meeting. For the hearing impaired, the TTY number is (406) 444-7696 or 1-800-335-7592, or call Montana Relay at 711. Alternative accessible formats of pertinent information will be provided upon request.

-------------------------------------------------------------------END-------------------------------------------------------------------
MDOT seeks input on Pipe Creek Road proposal

By GWEN ALBERS
Western News Reporter

When Bruce Zwang takes a snow-covered Pipe Creek Road to Turner Mountain, he rarely drives his all-wheel drive mini-van more than 35 mph.

"The road is narrow and in need of reconstruction," Zwang said.

Concerns for the road's condition is why Zwang, president of the non-profit Kootenai Winter Sports that operates Turner Mountain Area, will attend a Tuesday, Oct. 17, meeting to discuss possible improvements. The Montana Department of Transportation will hold a public meeting from 5 to 8 p.m. in the Ponderosa Room at Libby City Hall.

The state hopes to determine if improvements are needed for a 14-mile section of Pipe Creek Road from Bobtail Cutoff Road near Red Dog Saloon to Turner Mountain. MDT two years ago discussed repaving that section.

"We are looking for comments from the public to find out what they perceive to be the problems there," said Tom Kahle, a project manager for MDT in Helena. "There will be a presentation, talk about the planning study and kind of a high-level overview. We're at the feasibility of making improvements to the road."

The road passes through "an environmental sensitive area," added Charity Watt Levis, spokeswoman for MDT. That section of P Road goes through a grizzly bear recovery area. Endangered bull trout are also in the area.

"Before we spend millions on an environmental document, we want to find out if there is a reasonable, economic project that can be done," Watt Levis said. "It's a road between a mountain and a creek, and I think there's federal lands up the road. Whenever you go into an area like this, you need to do an environmental document that can cost millions of dollars."

"We need to see what's a reasonable project for the needs of the community and balance of the environmental concerns," she said.

Zwang noted that in 1996, public input was sought for making improvements to Turner Mountain Ski Area.

"Number one, they wanted to see a new lift; number two, they wanted to see a new lodge, and number three, they wanted to see improvements," he said.

The first two were accomplished and now they're focusing on the road.

"It's a safety issue," Zwang said. "A lot of folks are uncomfortable driving it in the winter because of conditions."

A study would not be completed until next summer, Kahle said. It could take two to three years beyond that for any type of project to begin. Federal money would pay for the majority of it.

10/30/2006
Libby North Corridor Study
Tuesday, October 17, 2006
Ponderosa Room at the City Hall
952 E. Spruce Street, Libby

The purpose of this study is to evaluate the existing conditions and determine if transportation improvements are needed for HWY 567/Pipe Creek Road. The project limits are from Bobtail Cutoff Road to Turner Mountain Ski Resort.

MDT cordially invites the public to this presentation and discussion about the study. MDT attempts to provide accommodations for any known disability that may interfere with a person's participation in any department service, program or activity.

For reasonable accommodations to participate in this meeting, please contact Annell Fillinger at (406) 458-5065 at least two days before the meeting. For the hearing impaired, the TTY number is (406) 444-7696 or (800) 335-7592, or Montana Relay at 711. Alternative accessible formats of pertinent information will be provided upon request.

MEETING NOTES
Libby North Corridor Study

Meeting Name: Agency Coordination Meeting

Date: Thursday, October 19, 2006

Time: 1:00pm-2:30pm

Location: Helena, Montana
MDT Planning Building

Organizer: Jean Riley and Ron Clegg

Attendees: Ron Clegg (PB), Stewart Lamb(PB), Tom Kahle(MDT), Jean Riley (MDT), Lynn Zanto (MDT), Wayne Noem (MDT), Bob Burkhardt (FHWA), Pat Basting (MDT) (Pat called in from Missoula via Teleconference), Jeff Ryan (DEQ), Scott Jackson (USFWS), Glen Phillips (FWP)

Purpose of the Meeting:
The purpose of this meeting was to hold an agency coordination meeting with the resource agencies that have jurisdiction over resources in the Libby North study area. A previous meeting with the U.S. Forest Service (USFS) and Lincoln County was held on Tuesday October 17, 2006. The previous meeting notes are summarized and are available for review. Today’s resource meeting provided an opportunity for the project team to explain the study to the agencies and receive input from them regarding issues and concerns of potentially improving the corridor. Input received during the meeting will be used in the development of the improvement options, and used in the Corridor Study Report. The discussion of the meeting is summarized below.

Discussion Items:

INTRODUCTION
The Libby North study is located along Pipe Creek Road, but outside the area being considered in the Western Federal Lands Study\(^1\). The Libby North study area is not located within the Grizzly Bear Habitat Recovery area but is located within the Grizzly Bear Distribution area. The study area is between the Bobtail Cutoff Road and the Turner Mountain Road (MP 6.1- MP 20.1).

---
\(^1\) The Western Federal Land Study is a planning study performed by the Federal Highway Administration (FHWA) to evaluate improving the forest highway system in northwest Montana. The Thompson River Road and Pipe Creek Road are two projects identified within the Western Federal Lands Study, many other projects throughout the State are proposed. For Pipe Creek, the Western Federal Lands study area started at mile post 17 and then went over the mountain to the Yaak. The Western Federal Lands Study recommended an Environmental Assessment (EA) for their project on Pipe Creek Road.
This is a planning study to help identify corridor issues and define potential improvements to the Pipe Creek Road given the sensitive environmental conditions. The planning study is overseen by FHWA and MDT. The corridor planning process is a result of SAFETEA-LU’s and FHWA’s intention to better link the planning and NEPA process. Bob Burkhardt provided an explanation and background of this process. Bob explained the planning study is not a NEPA document but instead a process that precedes a NEPA document, if one is needed. The planning study can roll into a NEPA document if and when a project is identified. This can result in a significant savings of time and resources. Savings are achieved because issues are known and options are considered before making a determination of a project. The planning study has a public involvement process and an agency coordination process. This helps to determine needs and issues of the corridor at an early stage. The results of this corridor planning process is a report that documents existing conditions, describes issues to address, and provides recommendations for improvements options.

The following individuals were recommended as other possible resources for this study.

- Mike Hensler- Fisheries Biologist FWP (406) 293-4161 ext. 104
- Bryce Maxwell- Amphibian Specialist Natural Heritage Program (406) 444-3655
- Steve Wegner- Forest Service (406) 293-7773
- Allan Steinle- Army Corps of Engineers (406) 441-1375
- Wayne Kasworm- Grizzly Biologist USFWS (406) 293-4161 ext. 105
- Kent Laudon- Wolf Biologist FWP (406) 751-4586
- Anne Vandehey- S.7 Supervisor USFWS (406) 449-5225 ext. 212

**GRIZZLY BEAR**

A primary concern in making improvements to the Pipe Creek corridor is the potential of having impacts to Grizzly Bears. The population of Grizzly Bears is declining in the Cabinet-Yaak ecosystem, which has been mostly caused by human indirect and direct impacts. Only 30-40 bears are estimated to remain in the entire Cabinet-Yaak ecosystem. Within the past year a female grizzly bear was shot in the Pipe Creek drainage, and a male grizzly was removed because of management concerns.

Grizzly Bears are currently listed as threatened but have been determined to warrant endangered status in the Cabinet-Yaak ecosystem. Threatened grizzly bears are protected against “take” anywhere they occur. The legal definition of “take” is codified in Section 3 of the Endangered Species Act (ESA); “to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct.” Most of these terms are commonly understood. However, the terms “harm” and “harass” have been further defined by USFWS regulations at 50 CFR S.17.3, as follows: “Harass means an intentional or negligent act or omission which creates the likelihood of injury to wildlife by annoying it to such an extent as to significantly disrupt normal behavior patterns which include, but are not limited to, breeding, feeding, or sheltering.” “Harm means an act which actually kills or injures wildlife. Such acts may include significant habitat modification or degradation when it actually kills or injures wildlife by significantly impairing essential behavioral patterns including breeding, feeding, or sheltering.”

A situation or proposal that may lead to a “take” is not always easy to define. Projects that increase traffic speed or traffic volumes on rural forest roads and that are located in grizzly bear territory are likely to cause concerns about possible adverse effects and “take” relative to grizzlies. Consultation with the US Fish and Wildlife Service (USFWS) will be necessary if it is determined that the proposed project will affect grizzly
bears or other federally-listed species. If the proposed project is likely to result in adverse effects to listed species, USFWS will issue a biological opinion in which it is determined: 1) whether or not those adverse effects would be likely to jeopardize the continued existence of that species; 2) whether or not any critical habitat would be destroyed or adversely modified; 3) whether “take” of any listed species is anticipated from the project; and 4) what measures must be taken to minimize that amount of “take.”

A court case relevant to the Pipe Creek study is the Revett Silver Company’s Rock Creek Mine lawsuit. The 2003 Rock Creek Mine lawsuit involves land that is located in the Cabinet-Yaak ecosystem. The lawsuit focuses on impacts to bears and other protected fish and wildlife. The Court ruled that the grizzly population in the Cabinet-Yaak ecosystem is in peril and the USFWS was arbitrary or capricious in determining that the mine would not jeopardize grizzly bears or bull trout. The litigants argued that the indirect impacts associated with the mine and human activity will deleteriously impact the bear population, a bear population that can not sustain additional loss. The Court agreed and halted the project. In the meantime, the Rock Creek Mine has submitted an approximately $30 million mitigation package that includes enforcement, education, dedication of bear habitat conservation property, and other items. This could change the outcome of the lawsuit and it could be a potential example for future mitigation possibilities. MDT could possibly participate in the Rock Creek mitigation plan with either a cash or land dedication once the details are worked out.

With regards to the Grizzly Bear situation in Pipe Creek, research has shown that the upper areas of the Pipe Creek drainage are included within the home ranges for several Grizzly Bears and the lower areas in the drainage are not frequently visited by bears. The higher areas for home range are roughly from M.P. 17 and over to the Yaak. The lower areas are M.P. 17 and below to M.P. 6.1.

Improvement projects proposed on Pipe Creek Road that are identified for the areas higher in the drainage could have more impact on bears and result in greater likelihood for a “take” than improvement projects proposed in the lower areas of the Pipe Creek drainage. A full reconstruct and widening of Pipe Creek Road could result in a “take” of grizzly bears. On the other hand, a project simply proposing roadway striping on Pipe Creek Road is not likely to be a problem. Spot improvements, depending on the extent and location in the drainage, may possibly be feasible without adverse effects to grizzlies. To receive the best input and direction from USFWS, the improvement options were recommended to be grouped together. The group of improvements will be evaluated with respect to the indirect and direct impacts to bears.

The USFWS will evaluate all the options and determine if grizzly bear “take” is likely to occur due to the project. Relevant factors could include, but are not limited to, traffic volumes, vehicle speed, and widening in areas that are sensitive to bears. The process is not black and white but rather it involves significant discretionary and professional judgment.

**CONSERVATION BANKING AND WILDLIFE CREDITING**

A discussion was also held about conservation banking and wildlife crediting. The question was raised about conservation banking for Grizzly Bears. One obstacle to conservation banking for bears is the Court’s decree that justifying more “take” in the Cabinet-Yaak ecosystem would be very difficult. Additional “take” could jeopardize the viability of the bear population. The other obstacle is the difficult process necessary to set up the bank. It is difficult to assign a dollar amount to a bear and significant coordination with other resource agencies would be required. In support of mitigation banking is the current Rock Creek Mine mitigation proposal. This may help better define future mitigation strategies. Examples of mitigation projects in other
states, such as the Prairie Dogs in Utah, were discussed to provide background to possible scenarios that could be used.

**BULL TROUT**

Critical habitat for the bull trout was designated for Pipe Creek over the last year. This means that Pipe Creek and live tributaries are protected against impacts that negatively impact the spawning or mortality of bull trout (See USFS comment from October 17 meeting). Critical habitat regulations also apply to private property. Although there is no critical habitat designated on USFS lands; effects caused by actions on those lands must be considered in regard to critical habitat. The East Fork of Pipe Creek was indicated as the most important tributary of the five or six other tributaries. It was also recommended that the number of stream crossings need to be identified as part of this study. One bridge and two bottomless culverts are thought to be located along the corridor.

**LYNX**

The Pipe Creek drainage is known habitat for threatened Canada lynx. Lynx are rarely seen but are known to be in the area. Impacts to lynx would need to be evaluated for any improvement proposal. A recommendation was made to check with the USFS for lynx population and habitat data in the Pipe Creek area.

**WOLF**

The Cabinet-Yaak mountains and Pipe Creek area are known habitat for endangered gray wolves. The wolf population is on the increase and the population is thriving. Impacts to wolves need to be studied as part of any improvement project. Contact should be made with the MFWP wolf biologist for additional information regarding habitat and impacts.

**WATER QUALITY**

Pipe Creek is not a 303 D listed stream and is therefore in good water quality condition. The biggest concern about water quality in Pipe Creek is the use of Magnesium Chloride applications for snow melting on Pipe Creek Road. Magnesium Chloride should not be used. Snow that is removed from the roadway should not be pushed or blown into the creek. The Department of Environmental Quality (DEQ) recommends the use of MDT’s Draft Winter Maintenance Guidelines for the roadway. An MDT contact for information on the guidelines is Dan Williams. DEQ recommends the following:

- Bridges should not allow sanding material drop through the deck and go directly into the creek.
- Use curb and gutter on the bridges to channel runoff away from the bridge and creek.
- The removal of an excessive number of trees adjacent to the stream could potentially increase the water temperature in Pipe Creek.
- Move Pipe Creek Road away from the creek to avoid roadway runoff and sediments entering the creek.
- Use design features on the roadway that will capture runoff and sediment and prevent it from directly entering the creek.
- Minimize riparian loss and stabilize side slopes.
- Avoid disturbing existing stream bank stabilizations.
OTHER COMMENTS
Pat Basting indicated that he will send a report titled “Interagency Grizzly Bear Committee Report.” This report will provide additional background into the concerns with grizzly bears. Also it was recommended that one of the improvement options that should be studied is an option to make the road less desirable to drive. This might include slower design speeds, etc.

We discussed the possibility of having another meeting in January to discuss the preliminary findings of this study. Those in attendance seemed to support this idea. PB will follow up with MDT on this.

Agenda (on file in project files)
Handouts
Sign-in Sheet (on file in project files)
Existing Conditions and Potential Improvements
October 19, 2006

Issues
Safety
• Slide offs in the winter
• Drop offs
Emergency vehicle access to/from Yaak
Growth
Trees up against the road – visual and sunlight for drying road
Recreational use – skiers, snowmobiles, bicyclists

Roadway Deficiencies
Substandard horizontal curves
Roadway is narrow
No paint striping to delineate travel lanes
Snow storage reduces the travel way in the winter to one lane at times
Rock falls
Substandard clear zones (Pipe Creek on west side of road)
Deteriorating guard rail
Poor pavement condition
Poor sight distance

Environmental Issues
Cabinet-Yaak Grizzly Bear distribution area
Cabinet-Yaak Grizzly Bear habitat recovery zone
Bull trout conservation area (spawning in Pipe Creek and tributaries)
Lynx
Wolf
Plants
Others?

Potential Improvements
Paint striping
Signing
Tree removal
Guardrail installation
Pavement overlay
Snow removal technologies
Snow storage areas
Rock walls
Spot safety improvements
Roadway widening in areas
Full roadway reconstruction
Frequently Asked Questions:

1. What is the purpose of this Corridor Planning Study?
The purpose of this study is to evaluate the existing conditions and determine if transportation improvements are needed to HWY 567/Pipe Creek Road. The planning process will consider the needs of local residents in Libby, Yaak, along with property owners in the area and the traveling public. Part of the planning process entails an assessment of the environmental surroundings of this road as well as the current condition, use and function, current and projected future traffic volumes, speed, wildlife crossings, and user safety. These findings will help determine any roadway deficiencies and guide the identification of any corridor improvements. The study will evaluate and recommend improvements if any are found to be needed and feasible.

2. What is the study area? (see map)
The study area encompasses the Hwy 567 between Bobtail Cutoff road and Turner Mountain Road, approximately mile post 6.1 to 20.1. This road is a primary access between Libby and Yaak.

3. How are community leaders and agencies involved in the study?
The planning process will be collaborative, involving area elected officials, resource agency representatives, special interest groups, user groups and landowners to ensure local perspectives are represented.

4. Who is the project management team?
The Montana Department of Transportation is the agency lead for this study. Parsons Brinckerhoff (PB), a national consulting firm with several regional offices, will lead a team of consultants to complete the study in the summer of 2007.

5. How will the results of the study be used?
The results of the study will be used to guide MDT and other local entities in planning improvements for HWY 567/Pipe Creek Road. Study recommendations may be integrated into MDT’s and other local affected planning agencies transportation plans and programs based on funding availability. The results of the study will also provide information to support efforts to identify funding for future projects.

MDT and the project team will collect and consider all public comments received to better understand the public view of potential issues. MDT will then determine the next steps that best meet the study purpose and has the support of cooperating organizations, regulatory agencies, stakeholders, and the general public.

6. Who makes the decisions regarding the study?
The project team consists of individuals representing MDT, PB, and other consultants. Community input, traffic, engineering, environmental, economic information will be analyzed by the project team and recommendations will be formulated. MDT will subsequently make the final decision regarding recommended improvements based on available funding.
7. **How can the public/community contribute to the study?**

The General Public is invited to participate in the process through public information meetings (see schedule below) and ongoing project information review and input. A project web site has been developed to provide on-line opportunities to comment on issues of HWY 567/Pipe Creek Road. Dates, times, and locations will be announced prior to the events through the local media and the project web site:

Corridor Planning Study Information

- MDT's study will examine roadway deficiencies, design issues, financial feasibility, environmental issues, and capacity needs.
- Planning will prioritize the protection of environmental resources. Environmental resources unique to the project area include the following:
  - Grizzly Bear habitat conservation area.
  - Bull trout conservation area.
  - Lynx, wolf, native plants preservation area.

Schedule:
Step 1: Identify Issues; June-Aug. 2006
Step 2: Collect existing data and conduct a field review; Aug.-Oct. 2006
Public Information Meeting Oct. 17
Step 3: Draft existing conditions report; Oct.-Nov 2006
Step 4: Identify potential improvement options; Nov-Jan 2007
Step 5: Draft Corridor Study Report (CSR); Feb. 2007
Public Information Meeting –to review CSR; Mar. 2007
Step 6: Final CSR; Apr 2007.

We want to hear from you any:
- Issues, concerns and questions... you may have about this roadway

What is the purpose of this Corridor Planning Study?
The purpose of this study is to evaluate the existing conditions and determine if transportation improvements are needed to HWY 567 also known as Pipe Creek Road. The planning process will consider the needs of local residents in Libby, Yaak, along with property owners in the area and the traveling public. Part of the planning process entails an assessment of the sensitive environmental surroundings of this road as well as user safety, current condition, use and function, wildlife crossings, current and future traffic volumes, and speed. These findings will help determine any roadway deficiencies and guide the identification of any corridor improvements. This study will evaluate and recommend improvements if any are found to be needed.

What is the study area? (see map on the second page)
The study area encompasses the Hwy 567 between Bobtail Cutoff road and Turner Mountain Road, approximately mile post 6.1 to 20.1. This road is a primary access between Libby and Yaak.

How can the public/community contribute to the study?
The General Public is invited to participate in the process through public information meetings (see schedule to the left and below) and ongoing project information review and input. A project web site has been developed to provide on-line opportunities to comment on issues of HWY 567. Dates, times, and locations will be announced prior to the events through the local media and the project web site: http://www.mtd.mt.gov.

Those with a specific interest in the project are encouraged to join the project mailing list. They can do so by submitting their name and contact information to Tom Kahle at the address or email shown, calling the recorded comment line at (800) 714-7296, or completing the comment form available on the web site.

To keep the public informed about the study, project information is being published on the project web site, in local media venues, and in newsletters like this. The public may also provide input or questions by contacting any of the Key Contacts in the column to the left.

A public information meeting will be held Tuesday, October 17, 2006 in the Ponderosa Room at the City Hall, 952 E. Spruce Street, Libby. The presentation will begin at 6:30 p.m. with questions and comments to follow until 8 p.m.

In compliance with the Americans with Disabilities Act, this meeting location is accessible to disabled persons. For more information or for those who require accommodations for disabilities please call Annell Fillinger at 406-458-9065.

MEETING NOTES
Libby North Corridor Study

Meeting Name: Alternative Workshop

Date: Tuesday, May 8, 2007

Time: 8:00pm-2:30pm (included field trip of the corridor)

Location: Libby, Montana
Forest Service Supervisor’s Office, 1101 US Hwy 2 West, Large Conference Room

Organizer: Jean Riley and Ron Clegg

Attendees: Jean Riley (MDT), Shane Stack (MDT), Bob Burkhardt (FHWA), Rita Windom (Lincoln County), Marc McCully (Lincoln County), Malcolm R. Edwards (FS-Libby), Tom Kahle(MDT), Paul Stantus (FS-Libby), Lani Kai Eggertsen-Goff (PB), Tom Grabinski (FS-Libby), Ron Clegg (PB), Dennis Naillon (PB), Wayne Noem (MDT), Scott Jackson (USFWS), and Lynn Zanto (MDT)

Purpose of the Meeting:
The purpose of this meeting was to hold an alternatives workshop with staff from MDT, representatives from Lincoln County, the resource agencies that have jurisdiction over resources in the Libby North study area, and the consultant, PB. Today’s meeting provided an opportunity for the project team to explain the status of the study to the participants and receive input from them regarding issues and concerns about the Alternatives Development Memorandum. This memo will be used as a basis for a Draft Corridor Study Report document. Input received during the meeting will be used in the development of the improvement options, and used in the Corridor Study Report prior to distribution to the public and to agencies for formal comments. The discussion of the meeting is summarized below.

Discussion Items:

INTRODUCTION
The Libby North study is located along Pipe Creek Road, but outside the area being considered in the Western Federal Lands Study. The study area is between the Bobtail Cutoff Road and the Turner Mountain Road (MP 6.1- MP 20.1). The meeting was intended to identify alternatives and impacts (including safety), and monetary/funding constraints. A draft Corridor Study (the Study) will incorporate the work done to date, today’s meeting discussions and research completed in an environmental scan, which will result in a document to be presented to the public and to solicit comments from Resource Agencies.
Ron pointed out the main items discussed in the Alternatives Development Memo, safety problems, poor pavement condition, snow storage and removal. Accidents were identified up and down the corridor, but a cluster between 6.1 and 8 is puzzling. Discussion of what accident reports listed as “driving to fast” and “inattentive” as well as whether the higher accident rates are due to transition (off of Hwy 37).

Ron asked Scott Jackson to give a brief summary of how the grizzly bear recovery zone and other factors related to grizzly bear and the modification of the existing roadway could be addressed in the Libby North Corridor Study (LNCS). Often, when a road project is proposed through mountainous corridor areas, the area becomes more attractive for recreation and home or cabin sites. Over time when you put more people and bears into contact not all the conflicts between bears and people can be quantified or blamed entirely on any one road project.

This road currently has low traffic, is already paved and has an ADT of 150-200. Even at very low volumes you can get direct bear mortality (a bear hit by a vehicle). He suggested a section in the Study on management strategies, maybe a “Best Practices” type section describing scenarios if you live in the forest (bear habitat), e.g. public education regarding keeping garbage from bears. This would be informational only, and would not suggest widening of the road can occur if residents just do “the right thing” in regards to wildlife.

There was discussion about once the road is improved, if it is, more development will likely occur. Lincoln County has limited land in private ownership compared to the amount in public ownership. Lincoln County is working on a Growth Plan, this is in process. Currently there are no development restrictions and no zoning in place. It would be good to have a rough inventory of Private Land (including Plum Creek owned lands).

The question arose about what entity will right-of-way (ROW) ownership end up with, MDT, Lincoln County or Forest Service, if the highway becomes a “state secondary” road. Lincoln county currently has permitting authority for access to Hwy 567. There would be a systems impact process, to evaluate the development of a project of a certain size, what conditions are needed to keep the mobility at an acceptable level.

Current schedule of maintenance on the corridor is that winter maintenance is done by the County and summer maintenance by the Forest Service. If it becomes a “state secondary” and also a “forest highway” it is not fully understood what will occur with the maintenance of the roadway. It will be up to MDT to secure funding for maintenance budget (legislatively). County could keep winter maintenance, but MDT would likely fund the maintenance. According to Tom Grabinski the Forest Service maintains roads for resource management not for transportation or the comfort of drivers.

A question was raised about the project to the north of the Libby Corridor Study area, from the ski area, Turner Mountain, up to the community of Yaak. Western Federal Lands is waiting to see what the result of this Study will be.

Review of the problems identified in the Tech Memo

Ron began to review the 11X17 sheets of the Roadway Inventory. Sheet RD-5 Shane asked about bridge information (structurally obsolete, sufficiency ratings) and Tom has sent bridge inspection results to MDT, basically OK. The south bound approach should have guard rail installed.
On sheet RD-07 at RP 8 Marc said the side slope is too steep. Paul stated that large boulders above the roadway have had to be intentionally “removed” to avoid these falling into the roadway.

Curve at RP11 is similar to RP 8, per Marc, the road was totally blocked off once this year. One rock was a dump truck load by itself, the most unstable time of year is after winter, during thaw “break up” time.

Existing guardrail safety project from RP 10.8 to 11.2 will include curve signs, speed plates and chevrons. This is tied to a couple of locations, per Tom and Shane.

Ron asked who owns the right-of-way (ROW). Tom stated the FS acquired ROW easements on the existing road through the private lands. When the FS grants easements across National Forest System lands the Grantee only gets an easement from the FS, not fee ownership, of the road right of way, which includes the State, County and private entities. Some portions of the existing road have easements through the private land. Those easements may have stipulations that allow for a minor shifting of the ROW as needed.

Scott Jackson answered an inquiry about compensatory mitigation, or off setting impacts that may occur to species if MDT does “non-required” or above and beyond regulated requirements, such as a less restrictive culvert at a stream crossing. Scott said that USFWS has not really done anything like that in Montana to date. Proposed mitigating measure within a “proposed project” instead of coming to Section 7 consultation and having FS or FWS assigning mitigation ‘after the fact’ could occur. If you can build in some good minimizations to come up with lesser sum of total impacts that could lead to offset of impacts.

Continuing on the review of inventory sheets, RD-30 local hunters have cut a trail head where folks typically park on the East side of the road and the ‘hunter trail’ meets up with a FS trail. Paul stated that some sort of pull out should be identified.

RD-36, Marc stated that this winter wasn’t a bad winter and it still got plugged up in that area. Snow removal goes to hillside, once it gets too full then they have to push snow across the road and it can be an issue of safety for the snow plow operator or cars traveling the roadway. Also, they can only plow “normally” about 2/3 of the winter. About 2/3 of the way through winter, the roadway becomes more like a driveway and not a road by county standards because it becomes so narrow or constrained by snow. Rita said Lincoln County would gladly accept a gift of a rotary snow plough. Last time they looked into it, the cost for a really used model was still $60,000 and about $250,000 for a new one. Scott said that when it comes to comparing human safety versus a little dirty snow (no chemicals) FWS is not going to object.

RD50-51 ROW doesn’t currently have road centered in the ROW. Tom said that there is a need to look at wording in easements, the centerline of road can equal the center of ROW if both parties agree to that in the deed.

RD 52-57 Design speed is 45 mph. No posted speed limits currently. Paul said that a structural plate arch (one pipe past road junction is to standard. This is where the East Fork comes into Pipe Creek and the main Pipe Creek crossing. It is designed to a FS 100 year storm event.
Approximately at the match line there is a new snowmobile trail put in here. (150 yards) Potential crossing problem is acceptable by FS road regulations, but state law requires a 90 degree crossing. The corridor can be approved as “side of corridor” of Hwy 567 if the roadway can be used by snowmobiles.

The last two to three sheets show the tight curve radiuses. Sheets 61-62 (some missing from photocopies that participants had). Marc stated concrete barriers or guard rails make it tough for snowplow trucks or graters to clear snow.

Tom said that informal consultation has occurred so far in the tribal realm. The folks in the Kootenai, Cabinet-Yaak, Libby areas are aware of this study. FS has advised the tribe that there is a potential project, but until there is an actual NEPA process no formal consultation will occur. FS can act as lead agency on this consultation if a project happens. Becky Timmons is the Heritage Program leader in Libby, and for the Kootenai Salish tribe Loretta Stevens is the contact.

There was discussion that work on this corridor would be potentially phased and multi-faceted type project.

Archeological consideration for Old Pipe Creek road that winds in and out of the existing roadway for Hwy 567 may have a “historic trail” designation according to Tom.

Per Wayne it is not possible to do the whole thing (from approximately RP 6 to RP 20) all at once. There is only about $5 – 5.5 million available for construction costs. Money would have to be put into the next transportation bill. He stated “the longer we wait, the less we can get done” on this roadway. Shane proposed the scenario of looking at the whole corridor, realizing they can’t do the whole stretch. The County can choose to have a second portion become second priority on the MDR Secondary Road Program.

Western Federal Lands (WFL) has already designated the north end of the corridor as secondary but if this designation is for the portion north to RP 20 it may be possible to do something with those funds to say from RP 15 (potential stopping point of spot improvements) may be able to move the funds.

From the county’s perspective, the main concern is that this stretch be a safe highway. This includes for people coming into Libby using ambulance service, commuters between the community of Yaak and Libby, and the recreational users. Recreational use potential with Turner Mountain is high on the list as part of the economic diversity.

According to Wayne one year’s worth of funding allocation could be used for PE, IC and ROW.

Public told MDT what they wanted, during the public meeting in October. Rita was surprised that they didn’t want more (i.e. full reconstruct).

Shane thinks the options need to go to a mixture and look carefully at accident cluster areas. Also, look at driver expectancy and make a consistent width as much as possible.

Scott wanted to verify that the cost is broken out by each of the Options. He asked if PB looked at “spot improvements only” costs. Dennis said that he had estimated fill slopes, mainly looked at doing widening while
you are in there and didn’t look at costs of “spot fixes.” Ron and Dennis agreed to revise the cost estimate information in the Draft Corridor Study document.

Scott clarified that the reason he wanted MDT to look carefully at spot improvements is that from a species impact standpoint, spot improvements would be more attractive.

Lynn talked about Highway Safety funding. At RP 11 there is consensus to fix that spot (reconstruct) and then look at improvements PTW to certain MP that makes sense. This would allow rehabilitations to the pavement in certain areas, how far up from the south end of the corridor can you get until you run out of funding? This could be assessed with the options cost estimate information being broken out a little more. Lynn suggested that during the field review time, participants could identify some possible logical termini.

Dennis said he’d calculated a quick “ball park” estimate and it was approximately $1.8 million/ mile. Full reconstruct could only happen for 2-3 miles with current funding at this cost per mile estimate.

Wayne suggested that MDT look at doing a rehabilitation on as much of the roadway as possible and do “full reconstruct” as little as possible, i.e. not likely to be able to bring the entire roadway up to full AASHTO standard.

Discussion continued about the 4:1 v-ditch with design exceptions to allow for better snow removal, and for rehabilitation areas, stay on the same alignment grade as much as possible. Marc said that no lane delineation currently, if striped, that has got to help things out.

An example of design speed versus posted speed limit to aid in lowering travel speeds is the Remini watershed for the City of Helena. This road has a posted speed limit of 55 since they don’t want it to be seen as a super highway. They have 6 inch striping, spaced differently to make it feel “narrower” along the roadway, this is an optical illusion that works to encourage drivers to slow down.

ROW costs shown would not be $25K if coming from FS ownership to MDT ownership, Tom suggested that cost cut could save some on the estimate.

2012 is the earliest that any construction could occur, per Wayne this would depend on a lot of variables. Spot improvements can happen, but has to be related to some type of construction project for funding purposes.

Marc and Rita both suggested that MDT fix all the bad spots, and pointed out that striping could be good during summer, but will likely be covered five months of the year (with snow).

Paul liked the idea of reconstructing down to twenty two feet width so drivers will expect certain width and will want to keep to consistent speeds. He also described some land ownership changes near Yaak, Champion had sold some lands and now people reside there year around. He also sees that there is still a lot of development continuing to go on and people use Hwy 567 as the shortest route to town, and the roadway has become something it wasn’t intended for (it started out as a haul road for timber). He’s more concerned about staying at 22 feet wide (or less) and stay out of the hillside. He also thought we should keep to AASHTO low volume (low speed) road standards with virtually no guardrails.
Bob said that he thinks with spot improvements MDT can keep inconsistency to only limited areas (20 feet versus 22 foot width).

Ron asked the question of Scott, “could MDT get sued if Hwy 567 is reconstructed if a bear were to get killed by a vehicle on the “new” roadway? Scott replied that there are all types of potential for suits, but what that suit would actually come to (whether it would be productive) is questionable. He pointed out railroads result on many more collisions with bears than highways.

Malcolm asked where would a law suit come from after construction, and the answer was that the action would more likely occur during a planning or environmental process. Scott pointed out that if we didn’t take bears into account, i.e. designed for too high a speed or guardrails weren’t place in appropriate spots, then more likely that a suit would be filed.

Shane asked if a speed study had been done. Paul said that FS law enforcement could issue tickets when vehicles travel at 45 mph or more up to the base of the Turner Ski Resort Hill. But no formal study has been done.

Transportation Commission approval would be required for a 45 mph speed limit to be posted, since the roadway would be a secondary highway. Tom stated he doesn’t think that the State can require a 70 mph speed limit through the FS owned area since it is not in the State’s jurisdiction.

Wayne said that an advisory speed plate of 35 mph with a design speed of 45 mph could be a good compromise.

Scott answered a question about what is considered a “take” for Grizzly Bears on highway projects. It’s not whether the bear is going to cross another 2-4 feet of pavement, but it more the driver speeds and more ADT. FWS does not want the grizzly bear to be a factor in compromising human safety issues. The narrower we can get the improvements to Hwy 567, the better for the bears, but want to make sure safety issues and snow plow/storage are addressed.

How much should MDT do in Corridor Study process versus in the NEPA process? Per Jean Riley the Purpose and Need, alternatives proposed can come from the Corridor Study and then use those to move to more detailed environmental analysis in NEPA.

Loon Lake/East Fork roads existing width noticeably and consistently a problem. Marc said that approximately 22 feet is ok for snow removal, from mile 19 (this is the 35 mph section) and you can’t do much about it because of the slopes to the sides of the roadway. Scott asked if MDT can do a narrowing in only some sections and other sections can be same width as that at MP 6-7 area. Wayne said he thinks you need to start with 24 foot width for future overlays to be practical. Shane said that it is uncertain when/why MDT will need to be that wide, hopes it won’t ever be necessary as a 5000 ADT road.

Scott asked if there is going to be an adjustment on thinking about ways to segment the road, how do you choose various widths?

Marc suggested that the last mile is the most dangerous, there are five to six tracks in the snow (off the roadway) in one day. People have to slow down because it is narrow and winding. Ron responded that
guardrail installation in these sections would mean there would have to be a little bit more width to accommodate the guardrail.

Rita wants to see a 22 foot top, and maintain the aesthetic value of the road, while fixing the really bad spots. The consistency of the roadway is important. She thinks it is not the folks that use the road every day that get into trouble, it is the occasional or new user and more and more bicycle use is occurring to add to the mix.

Scott asked if you had to choose between “spot improvements” or consistent road width, what would be the preference? Dennis replied that start out at the bottom and top of the corridor and work your way to the middle could be a good approach.

Bob said he didn’t think lack of funding could be used as the reason not to do something for the bad spots.

Wayne reminded the group that Counties, Public, MDT and FS need to advance their priorities for transportation projects and then MDT can come up with an Implementation Plan.

Rita suggested that we identify the sections of the road where “you meet someone during the winter and have to back up due to narrow roadway width” and fix those areas.

Malcolm said he wanted to make sure that the problem with shade on the roadway is not forgotten. On straight aways the ice lingers a lot longer.

Ron asked the group to identify the main priorities, with the following responses coming from the participants:

- Snow removal; make ditches where snow can go, maybe 10 to 12 feet long. Maybe safety funding could be used toward purchase of snow removal equipment. The problems with snow removal currently are mostly due to slope. Marc and Paul suggested a concentration on areas that have banks, width isn’t really a concern for plowing.
- Identify key areas where need ditch vs. width
- 24 foot width side friction, striping will keep drivers in summer time in the lanes, snow will do that in the winter
- Wayne would like to see 26 foot widths through as much of the corridor as possible, or at least 24 foot rehabilitation and spot construction.
- Scott prefers Option 2, plus spot improvements if possible.
- Option 3 is not where we want to go, inconsistency is not desirable. Ideally 24 feet, may not be achievable for construction, cost, environment.
- Look at guardrail standards
- For the State to take over maintenance costs (versus Lincoln County) MDT would have to go to the legislature for funding, but could have the County continue the maintenance, funded by MDT budget.
- Look again at benefits/costs for using safety funding, some of the money is booked out for 20 years, per Shane.

Field trip notes:
Don’t need to rework the corner at RP 6.

Don’t want to touch the bridge if not necessary. Crossing at RP 8, no evidence of erosion. Don’t have any intention of going into Pipe Creek, so may have to creep up the hill a bit.

RP 9.0 about a quarter mile of pot holes, not bad.

RP10 Blue Creek Road, used mainly by logging trucks. No defined ROW on FS lands. Crumbling rock could be a “borrow site” for spot improvements. Could scale it back and maybe have more snow storage since the snow wouldn’t have to be pushed across the roadway, and maybe could flatten out the curve. The stream is currently being constricted and this results in increased velocity through the pipe, allows for fish passage, yes, but not ideal.

RP13 Spot where hunters park for convenience.

43 small patches of repaired surface before and after RP 14, done by the FS recently.

Snow storage just before RP 15, if at least 22 feet here could accommodate some pull out areas during winter. Could possibly fill in some stretches (if widening occurs) that would allow for snow storage, large coarse rocks on the edges of roadway could serve as a sort of French drain.

RP17 the east side of the “ditch” is used for snow machines. Major intersection that hooks to Hwy 584 here. Road is open June until when the “snow flies” when FS staff go up and close it to motorized travel, usually around December 1. This helps protect Grizzly Bear habitat.

A large road bike event occurs here, “Stoker Scenic Tour of the Kootenai River” as a benefit for charity. The event is a 105 mile ride that starts and ends in Libby.

RP 18 Pavement is deteriorating (pavement crumbles). Two large structures have been recently added by the FS, one for fish passage. Just before RP19 is a snowmachine trail.

800 to 900 foot elevation gain over the 20 mile study corridor roadway.

Between Loon Lake road and Trail #226 (bridge) only would require a cut in of about 3 feet and this would allow for snow storage and stable road bed area. From RP 7-12 is fairly straight forward to look at spot improvements, minimize the impact to ditches, existing roadway is acceptable for the most part. From RP 12-17 this stretch encompasses the bridge, little cut and fill areas, then from 17/18 to end is the hardest part, that could take all the funding by itself. Adding guardrail almost all the way between 18 and 20 would increase safety a lot.

OTHER COMMENTS

The group discussed the possibility of having a public meeting in July or August to present the Draft Corridor Study. PB will follow up with MDT on this for specific dates, location and times.
The group went on a site visit in 3 separate vehicles from MP 6 to MP 20. The site visit was from about 11:45 a.m. to 2:15 p.m.

Alternatives Workshop
Tuesday, May 8th 2007
AGENDA

Tuesday May 8th:  8:00a.m. to 1:30 p.m.
Kootenai National Forest Office, Forest Supervisors Office, Large Conference Room
1101 US Hwy 2 West
*Lunch will be provided*

8:00   Welcome and introductions (Lynn Zanto)
8:20   Status report of the study (Ron Clegg)
8:40   Discussion of Existing Conditions
   - Substandard geometry
   - Accidents
   - Clear zone
   - Environmental concerns
9:00   Discussion of Alternatives Development Memo
   - Review the options presented
   - Are there other combinations?
   - Short term and long term improvements
   - Funding
   - Identify a preferred option to implement
11:00  Next Steps
   - Finish Corridor Plan
   - Public Information Meeting
   - Implementation – discuss plans for implementation
11:30  Lunch
12:00  Field Review
1:30  Adjourn
The following letter and comments document that the letter Lynn Zanto sent requested comments from various agencies on the draft Libby North Corridor Study. The letter was dated August 30, 2007, four agencies responded. The comments were addressed within the Final Libby North Corridor Study document as appropriate.
Jean, I took a quick look at the document:

Overall, it looks pretty thorough — I was pleased to see the acknowledgement of winter snow maintenance issues in the Water Quality discussion in section 4.6 of the document that DEQ had expressed in our October 06 meeting. Obviously, these are tough issues to deal with in any design decisions, but it appears that implementing some of them could also improve safety issues by improving snow handling conditions in the corridor.

This corridor analysis concept appears to be a good way to get out front of complicated environmental and design considerations — thanks for the opportunity to participate.

FHWA Comments to 8-24-07 Draft Libby North Corridor Study

Page 1 – Define all acronyms. i.e. PB

Page 2 – under B. who is included under stakeholders under C. (horizontal and vertical?) curves (What about clear zones) and/or shoulder WIDTH under D. meetings held, referenced? Under E. Provide a summary of the two key issues for encroachment of the existing roadway and slope stabilization.

Page 3 – Dense vegetation…… Summarize areas of roadway and history where this has been a problem.

Page 4 – Management Strategies….. Two ‘whichs’ in first line. The list (remove below) describes the ……Grizzly Bears – Are bears getting hit on the road?

Page 8 – Figure 2 15 to 26 feet width is a wide range. Assume predominately 20’.

Page 16 – Hydraulic Structures Is Timberlane Bridge structurally deficient or functionally obsolete. Has not been analyzed for scour so cannot comment on structure hydraulics.

Page 25 – Water Quality DEQ recommends against use of Mag Chloride. Is this official DEQ policy?
Listed below are the comments the Forest Service has on this Study by individual providing the comments. If you have questions on these comments please contact me by phone or email.

The pages in the Table of contents do not match the wildlife section and thus probably not others (Table says wildlife starts on page 28 when it actually starts on page 26.

Page 27: 1st paragraph - bald eagle is no longer listed under ESA, but it is now a sensitive species
Page 27: 2nd paragraph - grizzly bear population estimate is NOT 30-50, it is 30-40.
Page 27: 2nd paragraph - the last sentence, the mortality and removal occurred in 2005, NOT 2006
Page 28: 4.10.1.1 - grizzly bear population estimate is NOT 30-50, it is 30-40.
Page 28: 4.10.4 Wolf - 2nd sentence remove the word "wolf" before "biologist".
Page 31: Table 12 - Northern goshawk is no longer on the Sensitive species list so should be remove from table. Bald eagle is now on the sensitive species list so if corridor analysis area includes bald eagle habitat it should be added to the table.

Wayne J. Johnson
Forest Wildlife Biologist

Page 1 - Draft document: Study Goals and Objectives --> Goals and objectives are not synonymous. Goals and their associated objectives should be listed separately.

There is mention of noxious weed management via Executive Order 13112 (Feb 3, 1999), weed management and prevention should be listed as an objective of the project.

I am not aware of any issues regarding ROW approaches or ROW encroachments in the project area.

Mark Petersen
Libby District

Page 24 first paragraph----The Turner Ski area is planned by the US Forest Service. This should state that it is located on FS lands, and operated by KWS.

Mike Guthneck
Contracting Officer/Program Manager
Libby Ranger District

Thank you for allowing the Forest to review this document.

Tom Grabinski
Lands Officer/State Highway Project Coordinator
Kootenai National Forest

September 25, 2007
Hi Jean and Lynn,

Just a note to let you know I have looked through the August 2007 draft Libby North Corridor Planning Study that you sent me last month. I think the study does a good job of identifying and discussing concerns and opportunities in this corridor. Evaluating these topics at an early stage of planning seems to be an efficient and intelligent way to approach potential project development in sensitive areas like this. I applaud MDT's planning efforts and encourage you to continue involving stakeholders at the earliest stages feasible.

The Libby North Study identifies Improvement Option 6 as the option recommended for implementation. The USFWS appreciates the efforts that went into developing the elements of this option that strive to address a number of concerns along the corridor, while minimizing effects to adjacent wildlife habitats. We recommend implementation of the design options within Option 6 that propose reducing the roadway's paved top width from 24 feet to 22 feet between RP 17 and RP 19, and down to a 20-foot paved top width between RP 19 and RP 20.1. These design options were discussed as a means of reducing impacts to the natural environment.

The upper drainage serves as important habitat for a host of species, including threatened grizzly bears, and the USFWS believes that this area of the corridor warrants additional efforts to minimize effects to sensitive species. Because of the recognition that habitat values and use by grizzly bears increase as you proceed farther up the Pipe Creek drainage, we recommend that the proposed project design reflect the increased sensitivity and value of the upper drainage by reducing the project's direct and indirect effects in that portion of the corridor.

Thank you for the chance to comment on this draft study. Please contact me if I can be of further assistance. Have a great weekend!

Scott

Scott Jackson, Fish and Wildlife Biologist U.S. Fish and Wildlife Service Montana Field Office
Libby North Corridor Study

Public Information Meeting Technical Memorandum

October 24th, 2007

SUBJECT: Public Information Meeting Technical Memorandum

TO: Montana Department of Transportation

FROM: Parsons Brinckerhoff (PB)

Authors: Pam Murray (PB), Lani Eggertsen-Goff (PB), Ron Clegg (PB)

Goals of the Public Information Meeting

- To inform the public of the study results, answer any questions and explain how their input was used and needed to identify issues along the corridor.
- To obtain a better understanding of the roadway users, local interest of the road, and future needs of the corridor.
- To discuss potential improvements for the roadway.
- To provide education about corridor planning in general and specifically how it applies to this study.
- To provide realistic next steps in the planning and the future construction process.

Meeting Description & Context

Lincoln County requested the public meetings have a formal presentation given by the project team. The County also recommended that a question and answer period be allowed to generate public participation and an informal open house could follow the question and answer period. The October 24th meeting followed the recommendations of Lincoln County. A PowerPoint presentation was provided by Ron Clegg at PB with an introduction provided by Shane Stack at MDT. A question and answer session followed the formal PowerPoint presentation. Then the public was invited to provide written comments on comment cards. This was the second and final public information meeting related to the Libby North Corridor Study. There were 31 people signed in and 1 written comment was received at the meeting. Several attendees stated that they liked what they saw at the meeting and they just wish it could happen sooner.

Meeting Location: The meeting was held October 24 from 6:30 p.m. to 8:30 p.m. at Libby City Hall in the Ponderosa Room, 952 E. Spruce Street.

Audience: Those in attendance included property owners along the corridor, business owners, residents of Libby, a representative from a special interest group and the media. Copies of the sign-in sheets are included in the appendix as part of the meeting notes.
Public Notification:
Letters were sent to property owners two weeks before the meeting. Additional notification was
given by MDT’s Public Involvement office in a state-wide press release, notification was posted
on the study website, and paid advertising was placed in the Montanian and The Western News:

- **The Montanian** is published once a week on Wednesdays: 3 advertisements ran –Wed. 
- **The Western News** – is published on Wednesdays and Fridays: 4 advertisements ran – 

A copy of the approved ad is in the appendix. Copies of the advertisements were cut from the
October 24 newspapers and are on file in the Libby North Corridor Study files at the PB office.

Meeting Format:
A thirty minute formal PowerPoint presentation was given by Ron Clegg (PB) with assistance
from Shane Stack, Lynn Zanto, and Jean Riley, all of MDT. Shane opened the meeting and
provided background to the project. A copy of the PowerPoint presentation is included in the
appendix of this memorandum. The PowerPoint served as a guide for discussion, to provide
information, and to stimulate public participation. The public provided comments and participated
in the discussion. Following the presentation, Ron opened the meeting to questions. A summary
of the questions and answers is below. The public was invited to provide their written comments
on the draft study. Project staff from both MDT and PB were available to answer questions and
assist with writing comments.

Handouts Include:
The handouts provided to the public at the meeting include the newsletter, a study area map, a
list of Frequently Asked Questions (FAQ) and comment forms.

Project Team attendees at the Meeting: Shane Stack (MDT), Lynn Zanto (MDT), Jean Riley
(MDT), Tom Kahle (MDT), Wayne Noem (MDT), Rita Windom (Lincoln County), Tom Grabinski
(USDA FS) Ron Clegg (PB), Lani Eggertsen-Goff (PB), and Pam Murray(PB).

Meeting Summary
31 people signed in and attended the meeting. Approximately 10 corridor property owners
attended with 14 other Libby residents and two members of the media. The other 4 attendees
were from Lincoln County and the Forest Service. Senator Aubyn Curtiss was also in
attendance. A total of 1 written comment form was turned in at the meeting. Copies of the sign
in sheet, comment and power-point presentation are in the appendix.

Shane Stack (MDT) opened the meeting and provided a background to the history of Hwy 567
Pipe Creek Road study. The need for improvement to the roadway was first identified by Lincoln
County through the County’s secondary roads nomination process. This nomination process is
how local governments make MDT aware of their priorities for local transportation improvements.
Originally, the Pipe Creek Road study of 2002 was proposed as a major project which anticipated
widening and reconstruction. That project proceeded forward in that direction and survey work
and initial environmental analysis was initiated. The project area that was considered for this
original project was from the Bobtail Cutoff Road, MP 6.1, to Loon Lake Road, MP 17.
During implementation of the project on Pipe Creek, a Court’s ruling of a lawsuit regarding the Rock Creek Mine in the Cabinet-Yaak area brought the Pipe Creek project to a stop. The reason for this is because the Court’s ruling indicated no additional loss of grizzly bears is acceptable in the Cabinet-Yaak ecosystem without placing the future existence of the grizzly bears in a precarious situation. Transportation projects shown to increase direct and indirect impacts to grizzly bears that could result in a grizzly loss have the potential to create a significant liability for the permitting agency. MDT evaluated the ruling and its impacts on Pipe Creek and decided not to proceed with the project as originally planned, but instead to step back and propose a planning study that would first identify the environmental, engineering and safety issues to determine if a project is feasible for the corridor. The result of the step back is the current planning study. This approach to the process includes meeting with the public, identifying issues and thoroughly identifying the significant environmental constraints prior to formal National Environmental Policy Act (NEPA)/ Montana Environmental Policy Act (MEPA) study or construction.

Shane provided a background of the current funding situation for Pipe Creek Road. He indicated that costs to complete an Environmental Impact Study (EIS) are increasing as well as construction costs but the pool the funding is not increasing to keep up with these costs. Total reconstruction of the roadway is very costly given the geotechnical issues, stream crossing, and the additional right of way that widening the road to 26 feet would require. The environmental issues associated with a full reconstruct would be very significant.

Ron told the audience that this public meeting is the final of two public meetings. The purpose of this meeting is to let the public know the results of the study and the next steps. Ron’s full presentation is provided in the Appendix and is also available for viewing electronically on a CD-ROM included in the appendix.

**Summary of Questions and Answers**
The following is a summary of the questions and answers and the discussion that followed the formal presentation.

Questions asked and comments offered by the Public:

- Comment: There are more and more motorcycles using this road.

- Question on projecting the costs into the future.
  - Followed up with explanation from Ron Clegg, Wayne Noem and Shane Stack.

- Question on why project is so far out in the future.
  - Ron and Shane explained funding and design process.

- Discussion on new pavement?
  - Shane explained that the pavement would likely be recycled and used as part of the new asphalt.

- What is the right of way throughout the corridor?
  - The project team discussed, with help from the Forest Service staff.

- What will the speed limit be?
  - 45 mph
Will there be delays to the traveling public due to construction?
  o There was discussion about how this would be handled and that roadway closures would be minimized whenever possible. However, due to the nature of this road some complete road closures during construction are possible.

Comment – construction on Highway 2 went well.

What is option or possibility of getting funding earlier?
  o MDT staff discussed options.

Comment on Roadway construction – Why no work permits from Forest Service after September 1st due to fish impacts? Discussion about environmental process and mitigation was briefly outlined.

Who will provide maintenance after construction?
  o The roadway will continue to be maintained as it is now; conjunction of County and Forest Service efforts depending on the season and issue.

Question about getting utilities into area?
  o Discussion that there was no plan for utilities in the near future and if the utilities come in after the road construction this would be better.

Senator Curtiss – Questions concerning R.S. 2477 and could the Forest Service withdraw the easement. These questions were answered completely in an email dated 11/21/2007:

Hello Senator Curtiss,
This email is follow up to our conversation last Friday, Nov 16, and also is in response to the email that Dick Turner of MDT received from Leanne Heisel.

“1. Is this road an RS 2477 road?” It is the understanding of MDT, the County, and Forest Service that this roadway, Highway 567 is not eligible as an R.S. 2477 claim. Revised Statute 2477, or R.S. 2477 as it is commonly known, dates from 1866 when it was included in the Mining Act of 1866. The statute was meant to facilitate western expansion. Its language is as follows: “The right-of-way for the construction of highways over public lands, not reserved for public uses, is hereby granted.” The Pipe Creek Road, or Highway 567, is an existing highway on Montana's Secondary Highway System that runs through mostly publicly owned (Forest Service) lands and MDT has no intention of closing the highway to public travel due to any provision of R.S. 2477.

2. Sen. Curtiss said she believes the state has an easement for this road over Forest Service land and she is wondering if the easement is in perpetuity -- she is concerned that all of this money will be spent and the Forest Service could at any time cancel the easement. MDT does not intend to ask the Forest Service to vacate the existing easements through Kootenai National Forest lands on which the Highway 567 roadway is built. If the Forest Service were to vacate the easement the traveling public would not be allowed to use the roadway, only Forest Service employees could. In place of vacating the easements, MDT plans to go through a process such as creating either a memorandum of understanding (MOU), or memorandum of agreement (MOA). The MOU or MOA would outline future use of the Highway as a Montana Secondary Highway which MDT will seek to obtain funding to maintain in perpetuity.

3. Sen. Curtiss said she has heard figures of the project costing $13.5 million and $20 million and she is wondering which is correct. The cost estimates for Option 6 of $15,500,000 and $20,700,000 are both detailed in the Libby North Corridor Study document available for review at http://www.mdt.mt.gov/pubinvolve/libby/. Costs in
2006 dollars are estimated at $15,500,000, and in 2012 at $20,730,000 (2012 costs include an estimated Indirect Cost Recovery (varies year to year) of 12% and 3% per year inflation).

4. Sen. Curtiss said she would like to know which projects are ahead of this one, priority-wise.” These are the order of Secondary Highway priorities in MDT’s Missoula District as of October, 2007:

Powell County Line North - Letting 2008
South of Polson South - Letting 2009
Blue Slide Road (two projects) - Lettings 2010 & 2011
Florence East - Letting 2012

Letting years beyond 2008 are tentative. All of these projects are further along in design than Pipe Creek Road Project. If there is a holdup in one of these projects then the next project would be moved forward for letting pending available funding in the next transportation bill. The next project for tentative letting is Pipe Creek Road in 2013 or 2014. Because of the potential delay in funding for the major improvements identified in the draft study, MDT is exploring options for phasing improvements.

Lani Eggertsen-Goff, M.S.

Could this be a Scenic Byway road?
  o Lynn Zanto discussed the fact that the State of Montana does have statutory authority for creation of Scenic Byways. However, there is no funding for Scenic Byway designations.

What is the typical right of way easement needed?
  o The roadway width varies but typically a secondary road will have a minimum right-of-way of 65 feet from centerline or 10 feet beyond construction limits.

Comments by the Public
The following comments were received on the study report as a result of the public meeting, from, written comments on the scroll plot map and comment cards received at the meeting and from comments received within the six week comment period that ended November 30, 2007.

“Just before RP 17 Grizzly bear have been seen in the summer and moose cross from before RP 18 all the way north.” This comment was taken off the scroll plot map at the public meeting.

“I feel in proposal #6, a 45 MPH posted speed is critical of safely driving in a 9’ driving lane when accepted log truck widths at 9’ (not withstanding frequent oversized hauling) would be dangerous. Not making the vertical improvements enhances the snaking of truck traffic. Would the 6” striping be that effective?”
Van Swearincen
"I would like to request that care be taken that the paved roadbed be graded so that existing dirt road entrances to neighborhood creek accesses be maintained and/or improved, rather than dropping off so much that vehicles are damaged, people try to reroute, and erosion gets bad.

Coming from Libby on Pipe Ck. Rd. (Hwy. 567) I. Swimming hole loop past mm 7 on left before the bridge over Pipe Ck. and before the campground (Timberlane)  

2. fishing access single entrance on right directly across from campground, past bridge. Drops off badly now and is showing sign of being rerouted. Spurs recently badly kelly humped/bermed by Forest Service.

3. Past mm.8 a former loop creek access, now kelly humped.
Off on the right. Exit about 3/4 mi. further up.

There are actual FS road numbers to these last two roads. I'll try to locate them as they don't show on the larger FS maps.
I've been trying to get the FS to reverse it's closure of these creek accesses for over 2 years, and I haven't given up yet."

Dianne Dunning

“(1) I suggest including a dedicated ‘air quality’ section to these corridor studies - even if there is not much to say. 
(2) Highway 567 project is located north of Libby, a current PM-10 and PM-2.5 nonattainment area. 
(3) Analysis of the project location indicates it is (or is just on the northern line) of the PM-2.5 nonattainment boundary. Therefore, federal transportation conformity requirements (40 CFR 93) do not apply.
(4) Recent technical studies indicate that PM-2.5 air pollution caused by re-entrained road dust or vehicle tailpipe emissions to be minor.
(5) Air pollution caused by construction activities is considered ‘temporary’. However, DEQ strongly encourages that project construction contracts include requirements for water trucks to reduce ambient levels of surface dust during operations. This also improves visibility to vehicular traffic.
(6) The Air Quality Rules of Montana (ARM) at 17.8.308 - Particulate Matter, Airborne requires ‘reasonable precautions’ to be taken such that emissions from shall not exhibit an opacity of 20% or greater averaged over 6 consecutive minutes. i.e. - use water trucks to keep dust down.
(7) The Cabinet Mountain Wilderness is in proximity to this project. However, road dust / vehicle exhaust is not considered to be a major contributor to regional haze visibility impairment.
(8) Increased lane width and paved shoulders will limit the amount of track-on / carry-on materials subject to re-entrainment. Paving major road entry ways will also reduce track-on / carry-on materials.
(9) Increased vehicle speeds / movements will reduce carbon monoxide (CO) tailpipe emissions - although CO emissions are not an issue within the project area.
(10) Reconstruction of this facility will not (likely) result in any population growth concerns that would increase area source emissions (woodstoves, road dust). The area is primarily federal land.

Thanks for the opportunity to review this corridor study.”

"As an impacted landowner, I strongly support the chosen option No. 6. MDT should make every effort to expedite this project. R/W acquisition will not be a problem from my perspective. My minor concerns in the area of MP 13 can be resolved during the design phase of this project. I stand ready and willing to help anyway possible to help this process along."

Libby North Corridor Study

Information

- Draft Libby North Corridor Study (LNCS) is available for public input.
- MDT’s study examined roadway deficiencies, design issues, financial feasibility, environmental issues, and capacity needs.
- Planning will prioritize the protection of environmental resources.

Schedule:
Step 1: Identified Issues; Jun-Aug. 2006
Step 2: Collected existing data and conducted field review; Aug-Oct. 2006
1st Public Information Meeting
Oct. 17 2006
Step 3: Drafted existing conditions report; Oct.-Nov 2006
Step 4: Identified potential improvement options; Nov-Jan 2007
Step 5: Drafted LNCS; April-Oct 2007
Final Public Information Meeting—to review LNCS; TODAY, Oct. 24, 2007
Step 6: Final LNCS; Dec 2007

We want to hear from you:
- Any issues, concerns and/or question you may have about this roadway
You can read a copy of the LNCS at one of these locations in Libby:
  - Reference Librarian’s Desk at Lincoln County Library, 220 W. 6th Street
  - Libby City Hall front desk 952 E. Spruce
  - Lincoln County Courthouse, 512 California Ave
Copies of the Draft Plan are also available at these locations:
  - Reference Librarian’s desk at Flathead County Library, 247 First Avenue East, Kalispell
  - MDT District office 2100 W Broadway, Missoula
  - www.mdt.gov/pubinvolve/libby

The Deadline for submitting comments is November 30, 2007

What is Corridor Planning?
- Inform the Environmental process
- Evaluate a broad range of planning–level environmental, social, economic & roadway issues
- Provide for early & continuous involvement of environmental, regulatory, resource agencies, local governments, and public
- List and prioritize future transportation improvements based on financial feasibility
- Identify low-cost corridor management strategies
- Reduce cost of environmental process & speed project delivery

What is the study area? (see map on the second page)
The study area encompasses the Hwy 567/Pipe Creek Road between Bobtail Cutoff road and Turner Mountain Road, approximately mile post 6.1 to 20.1.

What are the study findings?
The key findings are to improve safety conditions and decrease accidents, minimize impacts to the threatened and endangered species and maintain character of corridor. The range of options that were analyzed reflect what we learned about Hwy 567/Pipe Creek Road. To meet study goals six improvement options were analyzed. They include Improvement Option number:
  - 1 “Full Reconstruction”
  - 2 “Rehabilitation with minor widening to 24”
  - 3 “Rehabilitation with no minor widening”
  - 4 “Spot Improvements”
  - 5 “Snow Storage Option”
  - 6 “Rehabilitation with Minor Realignments”

The Draft LNCS Recommends Improvement Option 6, “Rehabilitation with Minor Realignments”. Highlights of this Improvement Option are:
  - Rehabilitation and with minor widening or narrowing adjustments to create consistent roadway width
  - Realign the road centerline to increase safety
  - Reduce impacts to the natural environment
  - Install warning signs, use 6” pavement striping to help reduce speeds
  - Flatten side slopes or install guardrail
  - Create a “V-ditch” to help with snow storage

How can the public/community contribute to the study?
Those with an interest in the project are encouraged to join the project mailing list and to make comments on the Draft LNCS. They can do so by submitting their name and contact information to Tom Kahle- MDT Project Manager phone (406) 444-9211 Email- tkahle@mt.gov, by calling the recorded comment line at (800) 714-7296, or completing the comment form available on the web site, www.mdt.gov/pubinvolve/libby
Next steps:
As the study is finalized and implementation of the study results are considered, the best way to stay involved is the website and join the project mailing list. The website address is www.mdt.gov/pubinvolve/libby
Once the study is completed the Direct Contacts will be:
- Wayne Noem, MDT Transportation Planning (406) 444-6109 or wnoem@mt.gov
- Shane Stack, MDT District Office (406) 523-5830 or sstack@mt.gov
September 27, 2007

Subject: Invitation to a public information meeting for HWY 567 (Pipe Creek Road) Libby North Corridor Planning Study

Dear «FIRST_NAME»

The Montana Department of Transportation cordially invites you to attend a public information meeting to discuss the findings of the Corridor Planning Study regarding 14 miles of Highway 567 also known as Pipe Creek Road north of Libby, beginning at milepost 6.1 (Bobtail Cutoff Road) and extending to milepost 20.10 (Turner Mountain Road). The doors will open at 6:30 pm with the presentation beginning at 7 pm on Wednesday, October 24, 2007, at the Ponderosa Room in City Hall, 952 E. Spruce Street, in Libby. The purpose of this meeting is to notify you of the study findings, and to outline the next steps of corridor improvement. Local residents in Libby and Yaak, along with property owners in the area, are all invited to provide their input.

The corridor planning process entails an assessment of the sensitive environmental surroundings as well as an evaluation of roadway deficiencies and conditions. Roadway conditions such as driver safety, pavement conditions, traffic volumes, and accidents rates were studied to help identify existing issues along the corridor. This study will also evaluate and recommend improvements if any are found to be needed. Your input helps to identify the problem areas and concerns.

Your comments and concerns are extremely important to us. We hope you will take this opportunity to attend the public information meeting in Libby. If you are unable to attend, please consider sending your written comments, opinions and concerns to: by mail to Tom Kahle, Project Manager, MDT Headquarters, PO Box 201001, Helena, MT 59620-1001 or online at www.mdt.mt.gov/mdt/comment_form.shtml. Please indicate comments are for Highway 567 Libby North Corridor Planning Study in Lincoln County.

MDT attempts to provide accommodations for any known disability that may interfere with a person’s participation in any service, program or activity of our department. If you require reasonable accommodations to participate in this meeting, please call Annell Fillinger, 406-458-9065 at least two days before the meeting. For the hearing impaired, the TTY number is (406) 444-7696 or 1-800-335-7592, or call Montana Relay at 711. Alternative accessible formats of pertinent information will be provided upon request.

Sincerely,

Ron Clegg

Libby North Corridor Study
Wednesday, October 24, 2007 - 6:30 pm
Ponderosa Room at the City Hall
952 E. Spruce Street, Libby

The purpose of this study is to evaluate the existing conditions and determine if transportation improvements are needed for HWY 567/Pipe Creek Road. The project limits are from Bobtail Cutoff Road to Turner Mountain Ski Resort.

MDT cordially invites the public to the results open house at 6:30 pm with a formal presentation at 7:00 pm. Q&A to follow.

MDT attempts to provide accommodations for any known disability that may interfere with a person’s participation in any department service, program or activity.

For reasonable accommodations to participate in this meeting, please contact Tom Kahle, MDT Project Manager, phone (406) 444-9211 at least three days before the meeting. For the hearing impaired, the TTY number is (406) 444-7696 or (800) 335-7592, or Montana Relay at 711. Alternative accessible formats of pertinent information will be provided upon request.

Comments may be submitted in writing at the meeting, by mail, by email, or online. The contact person is Tom Kahle, MDT Project Manager, phone (406) 444-9211; email: tKahle@mt.gov; mailing address: Tom Kahle, Transportation Planning, MDT Headquarters at PO 201001, Helena, MT 59620-1001.

To submit a comment online, go to http://www.mdt.mt.gov/mdt/comment_form.shtml?project=LibbyCorridorProject. Please indicate comments are for North Libby Corridor Study.
FOR IMMEDIATE RELEASE

Meeting slated to discuss corridor planning study – Highway 567 in Lincoln County

The Montana Department of Transportation (MDT) is conducting a public meeting to discuss the findings of the Corridor Planning Study regarding 14 miles of Highway 567 also known as Pipe Creek Road north of Libby, beginning at milepost 6.1 (Bobtail Cutoff Road) and extending to milepost 20.10 (Turner Mountain Road). The doors will open at 6:30 pm with the presentation beginning at 7 pm on Wednesday, October 24, 2007, at the Ponderosa Room in City Hall, 952 E. Spruce Street in Libby.

This public meeting will kick off a 30-day public comment period that will end November 30, 2007. Copies of the final report can be found on the study website http://www.mdt.mt.gov/pubinvolve/libby/ at the Reference Librarian’s Desk at Lincoln County Library, 220 W. 6th Street in Libby, at Libby City Hall front desk 952 E. Spruce, at the Reference Librarian’s desk at Flathead County Library Kalispell, 247 First Avenue East, at the MDT District office Missoula, 2100 W Broadway, and at the Lincoln County Courthouse, 512 California Ave in Libby.

Continued community participation is a very important part of the process, and the public is encouraged to attend. Opinion and comments may also be submitted in writing at the meeting, by mail to Tom Kahle, Project Manager, MDT Headquarters, P. O. Box 201001, Helena, MT 59620-1001 or online at www.mdt.mt.gov/mdt/comment_form.shtml Please indicate comments are for Highway 567 Study in Lincoln County.

The purpose of this study is to evaluate the existing roadway conditions and safety, and determine if improvements are needed for HWY 567 (Pipe Creek Road). The planning process considers the needs of local residents and property owners in Libby and Yaak, as well as, the traveling public. Part of the planning process entails the following: assessment of the sensitive environmental surroundings of the road, current and future traffic volumes and speed, current roadway condition, wildlife crossings, and user safety. The study findings will be presented at the meeting and there will be a review of the feasible roadway improvements, if any, that may be needed in the future.

MDT attempts to provide accommodations for any known disability that may interfere with a person’s participation in any service, program or activity of our department. If you require reasonable accommodations to participate in this meeting, please call Tom Kahle at (406) 444-9211 at least three days before the meeting. For the hearing impaired, the TTY number is (406) 444-7696 or 1-800-335-7592, or call Montana Relay at 711. Alternative accessible formats of pertinent information will be provided upon request.

--------------------------------------------------------------------------------END--------------------------------------------------------------------------------
