SURVEY DATABASE “WARNING FOR HYBRID MODE”

ISSUE:

A “Warning for hybrid mode” is encountered when setting the survey database path to the project directory (**right-click > Set working folder...**). Furthermore, using the “Set All Default Paths” option resets Survey User Settings.

SOLUTION:

Choosing **Ignore** on the Warning for hybrid mode will leave Survey User Settings and settings for any survey databases already created intact. Equipment database, linework code sets, figure prefix database, and report style paths will remain defaulted to the desired locations for MDT processes.

Choosing **Open Settings** will allow you to review the Survey User Settings causing no issues if making no additional changes.

PROCEDURE:

- 1) From the **TOOLSPACE SURVEY** tab, *right click* **SURVEY DATABASES** and choose **SET WORKING FOLDER....**
- 2) *Navigate* to the appropriate project directory for saving/editing survey databases then choose **SELECT FOLDER.**
- 3) From the “Warning for hybrid mode” dialog, choose **IGNORE.**

Note: If “Set All Default Paths...” was chosen, settings can be restored by using the **REMOVE CURRENT PROFILE** tool on the **MDT TOOLS** ribbon and then relaunching Civil 3D 20XX Montana.
