Transportation-Related Customized Google Searches

A customized Google search functions like a regular Google search, except that it’s limited or customized to search only specific websites. Instead of pulling results for you from the entire web, Google will provide results just from those websites. This saves you the time of having to sort through hundreds of un-related Google results. The following are some customized Google searches related to transportation:

- **State DOT Search Engine** (also accessible via MDT’s Library page)
- **Transportation (General)**
- **Transportation Research Needs**
- **University Transportation Centers**
- **LTAP Center Search**
- **Metropolitan Planning Organizations**
- **Public Transit Agencies**
- **State Public Utilities Commissions**
