There have been some questions about what length should be shown for Urban Roadway in the Linear Data. Length of Urban Roadway should only be shown for the portion of a project within the urban limits of the 15 cities with designated urbanized areas. The linear data is used for tracking expenditures on urban routes which only exist in these 15 cities. These cities are:

Anaconda                Kalispell  
Belgrade                 Laurel     
Billings                Lewistown  
Bozeman                 Livingston  
Butte                    Miles City 
Great Falls             Missoula   
Havre                    Whitefish  
Helena

No Urban Roadway length should be shown for any other locations, regardless of whether or not an urban design is done (and is appropriate). If you have any questions please contact me.

Thanks, pf
