Tips for Bicyclists

Bicyclists must follow all traffic rules, including stopping at signals and stop signs.

Stay Visible

Use a front light and rear reflector or rear light when riding at night. Increase visibility by wearing bright colors.

Out for a Ride?

Stay on top of road incidents, road conditions, construction, and project details right from your phone!

Planning a Bike Trip?

Check out MDT’s Bike & Pedestrian website for events, touring information, safety tips, and other important information for your trip!

This map illustrates traffic volume for general reference only. These are not exact numbers but estimated averages of what may be encountered along that segment of roadway. Construction detours and similar events may increase or decrease the number of vehicles along a segment.

There are two numbers for each road segment. The larger (red) number is the average July daily traffic volume for all classes of vehicles passing on that segment of roadway. The smaller (black) number is the average July daily commercial truck volume on that segment of roadway.

The shoulder width indicated is the width of the pavement outside the fog line on the paved roadway. Traffic may contain a rumble strip. On divided highways, they are typically installed on the median side (left shoulder) of the roadway as well as on the opposite outside (right) shoulder.

Prevailing winds for Montana are generally west to east and can be 10-50 miles per hour in the plains region.

For current road conditions and construction zones, dial 511 in Montana, or 1-800-226-7823.
