STATE OF MONTANA
JOB DESCRIPTION

Montana state government is an equal opportunity employer. The State shall, upon request, provide reasonable accommodations to otherwise qualified individuals with disabilities.

Job Title: Steel Fabrication Specialist   Position Number: 54150047   Location: Helena

Department: Transportation   Division and Bureau: Engineering/Materials

Section and Unit: Physical Testing/Quality Control

Job Overview: This position is the Steel Materials Compliance Specialist for MDT. Duties include establishing and implementing steel materials inspection requirements; designing and performing or directing the performance of nondestructive testing; and developing and managing MDT’s steel fabrications and inspection certification program. The position reports to the Quality Control Supervisor and does not supervise others.

Essential Functions (Major Duties or Responsibilities):

Quality Engineering and Inspection Project Management - 60%

This position is responsible for establishing and documenting inspection requirements and procedures; ensuring all quality assurance requirements are incorporated in inspection and testing procedures; directing or performing inspection of fabrication operations; and reviewing reports to ensure activities meet quality assurance requirements.

- Establish and implement steel materials inspection requirements to ensure compliance with applicable state and federal standards for materials quality and placement. This is accomplished through the development of quality assurance procedures, review and evaluation of past and current inspection and testing reports and determining the viability of the entire quality assurance process.
- Reviewing inspection and testing instructions to ensure necessary quality assurance requirements are incorporated.
- Developing and implementing annual materials inspection and testing plans to ensure steel materials are inspected according to state and federal requirements. The position must then carry out determined priorities and develop plans that can adjust to a variety of contingencies.
- Monitoring compliance with established operational policies and procedures and achievement of steel materials inspection goals by meeting with district and headquarters staff and personal review of project reports as well as review and approval of atypical or developmental methods and procedures.
- Determining the need for and overseeing the development, negotiation, and monitoring of fabrication inspection contracts with approved and qualified contractors.
- Scheduling and facilitating meetings between MDT staff, contracted inspection agents, and materials fabricators to inform those agents and fabricators of MDT requirements regarding inspection methods, documentation, quality control, and appearance of the final product.
• Providing oversight and direction in the fabrication and inspection of all structural steel used in bridge projects and miscellaneous steel to ensure quality assurance requirements and materials specifications are met.

• Ensuring that all fabrication work is within tolerances and specifications by interpreting and applying materials codes. The position may personally perform inspection when fabrication agencies are unavailable or when specialized expertise is required. The position may also perform spot inspections to ensure fabrication facility staff are properly certified and are using the appropriate materials.

• Observing fabrication processes to ensure quality and compliance with project specifications and approved shop drawings.

• Developing and providing training on inspection and testing standards; documentation requirements; policy interpretations; and related information for MDT bridge inspectors and contracted fabrication inspectors.

Certification Program Management - 20%

Develop and manage MDT's bridge fabrication and inspection certification program to ensure individuals performing work on MDT bridge projects are properly trained and competent to perform structural work. The position is responsible for establishing agency certification requirements; approving individuals as qualified to perform work for MDT and tracking their certifications; and conducting site inspections to ensure work is performed by certified personnel.

• Establishing and documenting MDT requirements for qualification and certification to work on bridge and related projects

• Developing informational materials, certification documentation requirements, and other guidelines to inform affected businesses of MDT certification and experience requirements; and providing technical assistance and direction to contractors, fabrication facilities and others in the appropriate requirements to attain and maintain status as a qualified contractor with MDT.

• Qualifying welders working for and contracted by MDT.

• Maintaining and tracking the database of approved qualified inspectors, welders and other positions.

• Conducting on-site inspections of contractors doing business with MDT to ensure compliance with program requirements.

Bridge Materials Testing - 15%

Design and perform or direct the performance of non-destructive testing on bridges to ensure bridge safety; assess material quality; and identify any necessary repairs, modifications or replacements to bring bridges into compliance with state and federal standards.

• Analyzing structural characteristics; materials inspection requirements; damage and maintenance reports; and construction plans to determine the appropriate inspection plan for individual structures. There are a wide range of non-destructive tests available, and the position must develop customized approaches to ensure quality assurance and testing requirements are properly applied to a variety of structures. The position must develop unique design construction criteria and repair procedures for contracts based on structure type.

• Performing or directing the performance of specialized non-destructive test procedures on structures. Advanced testing methods include magnetic particle, ultrasonic, dye penetration, and radiographic inspection.

• Interpreting results of testing to determine the soundness of materials and structures. The position will be responsible for working closely with and providing direction to bridge inspectors. In consultation and coordination with Bridge Structural Engineers (MDT or Consultant), the position
will determine if cracks or other structural flaws are significant enough to affect safety and may suspend projects or restrict or eliminate traffic loads until the flaw can be corrected.

- Determining necessary materials changes or field modifications to attain compliance; communicating this information to project managers and contractors; and providing technical assistance and interpretation of materials specifications.
- Ensuring proper quality assurance and safety protocols are followed. The position must pay close attention to radiographic processes that involve live isotopes to ensure personnel are not exposed to radiation and that the safety of the public is protected. This includes ensuring technicians are trained and certified to use hazardous materials and providing direct oversight to inspection processes.

Other Duties as Assigned - 5%

Perform a variety of other professional and technical work to support MDT’s mission. This includes directing special projects; providing assistance and expertise in non-destructive testing to other MDT work units and contracts; attending meetings and conferences; and attending continuing education and training.

Supervision
The number of employees supervised is: 0

Physical and Environmental Demands:
- Ability to lift 80 pounds repeatedly (carrying equipment and samples)
- Climbing and bending to retrieve samples
- Exposure to extreme weather and temperature
- Exposure to caustic fumes, dust, and noise
- Exposure to high temperature material (sparks, slag, asphalt)
- Work with radioactive isotopes (non-destructive radiographic testing)
- Operation of gas, diesel, and electric equipment
- Extensive statewide travel (25-50% estimated)

Knowledge, Skills and Abilities (Behaviors):

KNOWLEDGE:
The position requires an advanced knowledge of the principles and practices of construction, non-destructive steel materials inspection and testing, structural welding, program administration, and compliance enforcement.

The work also requires advanced knowledge of properties and characteristics of a variety of materials; laboratory and field testing protocols and procedures; state, federal, AASHTO, FHWA, ASNT and ASTM standards and project specifications; the Montana Bridge and Materials Manuals, structural construction methods and techniques; a variety of site specific circumstances and their impacts (soils, temperature, weather conditions, etc.); safety practices and procedures; and on the job training methods and techniques. The work requires an advanced knowledge of the principles and practices of non-destructive bridge materials inspection and testing. This work requires an advanced knowledge of the principles and practices of program management, compliance enforcement, structural welding, American Welding Society (AWS), and Certified Welding Inspector (CWI) program requirements.

SKILLS:
The position requires skill in management; graphic representation tools; computer data collection; and the operation of inspection and testing equipment (including magnetic particle, ultrasonic, dye penetration and radiographic equipment.)
BEHAVIORS:
Planning; organization; establishing and maintaining effective working relationships; engineering judgment and analysis; communication; time management; promptness; accuracy; and precision

Minimum Qualifications (Education and Experience):

The required knowledge and skills are typically acquired through a combination of education and experience equivalent to an Associate’s Degree in Construction Technology, Welding Technology, or Non-Destructive Testing, or a related field such as Structural, Civil, Metallurgical, or Welding Engineering.

This position requires a minimum of 4 years of work-related experience.

Certifications, licensure, or other credentials include: AWS Welding Inspector Certification with structural welding and ASNT QC-1 in ultrasonic, magnetic particle, radiographic, and dye penetrant inspection. This position requires current CWI certification.

Alternative qualifications include: Any combination of additional related work experience and education equivalent to the minimum qualifications.

This position requires advanced knowledge of welding, fabrication, steel and non-destructive testing. Candidates with various combinations of education, training, and/or work experience may be considered, and any combinations may be considered, with the objective being that at least 6 years of directly related experience, education, or training would be required to meet the minimum job qualifications. Indirectly related experience may also be considered but will have to be evaluated on its individual merits in relation to the job duties and responsibilities.

Special Requirements:
Actions and decisions directly affect MDT’s compliance with state and federal materials specifications and other regulations, along with the quality and safety of all steel structures in the state. The position is responsible for establishing, implementing, and monitoring the policies and procedures for steel materials and other non-destructive testing throughout the state. The position directs the construction welding certification program to ensure that MDT and contracted staff are qualified to carry out bridge inspection and testing work. Information provided to the FHWA by this position provides the foundation to determine the allocation of federal funding to bridge projects throughout the state. Proper detection and correction of structural flaws is critical to protecting the life and safety of the traveling public. The position is responsible for ensuring proper quality assurance and safety protocols are followed by MDT and contracted employees.
