

I'm Rich Davison, I'm a photogrammetrist with the Engineering Division of MDT.

I enjoy working for MDT because there is always something new to learn which is important to keep you interested in your job. I have worked here for nearly 17 years and every project has been different and challenging. Along with the new technology that occurs quite often it has kept my job pretty interesting. A typical day may consist of flight planning for an aerial mission, checking for quality control of the aerial images, scanning images, mapping photogrammetric images, researching new technologies that may benefit this unit in the years to come. I chose to work at MDT because I learned that they had a good photogrammetry department and once I got here I realized that was true and the management in this unit is committed to a quality product which is important to me. If a person is interested in photogrammetry a BA in Geography with an emphasis in photogrammetry or cartography would be very helpful.

I'm Rich Davison and I'm MDT.
